Telkom Indonesia Persero Tbk PT	2.6%
Swire Pacific Limited - CL A	1.7%
China Mengniu Dairy Co Ltd	1.6%

## PERFORMANCE RECORD

This fund feeds into Affin Hwang AII MAN Select Income Fund ("target fund") with the objective to provide investors with regular income stream through Shariah-compliant investments. The target fund will invest in a diversified portfolio of Sukuks, Shariah-compliant equities and Islamic money market instruments.

Table below shows the investment returns of Sun Life Malaysia AII MAN Select Income Fund versus its benchmark as at 31 May 2022:

%	YTD	1M	6M	1-Year	3-Years	5-Years	Since Inception
<b>Fund*</b>	-3.80	0.22	-4.57	-5.98	2.96	8.44	17.80
<b>Benchmark</b>	-1.26	-1.16	-0.80	-1.62	4.99	7.69	14.53

## FUND MANAGER'S COMMENTS

- The broader MSCI AC Asia ex-Japan index rallied 1.3% higher in May on tentative signs of reopening in China as well as stimulus optimism. Shanghai authorities announced that it would cancel many restrictions on businesses, easing a city-wide lockdown that began two months ago.
- The FBM100 index fell 1.9% in May as a lack of catalysts led to choppy trading. After 4 consecutive months of buying, foreign investors turned net sellers in May as a stronger US dollar resulted in foreigners adopting a risk-off stance on emerging markets.
- Local bond yields moved lower in May in tandem with the decrease in UST. The benchmark 10Y ending the month at 4.19%, falling 19 bps from the previous month. Current yield levels implies that markets are already pricing in 5-6 rate hikes by BNM.
- BNM raised the Overnight Policy Rate by 25 bps from 1.75% to 2.00%, the first time since Jan 2018. BNM cited that the economic growth is on a firmer footing, driven by strengthening domestic demand amidst sustained export growth, further underpinned by the transition to endemicity and further easing of restrictions as well as the reopening of international borders.

### STRATEGY:

- The fund's fixed income exposure was slightly increased to around 61%, while equity exposure was reduced to around 29%.
- Bank Negara Malaysia raised the Overnight Policy Rate by 25bps to 2.00% in May, marking the first rate hike since Jan 2018, signalling a positive and pre-emptive move as BNM has a more positive view on Malaysia's economic outlook moving forward.
- We expect BNM to continue to hike rate in the 2H2022 by another 25-50bps but any further rate hike will be on a gradual manner and subject to the economic conditions which Bank Negara is closely monitoring.
- Risk-reward has turned attractive, but we are mindful of volatile UST, potential foreign outflows and higher government spending on subsidies amidst rising food and energy prices. Furthermore, the larger than expected EPF withdrawal would impact the demand dynamics in the local bond market.
- *Rates strategy:* US Treasuries volatility, weaker demand dynamics and large bond supply will likely see a volatile rates environment - maintain a trading stance for government bonds
- *Credit strategy:* Prefer stronger and higher rated names, and to participate in primary issuances for better yield.
- *Duration strategy:* We take a defensive stance and target for a neutral duration (1x of benchmark duration).
- For equities, we have added defensive names in Malaysia and Indonesia through telecommunication sector.

## RISKS

All investment carries some form of risks. The potential key risks include but are not limited to the following:

