FUND MANAGER'S COMMENTS

In August, the fund rose 2.70% in MYR terms, outperforming the benchmark by 357bps. Year-to-date the Fund rose 4.67%, outperforming the Benchmark by 210bps. The outperformance of the month was driven by basic materials, industrials and consumer services.

The FTSE Bursa Malaysia Composite Index ("KLCI") underperformed its regional peers in August with a 4.9% loss. Rotational play into non gloves sectors, such as technology (+11.3%) energy (+6.5%) and property (+3.5%) led to some selling pressure on the Healthcare sector, thus driving the KLCI lower. Banking stocks came under pressure, as 2Q financial numbers came in weaker than expected added by the surprise zero dividend been announced by majority of the Banks. Going into 4Q2020, we turned cautious on two key factors, i) small-cap stocks following recent rally and ii) Rising global volatility (driven by US-China Trade tension and US Presidential Election). We are underweight on glove stocks for now and would prefer mid-and big-cap stocks which benefit from reopening of economy such as Technology, and Commodities.

Asia: Regional equities should continue to benefit from the revival of economic activities as countries progressively re-open for business. The Fed's shift in monetary policy strategy from flexible inflation targeting to average inflation targeting reaffirmed our belief that interest rates will stay low for longer and the resultant depreciation of USD would be a tailwind for Asian equities. We expect fiscal policies to remain supportive as governments' focus transits from supporting household income to job creation.

we rate Asian equities a BUY over a 12-month horizon. We remain positive on China and the more developed Asian economies. Our stock investments are geared towards companies benefiting from structural growth drivers such as internet platforms, datacenters, electrification of vehicles and quality companies which are long-term winners with favorable supply discipline, little competition, or possess significant brand equity.

RISKS

All investment carries some form of risks. The potential key risks include but are not limited to the following:

Market risk	<p>Market risk is the risk of negative movement that affects the price of all assets in a particular capital market. The factors influencing the performance of the markets include:</p> <ul style="list-style-type: none"> • Economic and financial market conditions • Political change • Broad investor sentiment • Movements in interest rate and inflation • Currency risks <p>Stock values fluctuate in response to the activities and performance of individual companies and general market or economic conditions. Such movements in the underlying values of the share of the investment portfolio will cause the NAV or prices of units to fall as well as rise. Market risk is mitigated through careful selection of securities and diversification through spreading of risk across a basket of assets and/or sectors.</p>
Security risk	<p>Security risk applies to individual companies or securities. Examples include the possible effect on a company of losing a key executive or the unforeseen entry of a new competitor into the market. The risk is mitigated by the fund manager's periodic research and analysis on all the underlying securities held by the fund.</p>
Foreign currency risk	<p>This risk is associated with investments that are quoted and/or priced in foreign currency denomination. Malaysian based investors should be aware that if the RM appreciates against the currencies in which the portfolio of the investment is denominated, this will have an adverse effect on the NAV of the Fund and vice versa. Investors should note that any gains or losses arising from the movement of the foreign currencies against its home currency may therefore increase/decrease the capital gains of the investment. Nevertheless, investors should realize that currency risk is considered as one of the major risks to investments in foreign assets due to the volatile nature of the foreign exchange market. The risk is mitigated through a diversified exposure into markets where the regulatory authorities are members of the IOSCO.</p>
Credit risk	<p>The risk of loss of principal or loss of a financial reward stemming from counterparty's failure to repay a loan or otherwise meet a contractual obligation. This risk is primarily applicable to the liquid assets of this fund. Credit risk is mitigated by fund manager's periodic reviews and analysis.</p>
Country risk	<p>A fund investing in foreign countries may be affected by risks specific to the countries in which it invests. Such risks include changes in the country's economic fundamentals, social and political stability, currency movements and foreign investment policies. These factors may have an impact on the prices of the Fund's investment in that country and consequently may also affect the fund's NAV and its growth. To mitigate this risk, the fund manager will diversify securities investment that spread across various countries.</p>
