#### FUND MANAGER'S COMMENTS

Developed markets recovered slightly from previous month's losses. S&P 500, MSCI Europe and MSCI Japan rebounded by 3.7%, 1% and 4.9% respectively in local currency terms. The Federal Reserve delivered a 25bps rate hike in March as expected. The US Dollar appreciated by 1.7% MTD as the Fed indicated a more hawkish tone in monetary policy. Euro and Japanese Yen depreciated by 1.4% and 5.9%, respectively. US 10-year bond yield increased to 2.62% at the time of writing. The Bloomberg Commodity Index was up 8.6% MTD after coming down slightly from a sharp spike driven by the Russia-Ukraine conflict.

US manufacturing output continues to expand strongly driven by strong demand. On the other hand, Japan's manufacturing sector may be pressured as external demand may be dampened by the lockdown restrictions in China. Europe's PMI eased as geopolitical tensions weighed on demand. Forward 12m corporate earnings saw positive revisions across all developed markets.

We maintain our neutral position across all developed markets. Geopolitical tensions and supply disruptions may continue to put upward pressure on commodity prices and inflation. This may impact consumer demand. In addition, a more hawkish Fed and the possibility for balance sheet reduction may continue to push the US 10-year bond yield higher. These uncertainties will weigh on markets in the short-term.

## RISKS

All investment carries some form of risks. The potential key risks include but are not limited to the following:

<b>Market risk</b>	Market risk refers to the possibility that an investment will lose value because of a general decline in financial markets, due to economic, political and/or other factors, which will result in a decline in the target fund's NAV.
<b>Stock specific risk</b>	Prices of a particular stock may fluctuate in response to the circumstances affecting individual companies such as adverse financial performance, news of a possible merger or loss of key personnel of a company. Any adverse price movements of such stock will adversely affect the target fund's NAV.
<b>Country risk</b>	Investments of the target fund in any country may be affected by changes in the economic and political climate, restriction on currency repatriation or other developments in the law or regulations of the countries in which the target fund invests. For example, the deteriorating economic condition of such countries may adversely affect the value of the investments undertaken by the target fund in those affected countries. This in turn may cause the NAV of the target fund or prices of units to fall.
<b>Currency risk</b>	As the investments of the target fund may be denominated in currencies other than base currency, any fluctuation in the exchange rate between the base currency and the currencies in which the investments are denominated may have an impact on the value of these investments. You should be aware that if the currencies in which the investments are denominated depreciate against the base currency, this will have an adverse effect on the NAV of the target fund and vice versa. You should note that any gains or losses arising from the fluctuation in the exchange rate may further increase or decrease the returns of the investment.
<b>Fund manager's risk</b>	Since the target fund invests into collective investment scheme managed by another manager, the fund manager has absolute discretion over the fund's investment technique and knowledge, operational controls and management. In the event of mismanagement of the fund and/or the management company, the NAV of the target fund, which invests into the fund would be affected negatively. Although the probability of such occurrence is minute, should the situation arise, Principal (S) will seek for an alternative collective investment scheme that is consistent with the objective of the target fund.

**RISKS (CONTINUED)**

All investment carries some form of risks. The potential key risks include but are not limited to the following:

**Credit and default risk**

Investments of the target fund may involve a certain degree of credit and default risk. Generally, credit and default risk is the risk of loss due to the counterparty's and/or issuer's non-payment or untimely payment of the investment amount as well as the returns on investment. Principal (S) aims to mitigate this risk by performing fundamental credit research and analysis to determine the creditworthiness of its counterparty and/or issuer.
