FUND MANAGER'S COMMENTS

- The US Federal Reserve signalled that they plan to speed up tapering of bond purchases, which would pave the way for several rate hikes in 2022. The Fed Chair stated that inflation was a key risk to economic recovery and is looking to tame runaway inflation.
- US core PCE reading in December 2021 came in 4.7%, higher than initial estimates of 4.5% as well as the previous month's reading of 4.1%. Weekly jobless claims fell. Rising inflationary pressure and tighter labour market conditions, coupled with the Fed's tapering stance, suggests upward pressure for rates.
- While there were increasing signs of policy relaxation by Chinese authorities, sentiment was tampered by news flows in the property space which saw credit rating downgrades and debt restructuring by property developers.
- There have been encouraging signs by the Chinese government in containing the fallout from the widening debt crisis engulfing the nation's real estate industry. Most recently, we have seen a bailout of a property developer by a unit of a local state regulator, a move seen to revive confidence back into the sector.
- Central banks in Thailand, Indonesia and the Philippines held their key interest rates steady to help entrench economic recoveries that are picking up pace as Southeast Asia's worst Covid outbreaks recede.

STRATEGY:

- Global bond yields are expected to remain volatile as markets grappled over rising inflationary concerns with threat posed by the new Covid-19 variant. Short-term global bond yields are expected to remain under pressure while long-term yields should remain supported.
- Remain cautious on Chinese HY properties names and prudent on credit selection in light of the negative headlines. We had trimmed down exposure to Shimao to 1%.
- Cash level is at about 8% now, with the Fund intending to stay defensive in 1Q22. As such, duration has been shortened to 4 years. The current fixed income yield is at 4.9%. The breakdown of IG versus HY and unrated bonds remains at 60% and 12% respectively.

RISKS

All investment carries some form of risks. The potential key risks include but are not limited to the following:

Market risk	Market risk refers to the possibility that an investment will lose value because of a general decline in financial markets, due to economic, political and/or other factors, which will result in a decline in the target fund's NAV.
Liquidity risk	Liquidity risk refers to two scenarios. The first scenario is where an investment cannot be sold due to unavailability of a buyer for that investment. The second scenario exists where the investment, by its nature, is thinly traded. This will have the effect of causing the investment to be sold below its fair value which would adversely affect the NAV of the target fund.
Credit and default risk	Credit risk relates to the credit worthiness of the issuers of the bonds or money market instruments ("Investment") and their expected ability to make timely payment of interest and/or principal. Any adverse situations faced by the issuer may impact the value as well as liquidity of the Investment. In the case of rated investment, this may lead to a credit downgrade. Default risk relates to the risk of an issuer of the Investment either defaulting on payments or failing to make payments in a timely manner which will in turn adversely affect the value of the Investment. This could adversely affect the value of the target fund.
Interest rate risk	This risk refers to the impact of interest rate changes on the valuation of bonds or money market instruments ("Investment"). When interest rates rise, the investment prices generally decline and this may lower the market value of the Investment. The reverse may apply when interest rates fall.
Currency risk	<p>As the Investments of the target fund may be denominated in currencies other than the base currency, any fluctuation in the exchange rate between the base currency and the currencies in which the investments are denominated may have an impact on the value of these investments. Investors should note that any gains or losses arising from the fluctuation in the exchange rate may further increase or decrease the returns of the investment.</p> <p><u>Currency risk at the target fund level</u> The impact of the exchange rate movement between the base currency of the target fund and the currency of the underlying investments may result in a depreciation of the value of the investments as expressed in the base currency of the target fund.</p>

RISKS

All investment carries some form of risks. The potential key risks include but are not limited to the following:

Structured products risk

The NAV of the target fund will be impacted by the valuation of the structured product. Factors that may impact the valuation of the structured products will include, but not be limited to movement of the underlying assets, volatility of the underlying assets, interest rate levels, the correlation of the underlying assets and other such factors. Any change in the aforesaid factors would either positively or negatively impact the valuation of the structured products, hence impacting the NAV of the target fund. As such, the target fund's NAV will be exposed to potential price volatility, which will be dependent on the valuation of the structured products that the target fund invested in.

Country risk

Investments of the target fund in any country may be affected by changes in economic and political climate, restriction on currency repatriation or other developments in the law or regulations of the countries in which the target fund invests. For example, the deteriorating economic condition of such countries may adversely affect the value of the investments undertaken by the target fund in those affected countries. This in turn may cause the NAV of the target fund or prices of units to fall.

Regulatory risk

The investments of the target fund would be exposed to changes in the laws and regulations in the countries the target fund is invested in. These regulatory changes pose a risk to the target fund as it may materially impact the investments of the target fund. In an effort to manage and mitigate such risk, the fund manager seeks to continuously keep abreast of regulatory developments (for example, by closely monitoring announcements on regulators' website and mainstream media) in that country. The fund manager may dispose its investments in that particular country should the regulatory changes adversely impact the investors' interest or diminish returns to the target fund.
