FUND MANAGER'S COMMENTS

Developed markets rally was stopped by the concerns over the new Omicron variant and the more hawkish comment from Fed Chairman Powell. S&P 500, MSCI Europe and MSCI Japan declined by 0.7%, 2.5% and 2.9% respectively in local currency terms. US equity market fared better as investors flew to safety. The US Dollar appreciated by 2% MTD with Japanese Yen flat and Euro depreciated by 2%. US 10-year bond yield has risen over the month but recently came down to 1.5% at the time of writing.

Manufacturing PMIs have held up well across all developed markets, all in expansion zone. With increasing vaccinations and easing COVID restrictions, Japan's economy continues to recover with PMI edged higher in November. Business confidence and employment is also improving. The 12m forward corporate earnings were revised higher for US and Japan with Europe staying flat.

We are monitoring closely the vaccine effectiveness and severity of the new Omicron variant. Whether global economy will continue its recovery trend from the pandemic depends on whether existing vaccines can prevent severe cases and hospitalizations against Omicron. Even if current vaccines do not work effectively, vaccine providers have indicated their ability to quickly produce new vaccines. However, more details need to be confirmed in coming weeks. Whether Omicron could derail a robust economic recovery could also affect Fed's monetary decision. Equity markets may see short-term volatility if Fed decides to taper at a faster pace and bring forward the interest hike. Before we get more clarity on Omicron, our base case is to continue expect above trend growth across all developed markets moving to 2022. We are seeing resilient retail and employment data from US. If the supply chain bottlenecks continue to ease, Japan manufacturing sectors will continue to recover. We are overweight US and Japan on resilient earnings outlook. We are neutral on Europe, where a rising fourth wave has forced countries to implement different movement restrictions that will adversely impact consumer sentiment. On an overall basis, we remain overweight in developed equity markets.

RISKS

All investment carries some form of risks. The potential key risks include but are not limited to the following:

Market risk	Market risk refers to the possibility that an investment will lose value because of a general decline in financial markets, due to economic, political and/or other factors, which will result in a decline in the target fund's NAV.
Stock specific risk	Prices of a particular stock may fluctuate in response to the circumstances affecting individual companies such as adverse financial performance, news of a possible merger or loss of key personnel of a company. Any adverse price movements of such stock will adversely affect the target fund's NAV.
Country risk	Investments of the target fund in any country may be affected by changes in the economic and political climate, restriction on currency repatriation or other developments in the law or regulations of the countries in which the target fund invests. For example, the deteriorating economic condition of such countries may adversely affect the value of the investments undertaken by the target fund in those affected countries. This in turn may cause the NAV of the target fund or prices of units to fall.
Currency risk	As the investments of the target fund may be denominated in currencies other than base currency, any fluctuation in the exchange rate between the base currency and the currencies in which the investments are denominated may have an impact on the value of these investments. You should be aware that if the currencies in which the investments are denominated depreciate against the base currency, this will have an adverse effect on the NAV of the target fund and vice versa. You should note that any gains or losses arising from the fluctuation in the exchange rate may further increase or decrease the returns of the investment.
Fund manager's risk	Since the target fund invests into collective investment scheme managed by another manager, the fund manager has absolute discretion over the fund's investment technique and knowledge, operational controls and management. In the event of mismanagement of the fund and/or the management company, the NAV of the target fund, which invests into the fund would be affected negatively. Although the probability of such occurrence is minute, should the situation arise, Principal (S) will seek for an alternative collective investment scheme that is consistent with the objective of the target fund.

RISKS (CONTINUED)

All investment carries some form of risks. The potential key risks include but are not limited to the following:

Credit and default risk

Investments of the target fund may involve a certain degree of credit and default risk. Generally, credit and default risk is the risk of loss due to the counterparty's and/or issuer's non-payment or untimely payment of the investment amount as well as the returns on investment. Principal (S) aims to mitigate this risk by performing fundamental credit research and analysis to determine the creditworthiness of its counterparty and/or issuer.
