FUND MANAGER'S COMMENTS

- The broader MSCI Asia ex Japan index fell 6.86% as tensions between US and China were rekindled. The relative lull between US and China was pierced through after US military firefighter jets shot down a suspected spy balloon owned by China. The MSCI China index plunged 10.24%, while the Hang Seng index lost 9.41%.
- On the domestic front, the benchmark KLCI edged 2.11% lower as market reaction to Budget 2023 was neutral. In his budget speech, Prime Minister cum Finance Minister Datuk Seri Anwar Ibrahim emphasised fiscal discipline and vowed to bring down the country's fiscal deficit to 5.00% of GDP.
- UST selloffs have been unexpectedly sharp. Regional yields are exposed to hawkish Fed, but offer relative resilience given divergence in central bank directions vs Fed, including BNM. At the same time, US labour market remain very strong as U/R continue to drop to all time low at 3.4%. With that, Fed is likely to continue being hawkish with fading signs of a hard landing. In line with the hawkish sentiment, MGS yields shifted higher but at a lesser extent than the global DM rates with dip buying interests seen supporting the overall curve. 10-year MGS yields ended the month at 3.93% (+13bps).
- Malaysia's 4Q22 GDP was strong at +7% YoY. This brings to full year GDP growth in FY2022 to +8.7% vs. government earlier forecast of 6.5 - 7.0%. Private consumption remain the key driver of growth accounted for 62% of 4Q22 and 76% of FY22 growth, respectively. Nonetheless, we expect growth to moderate in FY2023 as pent-up demand normalises & support from stimulus measures taper. Consumer spending and tourism recovery to provide some support.
- Malaysia's Jan headline and core CPI eased to 3.7% and 3.9%, respectively (Dec 2022: Headline 3.8% and core 4.1%). In Budget 2023, inflation forecast range was revised to 2.8-3.8% for 2023 (previous 2.8-3.3%). No further details on transition to targeted subsidy mechanism. Expect CPI to moderate to c.3.0% in 2023 (assuming subsidies remain unchanged) which will give room for BNM to be less aggressive on the policy rate.

STRATEGY:

- Recent sets of strong economic data in US have readjusted market expectation of peak terminal rate and led to hawkish repricing. Given the accumulated impact of policy tightening and lagged impact on the economy, current strength in economic data is expected to taper off. Overall, we still expect weaker growth globally, but more clarity will be seen in the 2H of the year.
- Meanwhile, Malaysia's economic growth is expected to moderate in 2023 with downside risks from external development. With no clear indication on timeline for transition to targeted subsidy mechanism and BNM's clear focus on growth, we maintain our OPR call of 2.75% - 3.00% for 2023
- The fund's fixed income exposure was kept at around 69%, while equity exposure was slightly reduced to around 27%. For equities, we are positive on banks, which we expect to see healthy loans growth and improving asset quality. We continue to like technology companies, where we see attractive value emerging after the recent heavy selloff, driven by structural growth trends (e.g. 5G, EV, solar energy).

RISKS

All investment carries some form of risks. The potential key risks include but are not limited to the following:

