FUND MANAGER'S COMMENTS

- US equities surged in July bolstered by dovish comments from the US Federal Reserve and a stellar set of earnings results that boosted sentiment. The S&P 500 index climbed 9.1% as the Fed delivers on a widely expected 75 bps interest rate hike at its FOMC meeting last month.
- The FBM100 index ended the month 3.0% higher as sentiment improved on the back of expectations that the Fed is approaching a peak in its tightening cycle.
- The government has said that it would be reviewing the implementation of various development projects which have yet to commence under the 12th Malaysia Plan to save on public expenditure. Projects that are already in an advanced stage will proceed as planned.
- Other cost-cutting measures by the government include plans to implement a targeted subsidy system which covers both food and fuel. Any targeted subsidy system will be implemented in phases, according to Finance Ministry.
- BNM maintained its growth outlook for 2022 at 5.3-6.3% with risk to the upside, reiterating any changes in monetary policy to be gradual and accommodative. The domestic labour market remains strong with unemployment rate of 3.9% in May vs. pandemic peak of 5.3%.

STRATEGY:

- The fund's invested levels was maintained at around 75% during the month. The fund remains positioned in quality large-cap Shariah-compliant stocks in the domestic market.
- Domestic equities saw a small relief rally as the US Federal Reserves was less hawkish. Meanwhile, falling commodity prices should ease pressure on inflation. We will be monitoring the next set of inflation data before further deploying cash.
- Domestic fundamentals remain strong with expectations that Q2 2022 earnings season would be positive underpinned by border reopening. As such, we favor reopening beneficiaries such as the aviation, tourism and consumer sector which benefits from the firm transition to an endemic phase.
- We are positive on banks, which is a clear beneficiary of economic growth, coupled with strong outlook on loan growth and asset quality. We also like technology companies, where we see value emerging after the recent heavy selloff, and which has strong earnings visibility driven by secular growth trends (e.g. 5G, EV, solar energy).

RISKS

All investment carries some form of risks. The potential key risks include but are not limited to the following:

Market risk	Market risk arises because of factors that affect the entire marketplace. Factors such as economic growth, political stability and social environment are some examples of conditions that have an impact on businesses, whether positive or negative. Market risk cannot be eliminated by diversification. It stems from the fact that there are economy-wide perils which threaten all businesses. Hence, investors will be exposed to market uncertainties and no matter how many Shariah-compliant securities are held, fluctuations in the economic, political and social environment will affect the market price of the Shariah-compliant investments either in a positive or negative way.
Fund management risk	This risk refers to the day-to-day management of the target fund by Affin Hwang which will impact the performance of the target fund. For example, investment decisions undertaken by Affin Hwang as a result of an incorrect view of the market or any non-compliance with internal policies, investment mandate, the deed, relevant law or guidelines due to factors such as human error, fraudulence, dishonesty or weaknesses in operational process and systems, may adversely affect the performance of the target fund.
Performance risk	There is no guarantee in relation to the investment returns.
Inflation risk	This is the risk that your investment in the target fund may not grow or generate income at a rate that keeps pace with inflation. This would reduce your purchasing power even though the value of the investment in monetary terms has increased.
Liquidity risk	Liquidity risk arises in two scenarios. The first scenario is where the target fund's investment cannot be sold due to unavailability of a buyer for that investment. The second scenario exists where the target fund's investment, by its nature, is thinly traded. This will have the effect of causing the target fund's investment to be sold below its fair value which would adversely affect the NAV of the target fund.
Credit/Default risk	Credit risk relates to the creditworthiness of the issuers of the investment (Islamic money market instruments) and their expected ability to make timely payment of interest and/or principal. Any adverse situations faced by the issuers may impact the value as well as liquidity of the investment. In the case of rated investments, this may lead to a credit downgrade. Default risk relates to the risk of an issuer of the investment either defaulting on payments or failing to make payments in a timely manner which will in turn adversely affect the value of the investment. This could adversely affect the value of the target fund.
Equity investment risk	This is the risk associated with investing in a particular equity. The value of individual equity is mainly determined by its potential growth in earnings, sound management, and treatment of minority shareholders, as well as a myriad of other factors. Failure to achieve these would result in declining investment value which in turn affects the performance of the target fund. This can be mitigated by diversifying the target fund's portfolios.

RISKS (CONTINUED)

Reclassification of Shariah status risk

This risk refers to the risk that the currently held Shariah-compliant securities by the target fund may be reclassified to be Shariah non-compliant in the periodic review of the equities by the Shariah Advisory Council of the Securities Commission Malaysia (SACSC), the Shariah Adviser for the target fund or the Shariah boards of the relevant Islamic indices.

If this occurs, Affin Hwang will take the necessary steps to dispose of such equities. There may be opportunity loss to the target fund due to the target fund not being allowed to retain the excess capital gains derived from the disposal of the Shariah non-compliant equities. Affin Hwang will be required to dispose of these equities immediately if the prices are above the purchase price. Should the prices be below the purchase price, Affin Hwang may choose to hold on to these holdings until the prices meet the purchase price. Nevertheless, should Affin Hwang decide to dispose of these equities below the purchase price, the target fund will be faced with the risk of realising its losses, thus negatively impacting the NAV of the target fund.

Shariah-compliant warrants investment risk

The value of the Shariah-compliant warrants (“warrants”) will depend on the pricing of the underlying security whereby the growth and performance prospect of the underlying security would consequentially affect the value of the warrants. In addition, the value of the warrants may decrease exponentially as the warrants approach its maturity date and the potential gains from a favourable price movement of the underlying security may be offset by aggressive time decay. Affin Hwang may consider unwinding these warrants if there are material adverse changes to its value with the aim to mitigate the risk.
