FUND MANAGER'S COMMENTS

In July 2020, the Fund's performance increased by 2.91%, underperforming the benchmark by 3.18%.

The FTSE Bursa Malaysia Composite Index ("KLCI") outperformed its regional peers again in July with a 6.85% gain. The broader market has performed even better as the FBM Small Cap Index and FBM ACE Index gained a whopping 10.1% and 38.5% respectively. The healthcare sector was again the star of the month as the continued rise in global Covid-19 new cases underpinned the spike in demand for PPE including gloves. This led to a 68.0% gain in Bursa Malaysia Healthcare Index. Besides healthcare, technology (+24.4%) and plantation (+6.5%) are the two other notable sectors which also contributed to the broad rally.

BNM lowered the Overnight Policy Rate by 25 bps to 1.75% for the fourth time this year at its MPC meeting held in July-20. They mentioned that the reduction in OPR provides additional policy stimulus to accelerate the pace of the economy. It was also mentioned they will continue to utilize policy levers as appropriate for a sustainable economic recovery. Malaysia's CPI fell 1.9% YoY in the month of June-20 (May-20: -2.9% YoY, consensus: -1.8% YoY), led by the drop in the transport component on lower fuel prices. CPI could turn less negative from hereon, as oil price trajectory pointing further recovery in RON95 prices through year-end. However, demand-pull pressures should remain muted, given headwinds of 2H20 consumer recovery from continuing social distancing, soft labor market and high household debt. Malaysia's unemployment rate in May-20 increased to 5.3% (April-20:5.0%) as the number of unemployed person rose by 47,300 to 826,100 individuals. The statistics department now project the full year unemployment rate at 3.5 – 5.5%, which shows that the jobless rate may get worse before getting better.

For MYR fixed income strategy, we expect BNM to act again in 2H2020 to secure a better economic recovery. Some parts of the MGS has already priced in a 25bps cut in September-20. Given that we are near the bottom of the rate cycle, and low interest rate is likely to stay for another 12 to 18 months pending a meaningful recovery, we are gradually shifting to higher grade corporates for better yield pick-up.

RISKS

All investment carries some form of risks. The potential key risks include but are not limited to the following:

<p>Market risk</p>	<p>Market risk is the risk of negative movement that affects the price of all assets in a particular capital market. The factors influencing the performance of the markets include:</p> <ul style="list-style-type: none"> • Economic and financial market conditions • Political change • Broad investor sentiment • Movements in interest rate and inflation • Currency risks <p>Stock values fluctuate in response to the activities and performance of individual companies and general market or economic conditions. Such movements in the underlying values of the share of the investment portfolio will cause the NAV or prices of units to fall as well as rise. Market risk is mitigated through careful selection of securities and diversification through spreading of risk across a basket of assets and/or sectors.</p>
<p>Interest rate risk</p>	<p>Interest rates are inclined to fluctuate over time. A rise in the general level of interest rates will result in a decline of the value of all bonds and fixed interest securities. Hence a bond fund's NAV will most probably decrease with the rise of interest rates. Maintaining an appropriate diverse mix of assets with different yield and maturity profiles will lessen the impact of interest rate risk.</p>
<p>Liquidity risk</p>	<p>Liquidity risk is defined as the ease with which a security can be sold at or near its fair value depending on the volumes traded on the market. Liquidity risk is mitigated through the selection of stocks with an active trading volume in the open market. This ensures that exit strategies can be executed with little/minimal impacts to price fluctuations.</p>
<p>Company or security specific risk</p>	<p>There are many specific risks, which apply to individual companies or securities. Examples include the possible effect on a company of losing a key executive or the unforeseen entry of a new competitor into the market. The risk is mitigated by conducting in-house periodic reviews and analysis. In-house analysis is then supplemented by periodic reviews from rating agencies and market analysts.</p>
<p>Credit risk</p>	<p>Credit risk refers to an issuer's ability to make timely payments of profit and principal. In the event that the issuer of the instrument is faced with financial difficulties, leading to a decrease in their credit worthiness (i.e Bond prices will change/drop in the event of rating downgrade) and default in the payment of profit and principal, the value of the fund may be adversely affected. Credit risk is mitigated by conducting in-house periodic reviews and analysis. In-house analysis is then supplemented by periodic reviews from rating agencies and market analysts.</p>
