FUND MANAGER'S COMMENTS

- Global markets ended higher last month buoyed by policy support and an encouraging results season which helped boost sentiment. The US S&P 500 index rose 6.8% as the US Federal Reserve announced a policy shift that would maintain a higher flexibility on inflation targets and which favours lower interest rates for longer.
- The local market bucked regional trend with the benchmark KLCI falling 5.3% as profit-taking activities dragged down the index as well as a tepid earnings season.
- Banking stocks came under the spotlight with most counters reporting weaker results due to one-off modification losses and increased provisions. Most banks also deferred dividend payouts citing an uncertain outlook.
- Malaysia's economy shrank 17.1% in 2Q2020; marking its deepest contraction in over 20 years. Due to the weaker than expected numbers, Bank Negara revised its expectations for the full year 2020 growth to a range of -5.5% to -3.5% (from the previous -2.0% to 0.5% estimate). However, BNM is expecting a sharp rebound in 2021 with growth of 5.5% to 8.0%.
- Data released during the month include a 3.1% y-o-y increase in July exports, a widening of trade surplus to RM25.2billion and manufacturing PMI which moved higher at 50.0 in July
- **STRATEGY:** The fund's invested levels remained at around 95% at the end of the month. The fund remains positioned with value companies and quality large-cap Shariah-compliant stocks in the domestic market.
- Over the month, the fund increased exposure in the Technology sector. The fund also took profit in gloves and plantations holdings.
- The fund continues to adopt a barbell investment approach. We will continue to take profits on holdings which had seen strong performance and rotating into quality stocks currently trading at attractive valuations.

RISKS

All investment carries some form of risks. The potential key risks include but are not limited to the following:

<p>Market risk</p>	<p>Market risk arises because of factors that affect the entire marketplace. Factors such as economic growth, political stability and social environment are some examples of conditions that have an impact on businesses, whether positive or negative. Market risk cannot be eliminated by diversification. It stems from the fact that there are economy-wide perils which threaten all businesses. Hence, investors will be exposed to market uncertainties and no matter how many Shariah-compliant securities are held, fluctuations in the economic, political and social environment will affect the market price of the Shariah-compliant investments either in a positive or negative way.</p>
<p>Fund management risk</p>	<p>The performance of a unit trust fund depends on the experience, expertise and ability of the Fund Manager to generate returns. Lack of any of the above mentioned may adversely affect the performance of the Target Fund.</p>
<p>Performance risk</p>	<p>There is no guarantee in relation to the investment returns.</p>
<p>Inflation risk</p>	<p>Inflation rate risk is the risk of potential loss in the purchasing power of investment due to a general increase of consumer prices. Inflation erodes the nominal rate of return giving a lower real rate of return. Inflation is thus one of the major risks and results in uncertainty over the future value of investments. Take note that the funds are not constituted with the objective of matching the inflation rate of Malaysia. The Target Fund has a specific objective that it seeks to achieve without having regard to the inflation rate. This fund may not be suitable for investors whose objective is to match the inflation rate (so as not to lose purchasing power over time).</p>
<p>Liquidity risk</p>	<p>Liquidity risk arises in two scenarios. The first is where the Funds' investment cannot be sold due to unavailability of a buyer for that investment. The second scenario exists where the Funds' investment, by its nature, is thinly traded. This will have the effect of causing the Funds' investment to be sold below its fair value.</p>
<p>Credit/Default risk</p>	<p>Credit risk refers to the possibility that the issuer or financial institution of a Shariah-compliant securities or instruments or deposit placements will not be able to make timely payments of profit or principal payment on the maturity date. This may lead to a default in the payment of principal and profit and ultimately a reduction in the value of the Target Fund.</p>
<p>Profit rate risk</p>	<p>The level of profit rates has an impact on the value of investments and economic growth of a country. High profit rates dampen investments and aggregate demand leading to an economic slowdown. The value of Sukuk move in the opposite direction of profit rates, any increase in rates will lead to a reduction in the value of Sukuk, thus affecting the NAV of unit trust funds.</p> <p>The profit rate is a general economic indicator that will have an impact to the management of the Target Funds, regardless of whether it is a Shariah-compliant fund or otherwise. It does not in any way suggest that this Target Fund will invest in conventional financial instruments.</p>

RISKS (CONTINUED)

<p>Non-compliance risk</p>	<p>The establishment of these Target Funds follow rules set out in the Deed and the Guidelines. There is a risk that the Fund Manager may not observe the rules whether intentionally or through inadvertence. Whilst not every non-observance to the rules governing the Target Funds will necessarily result in some losses to the Target Funds, the investors cannot discount the risk that losses may be suffered by the Target Funds if the non-observance of the rules is serious. This may occur, for instance, if the Fund Manager decides to buy an instrument which is not permitted, whether intentionally or through inadvertence, and thereafter having to sell that instrument which may be at a loss to the Target Funds.</p>
<p>Reclassification of Shariah status risk</p>	<p>This risk refers to the risk that the currently held Shariah-compliant securities by the Target Funds may be reclassified to be Shariah non-compliant in the periodic review of the securities by the Shariah Advisory Council of Securities Commission Malaysia (SACSC) or the Shariah Adviser for the Target Fund. If this occurs, then the value of the Target Fund may be adversely affected and the Fund Manager will take the necessary steps to dispose of such securities in accordance with the advice from the Shariah Adviser.</p>
<p>Equity investment risk</p>	<p>This is the risk associated with investing in a particular equity. The value of individual equity is mainly determined by its potential growth in earnings, sound management, and treatment of minority shareholders, as well as a myriad of other factors. Failure to achieve these would result in declining investment value which in turn affects the performance of the Target Fund. This can be mitigated by diversifying the Target Fund's portfolios.</p>
