FUND MANAGER'S COMMENTS

The Fund (Class MYR) increased by 1.08% during the month of Jun 2021, outperforming the benchmark by 6bps.

Developed markets' performance diverged in mid-June after the Federal Reserve indicated a possible early tapering and potentially 2 rate hikes in 2023 even though it still sees inflation as transitory. S&P 500 Index returned 2.77% in June whereas MSCI Europe and Japan Index returned -1.29% and -0.81%, all in MYR terms. Following the slightly more hawkish Fed's stance, US Dollar strengthened by 2.9% whereas Euro and Japanese yen depreciated by 3% and 1.4%.

US and Europe (including UK) manufacturing PMIs continue to stay at very positive levels with faster vaccination rollout and ease of restrictions. Japan PMI is edging slightly lower due to the recent announced state of emergencies and movement restrictions. However, it's showing resilience and is expected to recover as Japan vaccine rollout gathers pace. The 12m forward corporate earnings are revised higher for all developed markets led by US (+3.1%) and Japan (+2.1%). Eurozone inflation rise to 2% YoY and US inflation surged to 5% YoY in May. While we maintain our view that the rise in inflation is transitory since unemployment rate is still high, we need to keep an eye on signs of sustained inflationary pressures. Volatility in equities market will ensue when inflation concern and tapering expectations build. Inflation could stay elevated for a little longer given booming demand, supply bottlenecks and budding wage pressures.

We maintain overweight in all developed markets as we think developed economies would continue to lead global economic growth because of their faster vaccination pace. So far, the evidence from UK has shown that the Delta Variant has not caused significantly higher death or hospitalizations, which suggest the vaccines still work as protection. Therefore, this would allow developed economies to continue the pace of reopening. We are mostly positive on US market mainly because of more positive corporate earnings outlook, followed by Europe and Japan. We expect more market volatility in coming months due to inflation and Fed tapering worries as we closely monitor the situation. However, developed markets would be in a better position from interest-rate increases and FX volatilities in the next 2-3 years. In addition, we think equities remain very attractive with strong investment returns way ahead of bond yields.

RISKS

All investment carries some form of risks. The potential key risks include but are not limited to the following:

Market risk	Market risk refers to the possibility that an investment will lose value because of a general decline in financial markets, due to economic, political and/or other factors, which will result in a decline in the target fund's NAV.
Stock specific risk	Prices of a particular stock may fluctuate in response to the circumstances affecting individual companies such as adverse financial performance, news of a possible merger or loss of key personnel of a company. Any adverse price movements of such stock will adversely affect the target fund's NAV.
Country risk	Investments of the target fund in any country may be affected by changes in the economic and political climate, restriction on currency repatriation or other developments in the law or regulations of the countries in which the target fund invests. For example, the deteriorating economic condition of such countries may adversely affect the value of the investments undertaken by the target fund in those affected countries. This in turn may cause the NAV of the target fund or prices of units to fall.
Currency risk	As the investments of the target fund may be denominated in currencies other than base currency, any fluctuation in the exchange rate between the base currency and the currencies in which the investments are denominated may have an impact on the value of these investments. You should be aware that if the currencies in which the investments are denominated depreciate against the base currency, this will have an adverse effect on the NAV of the target fund and vice versa. You should note that any gains or losses arising from the fluctuation in the exchange rate may further increase or decrease the returns of the investment.
Fund manager's risk	Since the target fund invests into collective investment scheme managed by another manager, the fund manager has absolute discretion over the fund's investment technique and knowledge, operational controls and management. In the event of mismanagement of the fund and/or the management company, the NAV of the target fund, which invests into the fund would be affected negatively. Although the probability of such occurrence is minute, should the situation arise, Principal (S) will seek for an alternative collective investment scheme that is consistent with the objective of the target fund.

RISKS (CONTINUED)

All investment carries some form of risks. The potential key risks include but are not limited to the following:

Credit and default risk

Investments of the target fund may involve a certain degree of credit and default risk. Generally, credit and default risk is the risk of loss due to the counterparty's and/or issuer's non-payment or untimely payment of the investment amount as well as the returns on investment. Principal (S) aims to mitigate this risk by performing fundamental credit research and analysis to determine the creditworthiness of its counterparty and/or issuer.
