FUND MANAGER'S COMMENTS

- In October, global external noise continued to persist mainly driven by high level of inflation in the US and Europe. US CPI headline numbers remained high rose +8.2% y-o-y in September (core figures continued to surprise at +6.6% y-o-y in September on the back of higher core services inflation, reflecting rising rents and labor market tightness.
- Since the hike in September's FOMC meeting, the market consensus is expecting another 75bps hike in the upcoming meeting in November, suggesting another 125-150bps for 2022 which will take the FFR range to 4.50%-4.75%. Fed started QT2.0 with a monthly balance sheet runoff of USD47.5b until August 2022 before doubling the pace to USD95b from September 2022.
- UST yield curve continue to rise and remain inverted on the back of US Fed aggressive rate hike policy to reduce the high level of inflation. UST yields moved higher on m-o-m basis across the curve. The long end shifted the less, reflecting expectations on slower growth in the future. UST10Y ended higher at 4.05%, an increase of 22bps from the previous month, amidst elevated level of inflation and tight job market. The UST 2Y/10Y inversion was flat at 44bps, reflecting a higher possibility of a recession.
- After the sell-off in the previous month, MGS yields saw a relief in October as longer-tenured yields fell amidst possibility of central banks slowed down their pace of rates hiking. Headline inflation tapered off to +4.5% in September, suggesting the headline inflation has likely peaked. However, the core CPI figures continued to tick higher at +4.0% amidst elevated commodity prices, strong demand and tight labor markets. Due to the elevated inflation level and strong economic growth, BNM raised rates by 25 bps in the OPR rate to bring it to 2.75% by year end.

STRATEGY:

- The Fed's tightening and withdrawal of liquidity continued to be the key headwinds in the near term. The Fed is looking to continue hiking interest rates as long as headline inflation remains elevated. Bond yields have priced in substantial hikes and there are signs that inflation is peaking.
- Stimulus measures in the Chinese property sector have yet to stabilize the physical market. Furthermore, China's Zero Covid policy and slowing global growth add to the uncertainty of global growth recovery.
- Cash level was reduced to around 9%, though the Fund intends to stay defensive. Duration positioning remains short at around 4.2 years amidst prevailing uncertainties and market volatility. The current fixed income yield is at 7.8%.
- Valuations are attractive but maintain defensive stance as yields could continue rising in near term due to hawkish central banks. Look to gradually nibble into good quality Investment Grade names offering good carry while maintaining high cash level in this volatile period.

RISKS

All investment carries some form of risks. The potential key risks include but are not limited to the following:

Market risk	Market risk refers to the possibility that an investment will lose value because of a general decline in financial markets, due to economic, political and/or other factors, which will result in a decline in the target fund's NAV.
Liquidity risk	Liquidity risk refers to two scenarios. The first scenario is where an investment cannot be sold due to unavailability of a buyer for that investment. The second scenario exists where the investment, by its nature, is thinly traded. This will have the effect of causing the investment to be sold below its fair value which would adversely affect the NAV of the target fund.
Credit and default risk	Credit risk relates to the credit worthiness of the issuers of the bonds or money market instruments ("Investment") and their expected ability to make timely payment of interest and/or principal. Any adverse situations faced by the issuer may impact the value as well as liquidity of the Investment. In the case of rated investment, this may lead to a credit downgrade. Default risk relates to the risk of an issuer of the Investment either defaulting on payments or failing to make payments in a timely manner which will in turn adversely affect the value of the Investment. This could adversely affect the value of the target fund.
Interest rate risk	This risk refers to the impact of interest rate changes on the valuation of bonds or money market instruments ("Investment"). When interest rates rise, the investment prices generally decline and this may lower the market value of the Investment. The reverse may apply when interest rates fall.
Currency risk	<p>As the Investments of the target fund may be denominated in currencies other than the base currency, any fluctuation in the exchange rate between the base currency and the currencies in which the investments are denominated may have an impact on the value of these investments. Investors should note that any gains or losses arising from the fluctuation in the exchange rate may further increase or decrease the returns of the investment.</p> <p><u>Currency risk at the target fund level</u> The impact of the exchange rate movement between the base currency of the target fund and the currency of the underlying investments may result in a depreciation of the value of the investments as expressed in the base currency of the target fund.</p>

RISKS

All investment carries some form of risks. The potential key risks include but are not limited to the following:

Structured products risk

The NAV of the target fund will be impacted by the valuation of the structured product. Factors that may impact the valuation of the structured products will include, but not be limited to movement of the underlying assets, volatility of the underlying assets, interest rate levels, the correlation of the underlying assets and other such factors. Any change in the aforesaid factors would either positively or negatively impact the valuation of the structured products, hence impacting the NAV of the target fund. As such, the target fund's NAV will be exposed to potential price volatility, which will be dependent on the valuation of the structured products that the target fund invested in.

Country risk

Investments of the target fund in any country may be affected by changes in economic and political climate, restriction on currency repatriation or other developments in the law or regulations of the countries in which the target fund invests. For example, the deteriorating economic condition of such countries may adversely affect the value of the investments undertaken by the target fund in those affected countries. This in turn may cause the NAV of the target fund or prices of units to fall.

Regulatory risk

The investments of the target fund would be exposed to changes in the laws and regulations in the countries the target fund is invested in. These regulatory changes pose a risk to the target fund as it may materially impact the investments of the target fund. In an effort to manage and mitigate such risk, the fund manager seeks to continuously keep abreast of regulatory developments (for example, by closely monitoring announcements on regulators' website and mainstream media) in that country. The fund manager may dispose its investments in that particular country should the regulatory changes adversely impact the investors' interest or diminish returns to the target fund.
