#### PERFORMANCE RECORD

The Fund feeds into Affin Hwang Select Asia (ex Japan) Quantum Fund (“target fund”) with the objective of achieving capital appreciation over the medium to long-term by investing in Asia (ex Japan) equities with market capitalization of not more than USD1.5 billion at the time of investment. However, the target fund would also have an option to invest into companies with a market capitalization of not more than USD3.0 billion at the time of investment, which will be capped at no more than 30% of the Net Asset Value (NAV) of the target fund.

Table below shows the investment returns of Sun Life Malaysia Select Asia (ex Japan) Quantum Fund versus its benchmark as at 31 December 2020:

%	YTD	1M	6M	1-Year	3-Years	5-Years	Since Inception
<b>Fund*</b>	32.93	0.70	19.81	32.93	23.40	51.61	63.62
<b>Benchmark</b>	21.14	4.77	25.08	21.14	1.21	19.49	44.58

\* Calculation of past performance is based on NAV-to-NAV

#### FUND MANAGER'S COMMENTS

- Global markets closed on a positive note buoyed by optimism surrounding the rollout of COVID-19 vaccines. The S&P 500 index edged 1.0% higher in December as uncertainties surrounding the fiscal stimulus bill were allayed.
- The MSCI Asia ex-Japan index rose 3.7% in December as recovery takes hold in the region. The Asian index posted gains of 20.4% in 2020.
- In Asia, sentiment was somewhat dampened after MSCI announced that it would remove 10 Chinese securities from its indexes. This follows US President Trump's order that bans American companies and individuals from owning shares of Chinese companies that the White House alleges supports China's military.
- Singapore entered Phase 3 of its reopening that will further ease capacity limits in public places like malls and attractions. Singapore REITs including Fraser Centrepoint Trust are set to benefit from an increase in footfall as the country also rolls out its vaccination programme.
- The local market tracked regional gains with the benchmark KLCI closing 1.6% higher. The index closed the year up 2.4% buoyed by a liquidity-driven rally as lower interest rates boost risk appetite.
- **STRATEGY:** We remain constructive on equities on the expectations that global growth would continue on its recovery path heading into 2021, continued accommodative policies, positive earnings revision and encouraging vaccine developments. As such, the Fund remains relatively highly invested.
- However, we remain cognizant of the risk of policy tapering as the economy recovers, overly bullish market sentiments and potentially more Covid-19 resurgence that tempers expectations of a return to normalcy.
- We continue to be positioned in secular growth stocks but are marginally shifting to value names. We look to have a balanced exposure to companies that can grow structurally post vaccine and to reopening plays and cyclicals.
- Reopening/cyclical positions now make up about 20% of the fund. The fund maintains its bias on the technology and medtech sectors as we view these as structural sectors in China.

## RISKS

All investment carries some form of risks. The potential key risks include but are not limited to the following:

<b>Market risk</b>	Market risk refers to the possibility that an investment will lose value because of a general decline in financial markets, due to economic, political and/or other factors, which will result in a decline in the target fund's NAV.
<b>Stock specific risk</b>	Prices of a particular stock may fluctuate in response to the circumstances affecting individual companies such as adverse financial performance, news of a possible merger or loss of key personnel of a company. Any adverse price movements of such stock will adversely affect the target fund's NAV.
<b>Credit and default risk</b>	Credit risk relates to the creditworthiness of the issuers of the debentures or money market instruments (hereinafter referred to as "investment") and their expected ability to make timely payment of interest and/or principal. Any adverse situations faced by the issuers may impact the value as well as liquidity of the investment. In the case of rated investment, this may lead to a credit downgrade. Default risk relates to the risk of an issuer of the investment either defaulting on payments or failing to make payments in a timely manner which will in turn adversely affect the value of the investment. This could adversely affect the value of the target fund.
<b>Interest rate risk</b>	This risk refers to the impact of interest rate changes on the valuation of debentures or money market instruments (hereinafter referred to as "investment"). When interest rates rise, the investment prices generally decline and this may lower the market value of the investment. The reverse may apply when interest rates fall.
<b>Warrants investment risk</b>	The value of the warrants will depend on the pricing of the underlying security, whereby the growth and performance prospect of the underlying security would consequentially affect the value of the warrants. In addition, the value of the warrants may decrease exponentially as the warrants approach its maturity date and the potential gains from a favourable price movement of the underlying security may be offset by aggressive time decay. We may consider unwinding these warrants if there are material adverse changes to its value with the aim to mitigate the risk.
<b>Country risk</b>	Investments of the target fund in any country may be affected by changes in the economic and political climate, restriction on currency repatriation or other developments in the law or regulations of the countries in which the target fund invests. For example, the deteriorating economic condition of such countries may adversely affect the value of the investments undertaken by the target fund in those affected countries. This in turn may cause the NAV of the target fund or prices of units to fall.

## RISKS (CONTINUED)

All investment carries some form of risks. The potential key risks include but are not limited to the following:

### Currency risk

As the investments of the target fund may be denominated in currencies other than the base currency, any fluctuation in the exchange rate between the base currency and the currencies in which the investments are denominated may have an impact on the value of these investments. You should note that any gains or losses arising from the fluctuation in the exchange rate may further increase or decrease the returns of the investment.

#### Currency risk at the target fund level

The impact of the exchange rate movement between the base currency of the target fund and the currency of the underlying investments (other than in MYR) may result in a depreciation of the value of the investments as expressed in the base currency of the target fund.

### Regulatory risk

The investments of the target fund would be exposed to changes in the laws and regulations in the countries the target fund is invested in. These regulatory changes pose a risk to the target fund as it may materially impact the investments of the target fund. In an effort to manage and mitigate such risk, the fund manager seeks to continuously keep abreast of regulatory developments (for example, by closely monitoring announcements on regulators' website and mainstream media) in that country. The fund manager may dispose its investments in that particular country should the regulatory changes adversely impact the policy owners' interest or diminish returns of the target fund.
