FUND MANAGER'S COMMENTS

Market Review

During the month, the overall MGS yield curve shifted lower across all tenors by 2-11 bps with the largest movement seen for the belly of the curve (-10 to -15bps). The 7y and the 10y MGS moved the most as both tenors moved lower by 11bps during the month. Market sentiment was boosted following the FTSE Russell announcement to maintain Malaysia in the WGBI at the end of March and followed through during the month. The 3-, 5-, 7-, 10-, 15-, 20- and 30-year MGS yields closed at 2.35% (-2bps), 2.65% (-10bps), 2.98% (-11bps), 3.14% (-11bps), 3.93% (-7bps), 4.14% (-9bps) and 4.31% (-7bps) respectively at the end of April.

Outlook & Strategy

For domestic economic data, BNM projects for the economy to recover in 2021 with growth ranging between 6.0-7.5%. Growth will be underpinned by stronger external demand and higher private and public expenditure. The central bank expects monetary policy in 2021 to remain accommodative to support an enhanced and sustained economic growth. Headline inflation pressure will be transitory while core inflation projection to be between 0.5 – 1.5% amid spare capacity in the economy. Exports grew stronger by 31% YoY from RM87.6bil in February to RM104.95bil in March, mainly fueled by the low base effect as well as broad-based growth across sectors. For 1Q2021, total trade grew 14.8% from 1Q2020 whilst trade surplus expanded 58.6% to RM58.7bil. Malaysia's CPI rose 1.7% YoY (February: +0.1% YoY) led by a 9.8% increase in the CPI's transport segment as fuel prices rose. Meanwhile, the CPI in the first quarter of 2021 (1Q21) grew 0.5% from a year earlier, and 1.8% on a QoQ basis.

For MYR fixed income strategy, we are more upbeat with bonds in 2Q21 in view of sustained UST yields below 1.70%. There is also lack of drivers for higher US yields seeing there is a lack of stimulus news other than President Biden saying an infrastructure spending package with only scant details for the time being. Domestically, the main challenge that is still weighting on bond market sentiment is the ongoing pension withdrawal concern. While RM32.7bn (out of the RM52.5bn approved withdrawal) has already been credited to members of the pension plan, bulk of withdrawal pressure is likely to be in 2Q2021 and should anchor the bond yield steeper than regional peers. While MGS term spreads tested higher again in 1Q21 amidst global bond rout and challenging fundamental in domestic economies, the steeper curve now may start to attract real money foreign investors as policy tightening is unexpected to arrive until 1H2022. We now look forward to 3Q21 to be the window for long-end term spreads to tighten closer to long-term average. The risk to our forecast is the unexpected delay is global and domestic recovery, higher funding requirement for fiscal stimulus and any potential political risks.

RISKS

All investment carries some form of risks. The potential key risks include but are not limited to the following:

Market risk	<p>Market risk is the risk of negative movement that affects the price of all assets in a particular capital market. The factors influencing the performance of the markets include:</p> <ul style="list-style-type: none">• Economic and financial market conditions• Political change• Broad investor sentiment• Movements in interest rate and inflation• Currency risks <p>Securities values fluctuate in response to the activities and performance of individual companies and general market or economic conditions. Such movements in the underlying values of the securities of the investment portfolio will cause the NAV or prices of units to fall as well as rise. Market risk is mitigated through careful selection of securities and diversification through spreading of risk across a basket of assets and/or sectors.</p>
Interest rate risk	<p>Interest rates are inclined to fluctuate over time. A rise in the general level of interest rates will result in a decline of the value of all bonds and fixed interest securities. Hence a bond fund's NAV will most probably decrease with the rise of interest rates. Maintaining an appropriate diverse mix of assets with different yield and maturity profiles will lessen the impact of interest rate risk.</p>
Liquidity risk	<p>Liquidity risk is defined as the ease with which a security can be sold at or near its fair value depending on the volumes traded on the market. Liquidity risk is mitigated through the selection of stocks with an active trading volume in the open market. This ensures that exit strategies can be executed with little/minimal impacts to price fluctuations.</p>
Company or security specific risk	<p>There are many specific risks, which apply to individual companies or securities. Examples include the possible effect on a company of losing a key executive or the unforeseen entry of a new competitor into the market. The risk is mitigated by conducting in-house periodic reviews and analysis. In-house analysis is then supplemented by periodic reviews from rating agencies and market analysts.</p>
Credit risk	<p>Credit risk refers to an issuer's ability to make timely payments of profit and principal. In the event that the issuer of the instrument is faced with financial difficulties, leading to a decrease in their credit worthiness (i.e Bond prices will change/drop in the event of rating downgrade) and default in the payment of profit and principal, the value of the fund may be adversely affected. Credit risk is mitigated by conducting in-house periodic reviews and analysis. In-house analysis is then supplemented by periodic reviews from rating agencies and market analysts.</p>
