FUND MANAGER'S COMMENTS

While one month is too short to form a trend, we observed that market in November 2024 has showed their preference on US market over the other developed market regions. The main reason is driven by the confirmation on Trump administration which could exert more uncertainties to other regions. NA region appeared as stronger positive performers in both USD and MYR basis which outperformed EU and APAC region notably. While near term we could anticipate investors' appetite to likely continue and benefit riskier assets in the US, we believe that market at some point could reverse when investors find tougher time to justify lofty stock valuations with much higher earnings growth expectations. With this being said, GSSE with its strong discipline on quality at reasonable valuation see a steady pathway to deliver stronger performance in 2025 attributing to strong investment holdings earnings growth outlook despite not be able to deliver much robust performance for the month. In November 2024 the MYR Class A delivered 1.05% which underperformed the benchmark by 439 bps.

By region, while negative selection in NA was a major detractor to the relative performance, positive contribution from EU and APAC was not enough to make up for the much stronger performance in NA where fund was less positioned. By sector, IT and Industrials have contributed positively to the relative performance more than offset by Healthcare and Consumer Discretionary which were influenced by headline news. Not having any exposure in Energy was also positive as oil price declined on weaker demand driven by China as forecasted by IEA and OPEC despite OPEC+ production cut extension.

The top contributors to the relative performance were Johnson Control and Pentair. Johnson Control delivered strong Q 4 earnings that beat internal guidance and street expectations. While new FY guidance was below street expectation on the surface level, it came much above with the adjustments on the business divestment impact and new restructuring plan. We believe that Co efforts to become a more consolidated commercial HVAC would show better earnings consistency which would be much appreciated by the investors. On the other hand, the bottom contributors to the relative performance were Tetra tech and Taiwan Semiconductor Manufacturing Co. Tetra tech posted quarterly earnings beat but new FY guidance was a slightly light of market's high expectations. Taiwan Semiconductor Manufacturing Co was negatively impacted by Semi industry in general as the space was used as a source of fund to rotate into Software industry.

RISKS

All investment carries some form of risks. The potential key risks include but are not limited to the following:

Returns not guaranteed	The investment of the fund is subject to market fluctuations and its inherent risk. There is NO GUARANTEE on the investment returns, nor any assurance that the target fund's investment objective will be achieved.
Market risk	The value of an investment will decrease or increase due to changes in market factors i.e. economic, political or other events that impact large portions of the market. Market risk cannot be eliminated, hence the target fund's investment portfolio may be prone to changing market conditions that may result in uncertainties and fluctuations in the value of the underlying of the target fund's investment portfolio, causing the NAV or prices of units to fluctuate.
Inflation risk	This is the risk that your investment in the target fund may not grow or generate income at a rate that keeps pace with inflation. This would reduce your purchasing power even though the nominal value of the investment in monetary terms has increased.
Manager's risk	This risk refers to the day-to-day management of the target fund by Nomura which will impact the performance of the target fund. For example, investment decisions undertaken by Nomura as a result of incorrect view of the market or any non-compliance with internal policies, investment mandate, the deed, relevant law or guidelines due to factors such as human error or weakness in operational process and systems may adversely affect the performance of the target fund. In order to mitigate this risk, the implementation of internal controls and a structured investment process and operational procedures has been put in place by Nomura.

RISKS (CONTINUED)

Country risk	The investment of the target fund may be affected by risk specific to the country in which it invests in. Such risks include changes in the country's economic, social and political environment. The value of the assets of the target fund may also be affected by uncertainties such as currency repatriation restrictions or other developments in the law or regulations of the country in which the target fund invest in.
Reclassification of Shariah Compliance Status	Shariah-compliant securities and instruments held by the target fund are subject to periodic review by the SAC of the SC, SAC of BNM, the Shariah boards of the relevant Islamic indices or the Shariah Adviser. These securities may be reclassified as non-compliant during such reviews and the target fund may need to take the necessary steps to dispose of such security or instrument, upon the advice of the Shariah Adviser. Consequently, the target fund may realise some losses in the disposal of the same or there may be opportunity loss for the target fund as the target fund may not be permitted to retain excess capital gains derived from such disposal.
Currency Risk	<p>As the Base Currency is denominated in USD and the currency denomination of the Classes may be denominated in other than USD, the Classes not denominated in USD are also exposed to currency risk. Any fluctuation in the exchange rates between USD and the currency denomination of the Class (other than Classes denominated in USD) will affect the Unit Holder's investments in those Classes (other than Classes denominated in USD). The impact of the exchange rate movement between the Base Currency and the currency denomination of the Class (other than Classes denominated in USD) may result in a depreciation of the Unit Holder's holdings as expressed in the Base Currency.</p> <p>In order to manage currency risk, Nomura may employ currency hedging strategies to fully or partially hedge the foreign currency exposure of the target fund's investments and/or the Classes not denominated in USD. Currency hedging may reduce the effect of the exchange rate movement for the Class being hedged but it does not entirely eliminate currency risk between the Class and the Base Currency. The unhedged portion of the Class will still be affected by the exchange rate movements and it may cause fluctuation of NAV of the Class. You should note that if the exchange rate moves favourably, the Class will not benefit from any upside in currency movement due to the hedging strategy. In addition, hedging is subject to a minimum size of entering into a hedging contract and the cost of hedging will be borne by the hedged class and may affect returns of the hedged class.</p>
Default Risk	Default risk relates to the risk that an issuer of a money market instrument either defaulting on payments or failing to make payments in a timely manner which will in turn adversely affect the value of the money market instruments. If the financial institution which the target fund places deposits with defaults in payment or become insolvent, the target fund may also suffer capital losses with regards to the capital invested and interest foregone, causing the performance of the target fund to be adversely affected This could affect the value of the target fund as up to 20% of the NAV of the target fund will be invested in Islamic deposits, Islamic money market instruments and/or held in cash.
