FUND MANAGER'S COMMENTS

- The KLCI benchmark index advanced by 3.27%, driven by positive 2Q'2024 earnings results. Banks were standout performers during the results season, primarily due to higher dividends and improved loan growth. In contrast, the tech sector faced challenges, making it the biggest decliner. The sector was weighed down by concerns over a stronger Ringgit, leading to sluggish results and order delays. However, a recovery is expected in the second half of the year, with improvements likely reflected in 3Q'24 earnings. Malaysia's 2Q'2024 GDP growth exceeded expectations, coming in at 5.9% year-on-year, above the forecasted 5.8%. This growth was bolstered by resilient household spending and stronger exports, surpassing the 1Q'2024 GDP growth of 4.2%.
- In other news, markets had a knee jerk reaction as the property and construction sectors experienced a sharp decline following the discovery of two sinkholes in Masjid India, Kuala Lumpur. In response, Kuala Lumpur City Hall (DBKL) issued a new directive requiring that planning permission applications for the construction of buildings in Kuala Lumpur will no longer be considered without a geotechnical study prepared by certified engineers. However, channel checks indicate that such requirements have been in place already for all development. As such, the new directive likely calls for even more detailed submissions by developers. Nonetheless we believe the softness in the share price of construction and property names is an overreaction, especially since Kuala Lumpur is already a highly developed city with limited new or ongoing projects.
- In addition to that, the Energy Commission announced the proposed wheeling charges for renewable energy (RE) developers to access the grid, set at 45 sen/kWh for producers without battery storage. When factoring in generation costs, the total cost exceeds 65 sen/kWh, which is above the current tariff expected to be below 60 sen/kWh. This new pricing may discourage corporates from purchasing green energy directly from RE developers. Nonetheless, we remain optimistic about the RE sector, as the National Energy Transition Roadmap is on track to meet its targets, with RM60 billions of investments already committed.
- On corporate news flow, Digital Nasional Berhad (DNB) has terminated its share sale agreement with Telekom Malaysia (TM) for a stake in the company. This decision is positive for shareholders, as it allows TM to save on capital expenditures while still providing 5G services as a wholesale access seeker and offering fibre services to 5G networks.

STRATEGY:

- Maintain high invested level due to positive outlook for market, with cash at 5.3%
- We continue to focus in the property, construction, utilities, and export sectors.
- We selectively nibbled on quality property, tech as well as telco recently; and
- Positioning remains focused in growth and cyclicals to capitalise on the improved market sentiment. About 30% of the fund are in defensives / yield to anchor against volatility.

RISKS

All investment carries some form of risks. The potential key risks include but are not limited to the following:

| | |
|-------------------------------|--|
| Market risk | Market risk arises because of factors that affect the entire marketplace. Factors such as economic growth, political stability and social environment are some examples of conditions that have an impact on businesses, whether positive or negative. Market risk cannot be eliminated by diversification. It stems from the fact that there are economy-wide perils which threaten all businesses. Hence, investors will be exposed to market uncertainties and no matter how many Shariah-compliant securities are held, fluctuations in the economic, political and social environment will affect the market price of the Shariah-compliant investments either in a positive or negative way. |
| Fund management risk | This risk refers to the day-to-day management of the target fund by AHAM Asset Management Berhad which will impact the performance of the target fund. For example, investment decisions undertaken by AHAM Asset Management Berhad as a result of an incorrect view of the market or any non-compliance with internal policies, investment mandate, the deed, relevant law or guidelines due to factors such as human error, fraudulence, dishonesty or weaknesses in operational process and systems, may adversely affect the performance of the target fund. |
| Performance risk | There is no guarantee in relation to the investment returns. |
| Inflation risk | This is the risk that your investment in the target fund may not grow or generate income at a rate that keeps pace with inflation. This would reduce your purchasing power even though the value of the investment in monetary terms has increased. |
| Liquidity risk | Liquidity risk arises in two scenarios. The first scenario is where the target fund's investment cannot be sold due to unavailability of a buyer for that investment. The second scenario exists where the target fund's investment, by its nature, is thinly traded. This will have the effect of causing the target fund's investment to be sold below its fair value which would adversely affect the NAV of the target fund. |
| Credit/Default risk | Credit risk relates to the creditworthiness of the issuers of the investment (Islamic money market instruments) and their expected ability to make timely payment of interest and/or principal. Any adverse situations faced by the issuers may impact the value as well as liquidity of the investment. In the case of rated investments, this may lead to a credit downgrade. Default risk relates to the risk of an issuer of the investment either defaulting on payments or failing to make payments in a timely manner which will in turn adversely affect the value of the investment. This could adversely affect the value of the target fund. |
| Equity investment risk | This is the risk associated with investing in a particular equity. The value of individual equity is mainly determined by its potential growth in earnings, sound management, and treatment of minority shareholders, as well as a myriad of other factors. Failure to achieve these would result in declining investment value which in turn affects the performance of the target fund. This can be mitigated by diversifying the target fund's portfolios. |

RISKS (CONTINUED)

Reclassification of Shariah status risk

This risk refers to the risk that the currently held Shariah-compliant securities by the target fund may be reclassified to be Shariah non-compliant in the periodic review of the equities by the Shariah Advisory Council of the Securities Commission Malaysia (SACSC), the Shariah Adviser for the target fund or the Shariah boards of the relevant Islamic indices.

If this occurs, AHAM Asset Management Berhad will take the necessary steps to dispose of such equities. There may be opportunity loss to the target fund due to the target fund not being allowed to retain the excess capital gains derived from the disposal of the Shariah non-compliant equities. AHAM Asset Management Berhad will be required to dispose of these equities immediately if the prices are above the purchase price. Should the prices be below the purchase price, AHAM Asset Management Berhad may choose to hold on to these holdings until the prices meet the purchase price. Nevertheless, should AHAM Asset Management Berhad decide to dispose of these equities below the purchase price, the target fund will be faced with the risk of realising its losses, thus negatively impacting the NAV of the target fund.

Shariah-compliant warrants investment risk

The value of the Shariah-compliant warrants (“warrants”) will depend on the pricing of the underlying security whereby the growth and performance prospect of the underlying security would consequentially affect the value of the warrants. In addition, the value of the warrants may decrease exponentially as the warrants approach its maturity date and the potential gains from a favourable price movement of the underlying security may be offset by aggressive time decay. AHAM Asset Management Berhad may consider unwinding these warrants if there are material adverse changes to its value with the aim to mitigate the risk.
