FUND MANAGER'S COMMENTS

- Malaysia's benchmark KLCI remained relatively resilient, ending the month flat with a 0.47% gain. Technology stocks led the recovery, driven by the anticipated "Trump Trade," which is expected to strengthen the US dollar. Export-oriented sectors, including technology, gloves, and manufacturing, also benefitted from the USD rally and continued global supply chain diversification efforts.
- Malaysia's economic fundamentals remain solid, with GDP expanding by 5.3% y-o-y in 3Q2024, matching expectations. Year-to-date growth stands at 5.2%, according to Bank Negara Malaysia (BNM). While the outlook is positive, some caution persists over inflation risks, once subsidy adjustments are implemented. BNM held the Overnight Policy Rate (OPR) steady at 3.00% during its policy meeting. While the central bank's tone remained neutral, it acknowledged the Ringgit's recent weakness and provided assurance that it has ample buffers to manage currency volatility.
- In November, with reference to KLCI, sector-wise, banks outperformed, supported by decent loan growth of 5-6% and stable asset quality. The property sector also fared well as robust property sales began to translate into profits for property companies. However, the petrochemical sector struggled due to weak product prices, while technology, and exporters faced headwinds from the sharp appreciation of the Ringgit during the third quarter. Following the reporting season, analysts have revised down their earnings growth estimates for 2024 from 15-16% to 13-14%. More importantly, the forecasted earnings growth for Malaysia in 2025 remains unchanged at 8-10%, reflecting cautious optimism for the year ahead.
- On the corporate front, the sudden passing of billionaire tycoon, Ananda Krishnan, may put further delays to any potential corporate exercises surrounding companies controlled by him – Maxis, Astro and Bumi Armada. Aside from that, Dialog Group Berhad reported a 9% q-o-q decline in earnings, breaking a four-quarter streak of consecutive growth. This decline was attributed to the sale of Dialog Jubail Supply Base Co Ltd (DJSB), a non-core asset in Saudi Arabia, which ceased contributing to the group's earnings starting this quarter. In other developments, Gamuda Berhad and 99 Speedmart are expected to replace Genting Berhad and Genting Malaysia Berhad as constituents in the KLCI index following the semi-annual review.

STRATEGY:

- Maintain cash level below 5%, remain highly invested;
- We continued trimming positions in utilities and some telcos while selectively adding to the technology and airline sectors, mainly Capital A Berhad. We also nibble on selected healthcare companies.
- Added some position in Press Metal Aluminium Hldg Bhd and construction companies such as Mah Sing Group Bhd & SP Setia Bhd Group, other names were rebalanced.
- Positioning remains focused in growth and cyclicals to capitalise on the improved market sentiment. About 30% of the fund are in defensives / yield to anchor against volatility.

RISKS

All investment carries some form of risks. The potential key risks include but are not limited to the following:

Market risk	Market risk arises because of factors that affect the entire marketplace. Factors such as economic growth, political stability and social environment are some examples of conditions that have an impact on businesses, whether positive or negative. Market risk cannot be eliminated by diversification. It stems from the fact that there are economy-wide perils which threaten all businesses. Hence, investors will be exposed to market uncertainties and no matter how many Shariah-compliant securities are held, fluctuations in the economic, political and social environment will affect the market price of the Shariah-compliant investments either in a positive or negative way.
Fund management risk	This risk refers to the day-to-day management of the target fund by AHAM Asset Management Berhad which will impact the performance of the target fund. For example, investment decisions undertaken by AHAM Asset Management Berhad as a result of an incorrect view of the market or any non-compliance with internal policies, investment mandate, the deed, relevant law or guidelines due to factors such as human error, fraudulence, dishonesty or weaknesses in operational process and systems, may adversely affect the performance of the target fund.
Performance risk	There is no guarantee in relation to the investment returns.
Inflation risk	This is the risk that your investment in the target fund may not grow or generate income at a rate that keeps pace with inflation. This would reduce your purchasing power even though the value of the investment in monetary terms has increased.
Liquidity risk	Liquidity risk arises in two scenarios. The first scenario is where the target fund's investment cannot be sold due to unavailability of a buyer for that investment. The second scenario exists where the target fund's investment, by its nature, is thinly traded. This will have the effect of causing the target fund's investment to be sold below its fair value which would adversely affect the NAV of the target fund.
Credit/Default risk	Credit risk relates to the creditworthiness of the issuers of the investment (Islamic money market instruments) and their expected ability to make timely payment of interest and/or principal. Any adverse situations faced by the issuers may impact the value as well as liquidity of the investment. In the case of rated investments, this may lead to a credit downgrade. Default risk relates to the risk of an issuer of the investment either defaulting on payments or failing to make payments in a timely manner which will in turn adversely affect the value of the investment. This could adversely affect the value of the target fund.
Equity investment risk	This is the risk associated with investing in a particular equity. The value of individual equity is mainly determined by its potential growth in earnings, sound management, and treatment of minority shareholders, as well as a myriad of other factors. Failure to achieve these would result in declining investment value which in turn affects the performance of the target fund. This can be mitigated by diversifying the target fund's portfolios.

RISKS (CONTINUED)

Reclassification of Shariah status risk

This risk refers to the risk that the currently held Shariah-compliant securities by the target fund may be reclassified to be Shariah non-compliant in the periodic review of the equities by the Shariah Advisory Council of the Securities Commission Malaysia (SACSC), the Shariah Adviser for the target fund or the Shariah boards of the relevant Islamic indices.

If this occurs, AHAM Asset Management Berhad will take the necessary steps to dispose of such equities. There may be opportunity loss to the target fund due to the target fund not being allowed to retain the excess capital gains derived from the disposal of the Shariah non-compliant equities. AHAM Asset Management Berhad will be required to dispose of these equities immediately if the prices are above the purchase price. Should the prices be below the purchase price, AHAM Asset Management Berhad may choose to hold on to these holdings until the prices meet the purchase price. Nevertheless, should AHAM Asset Management Berhad decide to dispose of these equities below the purchase price, the target fund will be faced with the risk of realising its losses, thus negatively impacting the NAV of the target fund.

Shariah-compliant warrants investment risk

The value of the Shariah-compliant warrants (“warrants”) will depend on the pricing of the underlying security whereby the growth and performance prospect of the underlying security would consequentially affect the value of the warrants. In addition, the value of the warrants may decrease exponentially as the warrants approach its maturity date and the potential gains from a favourable price movement of the underlying security may be offset by aggressive time decay. AHAM Asset Management Berhad may consider unwinding these warrants if there are material adverse changes to its value with the aim to mitigate the risk.