Manager's Risk	This risk refers to the day-to-day management of the target fund by Affin Hwang which will impact the performance of the target fund. For example, investment decisions undertaken by Affin Hwang as a result of an incorrect view of the market or any non-compliance with internal policies, investment mandate, the deed, relevant law or guidelines due to factors such as human error, fraudulent, dishonesty or weaknesses in operational process and systems, may adversely affect the performance of the target fund.
Inflation Risk	This is the risk that your investment in the target fund may not grow or generate income at a rate that keeps pace with inflation. This would reduce your purchasing power even though the value of the investment in monetary terms has increased.
Credit/Default risk	Credit risk relates to the creditworthiness of the issuers of the investment (Sukuk and Islamic money markets instruments) and their expected ability to make timely payment of profit and/or principal. Any adverse situations faced by the issuers may impact the value as well as liquidity of the investment. In the case of rated investments, this may lead to a credit downgrade. Default risk relates to the risk of an issuer of the investment either defaulting on payments or failing to make payments in a timely manner which will in turn adversely affect the value of the investment. This could adversely affect the value of the target fund.
Counterparty risk	This risk concerns with the target fund's investment in Shariah-compliant derivatives where the other party in an agreement may default on the terms of the agreement. Generally, counterparty risk can be reduced by emphasis on credit analysis of the counterparty to determine its creditworthiness.
Interest rate risk	<p>Interest rate risk refers to the impact of interest rate changes on the valuation of Sukuk. When interest rates rise, Sukuk's prices generally decline and this may lower the market value of the target fund's investment in Sukuk. The reverse may apply when interest rates fall. In order to mitigate interest rate risk, Affin Hwang will need to manage the debt portfolio taking into account the coupon rate and time to maturity of the Sukuk.</p> <p>Note: Interest rate is a general indicator that will have an impact on the management of the target fund regardless of whether it is a Shariah-based fund or otherwise. It does not in any way suggest that the target fund will invest in conventional financial instruments.</p>
Stock Specific Risk	Prices of a particular Shariah-compliant stock may fluctuate in response to the circumstances affecting individual companies such as adverse financial performance, news of a possible merger or loss of key personnel of a company. Any adverse price movements of such Shariah-compliant stock will adversely affect the target fund's NAV.
Shariah-compliant warrants investment risk	The value of the Shariah-compliant warrants will depend on the pricing of the underlying security whereby the growth and performance prospect of the underlying security would consequentially affect the value of the Shariah-compliant warrants. In addition, the value of the Shariah-compliant warrants may decrease exponentially as the Shariah-compliant warrants approach their maturity date and the potential gains from a favourable price movement of the underlying security may be offset by aggressive time decay. Affin Hwang may consider unwinding these Shariah-compliant warrants if there are material adverse changes to its value with the aim to mitigate the risk.

RISKS (CONTINUED)

Liquidity risk

Liquidity risk arises in two scenarios. The first scenario is where an investment cannot be sold due to unavailability of a buyer for that investment. The second scenario exists where the investment, by its nature, is thinly traded. This will have the effect of causing the investment to be sold below its fair value which would adversely affect the NAV of the target fund.

Currency risk

As the investments of the target fund may be denominated in currencies other than the base currency, any fluctuation in the exchange rate between the base currency and the currencies in which the investments are denominated may have an impact on the value of these investments. You should note that any gains or losses arising from the fluctuation in the exchange rate may further increase or decrease the returns of the investment.

Regulatory risk

The investments of the target fund will be exposed to changes in the laws and regulations in the countries the target fund is invested in. These regulatory changes pose a risk to the target fund as it may materially impact the investments of the target fund. In an effort to manage and mitigate such risk, Affin Hwang seeks to continuously keep abreast of regulatory developments (for example, by closely monitoring announcements on regulators' website and mainstream medias) in that country. Affin Hwang may dispose its investments in that particular country should the regulatory changes adversely impact the unit holders' interest or diminish returns to the target fund.

Country risk

Investments of the target fund in any country may be affected by changes in the economic and political climate, restriction on currency repatriation or other developments in the law or regulations of the countries in which the target fund invests in. For example, the deteriorating economic condition of such countries may adversely affect the value of the investments undertaken by the target fund in those affected countries. This in turn may cause the NAV of the target fund to fall.

Reclassification of Shariah status risk

This risk refers to the risk that the currently held Shariah-compliant equities in the target fund may be reclassified to be Shariah non-compliant in the periodic review of the equities by the Shariah Advisory Council of the Securities Commission Malaysia (SACSC), the Shariah Adviser or the Shariah boards of the relevant Islamic indices. If this occurs, Affin Hwang will take the necessary steps to dispose of such equities. There may be opportunity loss to the target fund due to the target fund not being allowed to retain the excess capital gains derived from the disposal of the Shariah non-compliant equities. Affin Hwang will be required to dispose of these equities immediately if the prices are above the purchase price. Should the prices be below the purchase price, Affin Hwang may choose to hold on to these holdings until the prices meet the purchase price. Nevertheless, should Affin Hwang decide to dispose of these equities below the purchase price, the target fund will be faced with the risk of realising its losses, thus negatively impacting the NAV of the target fund.
