FUND MANAGER'S COMMENTS

In July 2024, the Fund's performance increased by 1.51%, outperforming the benchmark by 0.09%.

KLCI rose 2.2% in July in line with gains in regional markets and rebounding off the previous month's sell-off, spurred by FOMC fed cut bets considering the recent weakness in US economic data and inflation moderating. Gainers were led by Banks, Utilities, Telcos, and Consumer, while Materials languished. Within the broader market, Construction and Property posted strong gains, while Tech and Healthcare yielded.

Malaysia's July manufacturing PMI reading fell to the lowest in 3 months at 49.7pts vs 49.9pts in June. S&P Global witnessed a moderation in output and new orders, albeit only slight, and stemmed mainly from domestic front. Export orders rose for the 4th consecutive month and at the fastest pace since April 2021. Manufacturers also cited an increase in backlogs. Inflation was prevalent but firms were able to pass it on, while there was some job shedding as firms noted non-replacement of voluntary leavers. Firms remained cautious and scaled back purchases as well as inventories, but business confidence has started to turn up. The latest PMI data remains consistent with official GDP estimates. To recap, BNM projects GDP to grow 4-5% in 2024, from 3.8% in 2023, and 4.2% in 1Q24. Advanced estimates placed Malaysia's GDP growth at 5.8% for 2Q24 vs 4.4% estimate by economists.

The Malaysian Government Securities ("MGS") yield curve bull steepened in the month of July which saw yield for the 3- to 15-year falling between 12bps to 15bps while the 20-year and 30-year tightened 8bps and 5bps respectively. The MGS curve moved in tandem with the movements of US Treasuries as it moved lower fueled by signs of inflation moderating, thereby prompting market expectations of US Federal Reserve (Fed) rate cuts. The 3-, 5-, 7-, 10-, 15-, 20- and 30-year MGS benchmarks closed at 3.38% (-15bps), 3.52% (-13bps), 3.68% (-12bps), 3.74% (-14bps), 3.88% (-13bps), 4.04% (-8bps) and 4.17% (-5bps), respectively in July.

Like the MGS curve, the Government Investment Issue ("MGII") yield curve also bull steepened with yields on the 3-year to 15-year falling between 9bps to 17bps. The 10-year MGII fell 17bps the most during month which could be due to strong demand driven by month-end portfolio rebalancing.

The 3-, 5-, 7-, 10-, 15-, 20- and 30-year MGII closed at 3.41% (-11bps), 3.56% (-11bps), 3.69% (-9bps), 3.72% (-17bps), 3.91% (-10bps), 4.06% (-8bps), and 4.18% (-6bps) respectively in July.

Bank Negara Malaysia (BNM) kept the Overnight Policy Rate (OPR) at 3.00% for the seventh consecutive Monetary Policy Committee (MPC) meeting on 10-11 July 2024 amid "hold-for-longer" US Fed policy rates, as well as firmer economic growth, upside risk to domestic inflation and stable Ringgit.

## RISKS

All investment carries some form of risks. The potential key risks include but are not limited to the following:

<b>Market risk</b>	<p>Market risk is the risk of negative movement that affects the price of all assets in a particular capital market. The factors influencing the performance of the markets include:</p> <ul style="list-style-type: none"><li>• Economic and financial market conditions</li><li>• Political change</li><li>• Broad investor sentiment</li><li>• Movements in interest rate and inflation</li><li>• Currency risks</li></ul> <p>Stock and/or securities values fluctuate in response to the activities and performance of individual companies and general market or economic conditions. Such movements in the underlying values of the share of the investment portfolio will cause the NAV or prices of units to fall as well as rise. Market risk is mitigated through careful selection of securities and diversification through spreading of risk across a basket of assets and/or sectors.</p>
<b>Interest rate risk</b>	<p>Interest rates are inclined to fluctuate over time. A rise in the general level of interest rates will result in a decline of the value of all bonds and fixed interest securities. Hence a bond fund's NAV will most probably decrease with the rise of interest rates. Maintaining an appropriate diverse mix of assets with different yield and maturity profiles will lessen the impact of interest rate risk.</p>
<b>Liquidity risk</b>	<p>Liquidity risk is defined as the ease with which a security can be sold at or near its fair value depending on the volumes traded on the market. Liquidity risk is mitigated through the selection of stocks with an active trading volume in the open market. This ensures that exit strategies can be executed with little/minimal impacts to price fluctuations.</p>
<b>Company or security specific risk</b>	<p>There are many specific risks, which apply to individual companies or securities. Examples include the possible effect on a company of losing a key executive or the unforeseen entry of a new competitor into the market. The risk is mitigated by conducting in-house periodic reviews and analysis. In-house analysis is then supplemented by periodic reviews from rating agencies and market analysts.</p>
<b>Credit risk</b>	<p>Credit risk refers to an issuer's ability to make timely payments of profit and principal. In the event that the issuer of the instrument is faced with financial difficulties, leading to a decrease in their credit worthiness (i.e Bond prices will change/drop in the event of rating downgrade) and default in the payment of profit and principal, the value of the fund may be adversely affected. Credit risk is mitigated by conducting in-house periodic reviews and analysis. In-house analysis is then supplemented by periodic reviews from rating agencies and market analysts.</p>
