PERFORMANCE RECORD

The Fund feeds into Affin Hwang Select Asia (ex Japan) Quantum Fund ("target fund") with the objective of achieving capital appreciation over the medium to long-term by investing in Asia (ex Japan) equities with market capitalization of not more than USD1.5 billion at the time of investment. However, the target fund would also have an option to invest into companies with a market capitalization of not more than USD3.0 billion at the time of investment, which will be capped at no more than 30% of the Net Asset Value (NAV) of the target fund.

Table below shows the investment returns of Sun Life Malaysia Select Asia (ex Japan) Quantum Fund versus its benchmark as at 30 August 2021:

%	YTD	1M	6M	1-Year	3-Years	5-Years	Since Inception
Fund*	13.67	-2.21	-2.23	13.13	58.67	53.93	85.99
Benchmark	20.74	-1.90	10.94	37.02	32.86	48.82	74.57

FUND MANAGER'S COMMENTS

- Global equities advanced in August despite taper talks by the US Federal Reserve. The Fed soothed market fears by asserting that the Fed will remain accommodative and not rush to raise rates. The MSCI AC World index was up 2.5% while the S&P 500 rose 3.0% in the month. US equities hit all-time highs buoyed by stimulus optimism
- The MSCI AC Asia ex-Japan index was up 2.3% even as regulatory headwinds continue to cloud North Asian markets. China passed a major data protection law setting out tougher rules on how companies collect and handle their users' information.
- Regulatory concerns continued to dominate as Chinese state media reported that gaming firms should no longer have the preferential tax measures previously introduced to encourage the development of the domestic software sector.
- Share price of luxury stocks and retailers in China fell on investors panic selling due to concerns that ultra-wealthy individuals may be targeted. This comes on the back of a recent policy meeting chaired by President Xi Jinping, in which he added that China must pursue "common prosperity" in which wealth is shared by all people.
- Some weakness was seen in the semiconductor space. The DRAM sector is seeing some softness amidst concerns that it has reached its cyclical top. Average selling prices growth is set to moderate as manufacturers turn cautious on demand. Tech-heavy markets including Taiwan and Korea saw some selling during the month.

STRATEGY:

- Valuations for Asian markets are now more palatable, and sentiments are less exuberant. However, regulatory risk in China and slowing economic and earnings growth could pose more downside risk in the near term. Tapering would be another risk we watch out for.
- Asian markets are expected to remain rangebound due to a lack of catalysts. The Chinese markets may continue to struggle due to tightening fears and regulatory overhang on the internet sector.
- The fund's invested level is now at 87%, as the fund reduced exposure to selected Chinese stocks due to regulatory risk. We continue to be on the lookout for structural growth names but the fund has a larger tilt towards value reopening and cyclical names for now.
- The fund exited a Chinese game development company due to increased regulatory risk. We added an Indonesian property developer, and several Taiwan companies including a café and bakery operator, an electronic product safety test service provider, and a contact lens OEM.
- Structural growth names and economic reopening themes make up bulk of the fund, while cyclicals exposure has increased to around 15% of the fund.

RISKS

All investment carries some form of risks. The potential key risks include but are not limited to the following:

Market risk	Market risk refers to the possibility that an investment will lose value because of a general decline in financial markets, due to economic, political and/or other factors, which will result in a decline in the target fund's NAV.
Stock specific risk	Prices of a particular stock may fluctuate in response to the circumstances affecting individual companies such as adverse financial performance, news of a possible merger or loss of key personnel of a company. Any adverse price movements of such stock will adversely affect the target fund's NAV.
Credit and default risk	Credit risk relates to the creditworthiness of the issuers of the debentures or money market instruments (hereinafter referred to as "investment") and their expected ability to make timely payment of interest and/or principal. Any adverse situations faced by the issuers may impact the value as well as liquidity of the investment. In the case of rated investment, this may lead to a credit downgrade. Default risk relates to the risk of an issuer of the investment either defaulting on payments or failing to make payments in a timely manner which will in turn adversely affect the value of the investment. This could adversely affect the value of the target fund.
Interest rate risk	This risk refers to the impact of interest rate changes on the valuation of debentures or money market instruments (hereinafter referred to as "investment"). When interest rates rise, the investment prices generally decline and this may lower the market value of the investment. The reverse may apply when interest rates fall.
Warrants investment risk	The value of the warrants will depend on the pricing of the underlying security, whereby the growth and performance prospect of the underlying security would consequentially affect the value of the warrants. In addition, the value of the warrants may decrease exponentially as the warrants approach its maturity date and the potential gains from a favourable price movement of the underlying security may be offset by aggressive time decay. We may consider unwinding these warrants if there are material adverse changes to its value with the aim to mitigate the risk.
Country risk	Investments of the target fund in any country may be affected by changes in the economic and political climate, restriction on currency repatriation or other developments in the law or regulations of the countries in which the target fund invests. For example, the deteriorating economic condition of such countries may adversely affect the value of the investments undertaken by the target fund in those affected countries. This in turn may cause the NAV of the target fund or prices of units to fall.

RISKS (CONTINUED)

All investment carries some form of risks. The potential key risks include but are not limited to the following:

Currency risk

As the investments of the target fund may be denominated in currencies other than the base currency, any fluctuation in the exchange rate between the base currency and the currencies in which the investments are denominated may have an impact on the value of these investments. You should note that any gains or losses arising from the fluctuation in the exchange rate may further increase or decrease the returns of the investment.

Currency risk at the target fund level

The impact of the exchange rate movement between the base currency of the target fund and the currency of the underlying investments (other than in MYR) may result in a depreciation of the value of the investments as expressed in the base currency of the target fund.

Regulatory risk

The investments of the target fund would be exposed to changes in the laws and regulations in the countries the target fund is invested in. These regulatory changes pose a risk to the target fund as it may materially impact the investments of the target fund. In an effort to manage and mitigate such risk, the fund manager seeks to continuously keep abreast of regulatory developments (for example, by closely monitoring announcements on regulators' website and mainstream media) in that country. The fund manager may dispose its investments in that particular country should the regulatory changes adversely impact the policy owners' interest or diminish returns of the target fund.
