## FUND MANAGER’S COMMENTS

The Fund rose 0.34% during the month, outperforming the benchmark by 0.04ppt.

MSCI AC Asia ex Japan Islamic Index fell 0.5% in USD terms in August with India, Indonesia and Thailand outperforming while Singapore, North Asia and China were laggards. The US 10-year bond yield rose by 54bps to 3.2% with a more hawkish commentary by the US Fed Chairman during its Jackson Hole meeting. Crude oil declined 12% amidst recessionary concerns, which could lead OPEC to adjust its supply in the coming months.

As the Fed continues to tighten its monetary policy, most Asian central banks would have to follow a similar path. The resultant economic growth in reaction to the rate hike cycle would be keenly watched. The inflation trajectory would be the key determinant of the Fed’s ability to slow down its pace of rate hikes or even reverse course depending on the extent of the economic and/ or financial market slowdown. Although still a distance from the Fed’s target of 2%, the inflation as measured by the US core PCE is trending downwards in the right direction. US-China relationship remains frosty, although some progress has been made with regards to allowing the US Public Company Accounting Oversight Board to vet the work of audit firms in Mainland China and Hong Kong SAR for the first time. The Politburo also announced the much anticipated five-yearly congress will begin on Oct 16th. Clarity on wide-ranging policies and its approach toward zero-COVID post meeting would be key.

Market risks persist on the path of monetary policy normalization led by the US Fed and reaction from Asian central banks. Also worthy to take note of are the US-China tensions which can range from company specific sanctions, financial markets such as Chinese listings in the US, military conflicts etc.

**RISKS**

All investment carries some form of risks. The potential key risks include but are not limited to the following:

<b>Market risk</b>	Market risk refers to the possibility that an investment will lose value because of a general decline in financial markets, due to economic, political and/or other factors, which will result in a decline in the target fund's NAV.
<b>Inflation risk</b>	This is the risk that your investment in the target fund may not grow or generate income at a rate that keeps pace with inflation. This would reduce your purchasing power even though the value of the investment in monetary terms has increased.
<b>Manager's risk</b>	This risk refers to the day-to-day management of the target fund by the manager which will impact the performance of the fund. For example, investment decisions undertaken by Principal, as a result of an incorrect view of the market or any non-compliance with internal policies, investment mandate, the deed, relevant law or guidelines due to factors such as human error or weaknesses in operational process and systems, may adversely affect the performance of the target fund.
<b>Reclassification of Shariah status risk</b>	This risk refers to the risk that the currently held Shariah-compliant securities in the target fund may be reclassified as Shariah non-compliant in the periodic review of the securities by the Shariah Advisory Council of the Securities Commission Malaysia (SACSC), Shariah adviser of the issuer, the Shariah Adviser or the Shariah boards of the relevant Islamic indices. If this occurs, Principal will take the necessary steps to dispose of such securities. There may be opportunity loss to the target fund due to the target fund not being allowed to retain the excess gains derived from the disposal of the Shariah non-compliant securities. In the event that the Shariah non-compliant securities are disposed of at a price lower than the investment cost, it may adversely affect the value of the target fund. Thus, it may cause the NAV of the target fund or price of units to fall.
<b>Risk associated with investing in Islamic CIS</b>	Since the target fund will invest entirely into Islamic CIS, there is a risk of concentration into Islamic CIS, in which the Islamic CIS's management company has absolute discretion over the Islamic CIS's investment technique and knowledge, operational controls and management. In the event of mismanagement of the Islamic CIS and/or the management company, the NAV of the target fund, which invests into those Islamic CIS would be affected negatively. Should the situation arise, Principal will seek for another Islamic CIS that is consistent with the objective of the target fund.
<b>Country risk</b>	The target fund may invest into Islamic CIS which can be domiciled in various countries. Therefore, the target fund will be subjected to risks specific to the countries in which the Islamic CIS are domiciled. Such risks include adverse changes in economic fundamentals, social and political stability, laws and regulations and foreign investments policies. These factors may have an adverse impact on the price of the Islamic CIS, which will depress the Islamic CIS's NAV growth, and consequently depress the target fund's NAV growth.

**RISKS**

**Currency risk**

As the target fund may invest into Islamic CIS denominated in currencies other than MYR, any fluctuation in the exchange rate between MYR and the currencies in which the Islamic CIS are denominated may have an impact on the value of these investments. You should note that any gains or losses arising from the fluctuation in the exchange rate may further increase or decrease the returns of the target fund.
