## FUND MANAGER'S COMMENTS

Global equity market observed robust momentum strength and a broadening rally outside the IT sector or "Magnificent 7". The US Federal Reserve reaffirmed its guidance on rate cuts, signalling three cuts by 2024, and notably revised its economic outlook upwards. Additionally, Bank of Japan abandoned its negative interest rate policy after decades, citing a more optimistic stance on achieving sustainable inflation at 2%. Against this favourable backdrop, the Fund delivered +2.80% which outperformed the benchmark by 50bps. This is largely due to effective selection. Given markets at all-time high levels, it wouldn't be unexpected to observe periods where investors opt to take profits. We believe that this is a period where investors should focus more towards individual companies' earnings to identify the winners and this strategy is equipped with such strength and discipline to capitalize the opportunities to buy quality companies with sound business at reasonable valuation.

By region, North America and Europe which both contributed positively was more than offset Asia Pacific even though Asia Pacific was the best performing region. By sector, Healthcare and Industrials were the main contributors attributed to strong positive selection. As global economics show less signs of weakness and increasing demand of oil derived products expected to support the supply deficit sooner than later, the Brent oil price recovered to high \$80 from low \$80. Hence, no exposure in Energy was a huge performance detractor.

The top contributors to performance were Johnson Control and Novo Nordisk. Novo Nordisk hosted their Capital Markets Day where they updated encouraging data on their Phase 1 oral Amycretin data which showed 13% weight loss in 12 weeks. In addition, US Food and Drug Administration approved a label expansion of Wegovy (Novo Nordisk's obesity drug) for cardiovascular events. The top detractors to the performance were Adobe and Daikin. Adobe disappointed market in their Q2 earnings guidance where digital media ARR came in lower and the stock got punished especially Adobe has no clear competitive product against OpenAI's Sora yet. They expect to roll out Firefly text-to-video late this year. Closer to the end of March, Adobe held an uneventful analyst day where they reiterated all non-GAAP financial guidance and highlighted TAM growth rate of 12.6% CAGR between 2024 and 2027.

**RISKS**

All investment carries some form of risks. The potential key risks include but are not limited to the following:

<b>Returns not guaranteed</b>	The investment of the fund is subject to market fluctuations and its inherent risk. There is NO GUARANTEE on the investment returns, nor any assurance that the target fund's investment objective will be achieved.
<b>Market risk</b>	The value of an investment will decrease or increase due to changes in market factors i.e. economic, political or other events that impact large portions of the market. Market risk cannot be eliminated, hence the target fund's investment portfolio may be prone to changing market conditions that may result in uncertainties and fluctuations in the value of the underlying of the target fund's investment portfolio, causing the NAV or prices of units to fluctuate.
<b>Inflation risk</b>	This is the risk that your investment in the target fund may not grow or generate income at a rate that keeps pace with inflation. This would reduce your purchasing power even though the nominal value of the investment in monetary terms has increased.
<b>Manager's risk</b>	This risk refers to the day-to-day management of the target fund by Nomura which will impact the performance of the target fund. For example, investment decisions undertaken by Nomura as a result of incorrect view of the market or any non-compliance with internal policies, investment mandate, the deed, relevant law or guidelines due to factors such as human error or weakness in operational process and systems may adversely affect the performance of the target fund. In order to mitigate this risk, the implementation of internal controls and a structured investment process and operational procedures has been put in place by Nomura.
<b>Country risk</b>	The investment of the target fund may be affected by risk specific to the country in which it invests in. Such risks include changes in the country's economic, social and political environment. The value of the assets of the target fund may also be affected by uncertainties such as currency repatriation restrictions or other developments in the law or regulations of the country in which the target fund invest in.
<b>Reclassification of Shariah Compliance Status</b>	Shariah-compliant securities and instruments held by the target fund are subject to periodic review by the SAC of the SC, SAC of BNM, the Shariah boards of the relevant Islamic indices or the Shariah Adviser. These securities may be reclassified as non-compliant during such reviews and the target fund may need to take the necessary steps to dispose of such security or instrument, upon the advice of the Shariah Adviser. Consequently, the target fund may realise some losses in the disposal of the same or there may be opportunity loss for the target fund as the target fund may not be permitted to retain excess capital gains derived from such disposal.

**RISKS (CONTINUED)**

<b>Currency Risk</b>	<p>As the Base Currency is denominated in USD and the currency denomination of the Classes may be denominated in other than USD, the Classes not denominated in USD are also exposed to currency risk. Any fluctuation in the exchange rates between USD and the currency denomination of the Class (other than Classes denominated in USD) will affect the Unit Holder's investments in those Classes (other than Classes denominated in USD). The impact of the exchange rate movement between the Base Currency and the currency denomination of the Class (other than Classes denominated in USD) may result in a depreciation of the Unit Holder's holdings as expressed in the Base Currency.</p> <p>In order to manage currency risk, Nomura may employ currency hedging strategies to fully or partially hedge the foreign currency exposure of the target fund's investments and/or the Classes not denominated in USD. Currency hedging may reduce the effect of the exchange rate movement for the Class being hedged but it does not entirely eliminate currency risk between the Class and the Base Currency. The unhedged portion of the Class will still be affected by the exchange rate movements and it may cause fluctuation of NAV of the Class. You should note that if the exchange rate moves favourably, the Class will not benefit from any upside in currency movement due to the hedging strategy. In addition, hedging is subject to a minimum size of entering into a hedging contract and the cost of hedging will be borne by the hedged class and may affect returns of the hedged class.</p>
<b>Default Risk</b>	<p>Default risk relates to the risk that an issuer of a money market instrument either defaulting on payments or failing to make payments in a timely manner which will in turn adversely affect the value of the money market instruments. If the financial institution which the target fund places deposits with defaults in payment or become insolvent, the target fund may also suffer capital losses with regards to the capital invested and interest foregone, causing the performance of the target fund to be adversely affected. This could affect the value of the target fund as up to 20% of the NAV of the target fund will be invested in Islamic deposits, Islamic money market instruments and/or held in cash.</p>
