#### FUND MANAGER'S COMMENTS

The Fund was up 0.84% in MYR terms in May, underperforming the benchmark by 25bps. YTD, the Fund is down 9.23%, underperforming the benchmark by 200bps.

Developed markets had another volatile month ending flat for S&P 500 Index (-0.38%), MSCI Europe (+0.69%) and MSCI Japan (+0.93%) MTD in local currency terms. The US Dollar came off from peak weakened by 2% and Euro strengthened. Japanese Yen stabilized at 128-130 range. US 10-year bond yield came down to 2.93% at the time of writing. The Fed balance sheet reduction will start in June with a monthly cap of \$47.5m for treasuries, agency debt and MBS before increasing to \$95m after 3 months.

US manufacturing PMI slowed on cooling demand, material shortages and delivery delays. Inflation cost continued to accelerate. Business confidence declined to lowest level since October 2020. US consumer sentiment also declined on inflation concerns. However, employment is still strong with better-than-expected nonfarm payrolls in May. Europe PMI declined on weaker demand and high inflation. Japan PMI was unchanged from the previous month, but firms are increasing hiring as the backlog of work accelerated. On the other hand, forward 12m corporate earnings are revised up for all developed markets, led by Europe. But the positive earnings revisions mainly come from Energy and Materials sectors.

As geopolitical tensions and supply disruptions may continue to put upward pressure on commodity prices, inflation may continue to be a concern. Potential risks to economy may also come from the pace of monetary tightening and potential policy mistake. We have added commodity and energy exposure to hedge inflation risk. Overall, we maintain neutral allocations to all markets as we expect the issues of when inflation would moderate, the pace of its moderation, the Fed's tightening path and geopolitical tensions to weigh on markets in the short-term.

## RISKS

All investment carries some form of risks. The potential key risks include but are not limited to the following:

<b>Market risk</b>	Market risk refers to the possibility that an investment will lose value because of a general decline in financial markets, due to economic, political and/or other factors, which will result in a decline in the target fund's NAV.
<b>Stock specific risk</b>	Prices of a particular stock may fluctuate in response to the circumstances affecting individual companies such as adverse financial performance, news of a possible merger or loss of key personnel of a company. Any adverse price movements of such stock will adversely affect the target fund's NAV.
<b>Country risk</b>	Investments of the target fund in any country may be affected by changes in the economic and political climate, restriction on currency repatriation or other developments in the law or regulations of the countries in which the target fund invests. For example, the deteriorating economic condition of such countries may adversely affect the value of the investments undertaken by the target fund in those affected countries. This in turn may cause the NAV of the target fund or prices of units to fall.
<b>Currency risk</b>	As the investments of the target fund may be denominated in currencies other than base currency, any fluctuation in the exchange rate between the base currency and the currencies in which the investments are denominated may have an impact on the value of these investments. You should be aware that if the currencies in which the investments are denominated depreciate against the base currency, this will have an adverse effect on the NAV of the target fund and vice versa. You should note that any gains or losses arising from the fluctuation in the exchange rate may further increase or decrease the returns of the investment.
<b>Fund manager's risk</b>	Since the target fund invests into collective investment scheme managed by another manager, the fund manager has absolute discretion over the fund's investment technique and knowledge, operational controls and management. In the event of mismanagement of the fund and/or the management company, the NAV of the target fund, which invests into the fund would be affected negatively. Although the probability of such occurrence is minute, should the situation arise, Principal (S) will seek for an alternative collective investment scheme that is consistent with the objective of the target fund.

### RISKS (CONTINUED)

All investment carries some form of risks. The potential key risks include but are not limited to the following:

#### **Credit and default risk**

Investments of the target fund may involve a certain degree of credit and default risk. Generally, credit and default risk is the risk of loss due to the counterparty's and/or issuer's non-payment or untimely payment of the investment amount as well as the returns on investment. Principal (S) aims to mitigate this risk by performing fundamental credit research and analysis to determine the creditworthiness of its counterparty and/or issuer.
