#### FUND MANAGER'S COMMENTS

The Fund (Class MYR) increased by 60bps during the month of August 2021, underperforming the benchmark by 17bps.

Developed economies continued to rally in August after Powell's Jackson Hole speech. He expects labor conditions to continue to improve which would allow tapering to start this year. Markets welcomes his view that current high inflation is transitory and therefore the Fed would keep policy rates low. S&P 500, MSCI Europe and MSCI Japan returning 3.0%, 2% and 3.2% respectively, in their respective currency. Dollar appreciated by 0.5% although weakened a bit after Powell's dovish speech. Euro and Japanese Yen depreciated by 0.5% and 0.3% against the Dollar. US 10-year bond yield inched up to 1.3% from last month at the time of writing.

We maintain a positive stance in all developed markets as we think developed economies would continue to lead global growth with strong earnings outlook. Vaccines so far are shown to offer protection against the Delta variant, which allows countries with high vaccination rates to continue lifting restrictions. We expect Japan's lagging recovery will catch up with US and Europe as its Covid cases appear to have peaked. As vaccination rates rise, we expect restrictions to be lifted in the next few months. We think developed markets are in a better position when Fed tapering becomes closer. In addition, accommodative financial conditions support developed market valuation.

## RISKS

All investment carries some form of risks. The potential key risks include but are not limited to the following:

<b>Market risk</b>	Market risk refers to the possibility that an investment will lose value because of a general decline in financial markets, due to economic, political and/or other factors, which will result in a decline in the target fund's NAV.
<b>Stock specific risk</b>	Prices of a particular stock may fluctuate in response to the circumstances affecting individual companies such as adverse financial performance, news of a possible merger or loss of key personnel of a company. Any adverse price movements of such stock will adversely affect the target fund's NAV.
<b>Country risk</b>	Investments of the target fund in any country may be affected by changes in the economic and political climate, restriction on currency repatriation or other developments in the law or regulations of the countries in which the target fund invests. For example, the deteriorating economic condition of such countries may adversely affect the value of the investments undertaken by the target fund in those affected countries. This in turn may cause the NAV of the target fund or prices of units to fall.
<b>Currency risk</b>	As the investments of the target fund may be denominated in currencies other than base currency, any fluctuation in the exchange rate between the base currency and the currencies in which the investments are denominated may have an impact on the value of these investments. You should be aware that if the currencies in which the investments are denominated depreciate against the base currency, this will have an adverse effect on the NAV of the target fund and vice versa. You should note that any gains or losses arising from the fluctuation in the exchange rate may further increase or decrease the returns of the investment.
<b>Fund manager's risk</b>	Since the target fund invests into collective investment scheme managed by another manager, the fund manager has absolute discretion over the fund's investment technique and knowledge, operational controls and management. In the event of mismanagement of the fund and/or the management company, the NAV of the target fund, which invests into the fund would be affected negatively. Although the probability of such occurrence is minute, should the situation arise, Principal (S) will seek for an alternative collective investment scheme that is consistent with the objective of the target fund.

## RISKS (CONTINUED)

All investment carries some form of risks. The potential key risks include but are not limited to the following:

### **Credit and default risk**

Investments of the target fund may involve a certain degree of credit and default risk. Generally, credit and default risk is the risk of loss due to the counterparty's and/or issuer's non-payment or untimely payment of the investment amount as well as the returns on investment. Principal (S) aims to mitigate this risk by performing fundamental credit research and analysis to determine the creditworthiness of its counterparty and/or issuer.