<b>Manager's Risk</b>	This risk refers to the day-to-day management of the target fund by Affin Hwang which will impact the performance of the target fund. For example, investment decisions undertaken by Affin Hwang as a result of an incorrect view of the market or any non-compliance with internal policies, investment mandate, the deed, relevant law or guidelines due to factors such as human error, fraudulent, dishonesty or weaknesses in operational process and systems, may adversely affect the performance of the target fund.
<b>Inflation Risk</b>	This is the risk that your investment in the target fund may not grow or generate income at a rate that keeps pace with inflation. This would reduce your purchasing power even though the value of the investment in monetary terms has increased.
<b>Credit/Default risk</b>	Credit risk relates to the creditworthiness of the issuers of the investment (Sukuk and Islamic money markets instruments) and their expected ability to make timely payment of profit and/or principal. Any adverse situations faced by the issuers may impact the value as well as liquidity of the investment. In the case of rated investments, this may lead to a credit downgrade. Default risk relates to the risk of an issuer of the investment either defaulting on payments or failing to make payments in a timely manner which will in turn adversely affect the value of the investment. This could adversely affect the value of the target fund.
<b>Counterparty risk</b>	This risk concerns with the target fund's investment in Shariah-compliant derivatives where the other party in an agreement may default on the terms of the agreement. Generally, counterparty risk can be reduced by emphasis on credit analysis of the counterparty to determine its creditworthiness.
<b>Interest rate risk</b>	<p>Interest rate risk refers to the impact of interest rate changes on the valuation of Sukuk. When interest rates rise, Sukuk's prices generally decline and this may lower the market value of the target fund's investment in Sukuk. The reverse may apply when interest rates fall. In order to mitigate interest rate risk, Affin Hwang will need to manage the debt portfolio taking into account the coupon rate and time to maturity of the Sukuk.</p> <p>Note: Interest rate is a general indicator that will have an impact on the management of the target fund regardless of whether it is a Shariah-based fund or otherwise. It does not in any way suggest that the target fund will invest in conventional financial instruments.</p>
<b>Stock Specific Risk</b>	Prices of a particular Shariah-compliant stock may fluctuate in response to the circumstances affecting individual companies such as adverse financial performance, news of a possible merger or loss of key personnel of a company. Any adverse price movements of such Shariah-compliant stock will adversely affect the target fund's NAV.
<b>Shariah-compliant warrants investment risk</b>	The value of the Shariah-compliant warrants will depend on the pricing of the underlying security whereby the growth and performance prospect of the underlying security would consequentially affect the value of the Shariah-compliant warrants. In addition, the value of the Shariah-compliant warrants may decrease exponentially as the Shariah-compliant warrants approach their maturity date and the potential gains from a favourable price movement of the underlying security may be offset by aggressive time decay. Affin Hwang may consider unwinding these Shariah-compliant warrants if there are material adverse changes to its value with the aim to mitigate the risk.

## RISKS (CONTINUED)

<b>Liquidity risk</b>	Liquidity risk arises in two scenarios. The first scenario is where an investment cannot be sold due to unavailability of a buyer for that investment. The second scenario exists where the investment, by its nature, is thinly traded. This will have the effect of causing the investment to be sold below its fair value which would adversely affect the NAV of the target fund.
<b>Currency risk</b>	As the investments of the target fund may be denominated in currencies other than the base currency, any fluctuation in the exchange rate between the base currency and the currencies in which the investments are denominated may have an impact on the value of these investments. You should note that any gains or losses arising from the fluctuation in the exchange rate may further increase or decrease the returns of the investment.
<b>Regulatory risk</b>	The investments of the target fund will be exposed to changes in the laws and regulations in the countries the target fund is invested in. These regulatory changes pose a risk to the target fund as it may materially impact the investments of the target fund. In an effort to manage and mitigate such risk, Affin Hwang seeks to continuously keep abreast of regulatory developments (for example, by closely monitoring announcements on regulators' website and mainstream medias) in that country. Affin Hwang may dispose its investments in that particular country should the regulatory changes adversely impact the unit holders' interest or diminish returns to the target fund.
<b>Country risk</b>	Investments of the target fund in any country may be affected by changes in the economic and political climate, restriction on currency repatriation or other developments in the law or regulations of the countries in which the target fund invests in. For example, the deteriorating economic condition of such countries may adversely affect the value of the investments undertaken by the target fund in those affected countries. This in turn may cause the NAV of the target fund to fall.
<b>Reclassification of Shariah status risk</b>	This risk refers to the risk that the currently held Shariah-compliant equities in the target fund may be reclassified to be Shariah non-compliant in the periodic review of the equities by the Shariah Advisory Council of the Securities Commission Malaysia (SACSC), the Shariah Adviser or the Shariah boards of the relevant Islamic indices. If this occurs, Affin Hwang will take the necessary steps to dispose of such equities. There may be opportunity loss to the target fund due to the target fund not being allowed to retain the excess capital gains derived from the disposal of the Shariah non-compliant equities. Affin Hwang will be required to dispose of these equities immediately if the prices are above the purchase price. Should the prices be below the purchase price, Affin Hwang may choose to hold on to these holdings until the prices meet the purchase price. Nevertheless, should Affin Hwang decide to dispose of these equities below the purchase price, the target fund will be faced with the risk of realising its losses, thus negatively impacting the NAV of the target fund.
