## FUND MANAGER'S COMMENTS

- The US Fed kept its benchmark rate unchanged at 0-0.25%. It pledged to maintain the monthly \$120bil bond buying program until it sees "substantial further progress" in employment and inflation. The Fed updated its headline GDP forecast upwards, though the Fed signaled that rates would remain at zero-bound levels through 2023.
- US President Donald Trump signed the \$2.3 trillion funding bill that includes the \$900bio coronavirus stimulus aids, averting a federal government shutdown and restoring jobless benefits for millions of unemployed Americans.
- The bets on global economic recovery due to vaccine optimism and further stimulus has resulted in the Dollar slumping further in December, declining 2.1% from the month before. The 10-year UST yield trended upwards during the month and ended the year at 0.91%, 7bps higher compared to the end of November.
- The ECB left interest rates unchanged in December but expanded and extended its package of COVID-19 support measures into 2022. The ECB added €500bio to its pandemic emergency purchase programme (PEPP), taking the total to €1.85 trillion amidst uncertainty over the impact of second wave of Covid cases to the economic recovery in the Eurozone.
- The local bond market started the month on a negative footing with investors cutting risk amidst concerns over the impact of EPF upsizing its i-Sinar programme and as Fitch Ratings downgraded Malaysia's long-term foreign-currency issuer default rating (IDR) to 'BBB+' with a stable outlook.
- **STRATEGY:** Rates are likely to remain low given concerns on low growth and lack of inflationary pressures. Focus will be on credit selection with government bonds to provide liquidity and trading opportunities.
- The Chinese property sector continues to be the main contributor for yield. We also added positions in Chinese govt bonds due to the attractive yield, strong reserves, and the economic recovery from the pandemic.
- We continue to favor quality names with a slight tilt towards the IG segment. Invested level is at ~91% and we intend to keep invested level at 90-95% for better opportunities.
- Duration remained at around 5.6 years while open USD positions were further reduced.

## RISKS

All investment carries some form of risks. The potential key risks include but are not limited to the following:

Market risk	Market risk refers to the possibility that an investment will lose value because of a general decline in financial markets, due to economic, political and/or other factors, which will result in a decline in the target fund's NAV.
Liquidity risk	Liquidity risk refers to two scenarios. The first scenario is where an investment cannot be sold due to unavailability of a buyer for that investment. The second scenario exists where the investment, by its nature, is thinly traded. This will have the effect of causing the investment to be sold below its fair value which would adversely affect the NAV of the target fund.
Credit and default risk	Credit risk relates to the credit worthiness of the issuers of the bonds or money market instruments ("Investment") and their expected ability to make timely payment of interest and/or principal. Any adverse situations faced by the issuer may impact the value as well as liquidity of the Investment. In the case of rated investment, this may lead to a credit downgrade. Default risk relates to the risk of an issuer of the Investment either defaulting on payments or failing to make payments in a timely manner which will in turn adversely affect the value of the Investment. This could adversely affect the value of the target fund.
Interest rate risk	This risk refers to the impact of interest rate changes on the valuation of bonds or money market instruments ("Investment"). When interest rates rise, the investment prices generally decline and this may lower the market value of the Investment. The reverse may apply when interest rates fall.
Currency risk	<p>As the Investments of the target fund may be denominated in currencies other than the base currency, any fluctuation in the exchange rate between the base currency and the currencies in which the investments are denominated may have an impact on the value of these investments. Investors should note that any gains or losses arising from the fluctuation in the exchange rate may further increase or decrease the returns of the investment.</p> <p><u>Currency risk at the target fund level</u> The impact of the exchange rate movement between the base currency of the target fund and the currency of the underlying investments may result in a depreciation of the value of the investments as expressed in the base currency of the target fund.</p>

## RISKS

All investment carries some form of risks. The potential key risks include but are not limited to the following:

### Structured products risk

The NAV of the target fund will be impacted by the valuation of the structured product. Factors that may impact the valuation of the structured products will include, but not be limited to movement of the underlying assets, volatility of the underlying assets, interest rate levels, the correlation of the underlying assets and other such factors. Any change in the aforesaid factors would either positively or negatively impact the valuation of the structured products, hence impacting the NAV of the target fund. As such, the target fund's NAV will be exposed to potential price volatility, which will be dependent on the valuation of the structured products that the target fund invested in.

### Country risk

Investments of the target fund in any country may be affected by changes in economic and political climate, restriction on currency repatriation or other developments in the law or regulations of the countries in which the target fund invests. For example, the deteriorating economic condition of such countries may adversely affect the value of the investments undertaken by the target fund in those affected countries. This in turn may cause the NAV of the target fund or prices of units to fall.

### Regulatory risk

The investments of the target fund would be exposed to changes in the laws and regulations in the countries the target fund is invested in. These regulatory changes pose a risk to the target fund as it may materially impact the investments of the target fund. In an effort to manage and mitigate such risk, the fund manager seeks to continuously keep abreast of regulatory developments (for example, by closely monitoring announcements on regulators' website and mainstream media) in that country. The fund manager may dispose its investments in that particular country should the regulatory changes adversely impact the investors' interest or diminish returns to the target fund.
