FUND MANAGER'S COMMENTS

In August, the Fund rose 2.68% underperforming the benchmark by a mere 0.89ppt as the Islamic index rebounded during the month. Performance was divergent with India and Southeast Asia being the top performers while developed markets such as Singapore, Korea and China were detractors. YTD, the fund outperformed the benchmark by 1.91ppt.

Several developments such as the Fed's signaling of the potential tapering of its bond buying program this year and Bank of Korea raising interest rates indicate that monetary policy normalization path is starting to happen globally. However, the gradual manner of monetary policy normalization and separation of tapering versus interest rate hikes should provide some leeway for Asian countries to get the pandemic under control and return their economies to normalcy.

In China, we expect more regulatory intervention in areas such as residential property in tandem with the country's Common Prosperity drive. We saw further regulations on tech companies with data privacy and curbing gaming time for minors, but the pace of new regulations seemed to have abated versus the previous month. We expect regulatory pressures for tech companies to abate further in 2022.

We remain fully invested and continue to diversify our holdings across countries and businesses to improve our portfolio's resilience. During the month, we continued to trim selected cyclicals in China and Korean tech hardware and redeployed the proceeds to Australian healthcare, selected global internet with some Asian operations and India. Off-benchmark stocks contribute ~45% to our portfolio holdings.

RISKS

All investment carries some form of risks. The potential key risks include but are not limited to the following:

Market risk	Market risk refers to the possibility that an investment will lose value because of a general decline in financial markets, due to economic, political and/or other factors, which will result in a decline in the target fund's NAV.
Inflation risk	This is the risk that your investment in the target fund may not grow or generate income at a rate that keeps pace with inflation. This would reduce your purchasing power even though the value of the investment in monetary terms has increased.
Manager's Risk	This risk refers to the day-to-day management of the target fund by Principal which will impact the performance of the target fund. For example, investment decisions undertaken by Principal, as a result of an incorrect view of the market or any non-compliance with internal policies, investment mandate, the deed, relevant law or guidelines due to factors such as human error or weaknesses in operational process and systems, may adversely affect the performance of the target fund.
Reclassification of Shariah status risk	This risk refers to the risk that the currently held Shariah-compliant securities in the target fund may be reclassified as Shariah non-compliant in the periodic review of the securities by the Shariah Advisory Council of the Securities Commission Malaysia (SACSC), Shariah adviser of the issuer, the Shariah Adviser or the Shariah boards of the relevant Islamic indices. If this occurs, Principal will take the necessary steps to dispose of such securities. There may be opportunity loss to the target fund due to the target fund not being allowed to retain the excess gains derived from the disposal of the Shariah non-compliant securities. In the event that the Shariah non-compliant securities are disposed of at a price lower than the investment cost, it may adversely affect the value of the target fund. Thus, it may cause the NAV of the target fund or price of units to fall.
Risk associated with investing in Islamic CIS	Since the target fund will invest entirely into Islamic CIS, there is a risk of concentration into Islamic CIS, in which the Islamic CIS's management company has absolute discretion over the Islamic CIS's investment technique and knowledge, operational controls and management. In the event of mismanagement of the Islamic CIS and/or the management company, the NAV of the target fund, which invests into those Islamic CIS would be affected negatively. Should the situation arise, Principal will seek for another Islamic CIS that is consistent with the objective of the target fund.
Country risk	The target fund may invest into Islamic CIS which can be domiciled in various countries. Therefore, the target fund will be subjected to risks specific to the countries in which the Islamic CIS are domiciled. Such risks include adverse changes in economic fundamentals, social and political stability, laws and regulations and foreign investments policies. These factors may have an adverse impact on the price of the Islamic CIS, which will depress the Islamic CIS's NAV growth, and consequently depress the target fund's NAV growth.

RISKS (CONTINUED)

Currency risk

As the target fund may invest into Islamic CIS denominated in currencies other than MYR, any fluctuation in the exchange rate between MYR and the currencies in which the Islamic CIS are denominated may have an impact on the value of these investments. You should be aware that if the currencies in which the Islamic CIS are denominated depreciate against MYR, this will have an adverse effect on the NAV of the target fund in MYR and vice versa. You should note that any gains or losses arising from the fluctuation in the exchange rate may further increase or decrease the returns of the investment
