FUND MANAGER'S COMMENTS

In December 2020, the Fund's performance increased by 2.87%, outperforming the benchmark by 0.12%.

The FTSE Bursa Malaysia Composite Index ("KLCI") ended the month higher by 4.13% MoM and the year by 2.42%. Positive sentiments from successful COVID-19 vaccines testing spillover to December. Sector wise, Energy +11.1%, Finance +11.0%, Industrial +10.9% and Property +10.6% were the top performers for the month, while PMAH +20.0%, CIMB +18.5%, PBK +18.4% and PCHEM+15.7% were the top performing stocks.

The KLCI posted a second consecutive month of gains as investors continued to position into the Covid-19 recovery play in the market, following news of Covid-19 vaccine breakthroughs in November. On top of that, the Ministry of Health (MOH) announced that it has revised the quarantine period from two weeks to 10 days for all travelers and close contacts of COVID-19 positive patients. On the budget front, the opposition failed in its attempt to thwart Budget 2021 as it was passed in the final approval stage in the Dewan Rakyat today via an en bloc vote. The vote ended with 111 Members of Parliament (MPs) in favour and 108 MPs against the passing of the budget. Despite the downgrade in rating by Fitch from 'A-' to 'BBB+', Malaysian Ringgit and bond yield remained stable. To end the year 2020 on a positive note, the Ministry of Finance announced the extension of the vehicle sales tax exemption period, due to expire on 31 December, by a further six months until 30 June 2021.

There were only a handful of domestic economic data released in December 2020. Industrial production dropped 0.5% YoY in October-2020, swinging from September's +1.0% YoY increase and contracting for the first time in four months. October's downturn was largely attributed to a stronger decline in mining and quarrying output, largely due to the reimplementing of CMCO in most of the states since early October. Consumer Price Index continued to slip for the 9th consecutive month in November-2020 to -1.7% YoY mainly attributed to the decrease in transportation (-11%) and utilities (-3%). Soft inflation continues to provide support for low bond yield which is crucial for 2021 economic recovery. Lastly, trade surplus in November-2020 surged to RM16.8bn as exports rose by 4.3% YoY, while imports dropped by 9.3% YoY. The better export performance for the month was supported mainly by higher exports to US, Singapore, China and Hong Kong (Electrical and Electronic products). Despite with the revised Budget 2021, the official fiscal deficit target from MoF was unchanged at -5.4% for 2021. Based on our forecast, that should translate to around RM160bn of gross funding requirement. The 37 government bond auctions in 2021 will see higher frequency of issuance in the 3y – 5y bucket but we expect the actual amount supply to come in the 7y – 10y bucket.

RISKS

All investment carries some form of risks. The potential key risks include but are not limited to the following:

<p>Market risk</p>	<p>Market risk is the risk of negative movement that affects the price of all assets in a particular capital market. The factors influencing the performance of the markets include:</p> <ul style="list-style-type: none"> • Economic and financial market conditions • Political change • Broad investor sentiment • Movements in interest rate and inflation • Currency risks <p>Stock values fluctuate in response to the activities and performance of individual companies and general market or economic conditions. Such movements in the underlying values of the share of the investment portfolio will cause the NAV or prices of units to fall as well as rise. Market risk is mitigated through careful selection of securities and diversification through spreading of risk across a basket of assets and/or sectors.</p>
<p>Interest rate risk</p>	<p>Interest rates are inclined to fluctuate over time. A rise in the general level of interest rates will result in a decline of the value of all bonds and fixed interest securities. Hence a bond fund's NAV will most probably decrease with the rise of interest rates. Maintaining an appropriate diverse mix of assets with different yield and maturity profiles will lessen the impact of interest rate risk.</p>
<p>Liquidity risk</p>	<p>Liquidity risk is defined as the ease with which a security can be sold at or near its fair value depending on the volumes traded on the market. Liquidity risk is mitigated through the selection of stocks with an active trading volume in the open market. This ensures that exit strategies can be executed with little/minimal impacts to price fluctuations.</p>
<p>Company or security specific risk</p>	<p>There are many specific risks, which apply to individual companies or securities. Examples include the possible effect on a company of losing a key executive or the unforeseen entry of a new competitor into the market. The risk is mitigated by conducting in-house periodic reviews and analysis. In-house analysis is then supplemented by periodic reviews from rating agencies and market analysts.</p>
<p>Credit risk</p>	<p>Credit risk refers to an issuer's ability to make timely payments of profit and principal. In the event that the issuer of the instrument is faced with financial difficulties, leading to a decrease in their credit worthiness (i.e Bond prices will change/drop in the event of rating downgrade) and default in the payment of profit and principal, the value of the fund may be adversely affected. Credit risk is mitigated by conducting in-house periodic reviews and analysis. In-house analysis is then supplemented by periodic reviews from rating agencies and market analysts.</p>
