FUND MANAGER'S COMMENTS

- The MSCI Asia-ex Japan index closed 5.6% higher as manufacturing activity gains traction in the region, led by China. China's PMI showed growth that beat analyst expectations, pointing to an expansionary environment.
- The KLCI closed 7.2% higher lifted by positive sentiment as Budget 2021 was passed at the policy stage. The Budget will now be debated and voted at the committee stage and final voting is slated to take place in mid-December.
- It was an eventful month for the local market in November with Budget 2021 being tabled and BNM's last MPC meeting for the year. Overall yield curve bear steepened.
- BNM left OPR unchanged at 1.75%. Statement was read as neutral, acknowledging downside risks fell short of market expectations for a more dovish pause. This resulted in some correction, especially on the short end part of the curve.
- Auction bids for government bonds have softened due to demand/supply concerns despite value emerging especially on the long tenures. The corporate bond market was dominated by primary offerings as issuers take advantage of lower rates, while the secondary markets were flooded with offers without much bids.
- **STRATEGY:** During the month, the fund's positioning leans towards a short to neutral duration bias.
- The fund maintained fixed income exposure at around 61%, while equity exposure was also maintained at around 37%.
- We expect further volatility ahead from positive developments on the vaccine front. Nonetheless, recent spike in Covid cases and still uncertain timeline for widespread vaccine rollout reinforces the view that monetary and fiscal support is still needed to aid in economic recovery.
- Overall, we remain cautious heading into the final month of 2020 as liquidity usually dries up. Meanwhile, the lingering uncertainties over how EPF is to meet the potentially large withdrawals will keep investors at bay.
- We prefer primary issuances for deploying cash. Any significant correction would present buying opportunities as we expect global and domestic interest rates to stay low to support economic recovery. However, we expect the strength to be capped given the outlook of a still large fiscal gap in 2021. Expected large supply from the corporate space will also keep interest in the secondary markets limited. We continue to be selective in our credit selection and only invest in good corporates.

RISKS

All investment carries some form of risks. The potential key risks include but are not limited to the following:

Credit/Default risk	<p>This risk concerns with issuers of Sukuks and Islamic money market instruments. The risk arises when an issuer is unable to service any coupon payments or pay the principal amount upon maturity. If such defaults were to occur, the target fund will record significant losses with respect to the NAV and will also be forced to forfeit any coupon entitlements. For Islamic money market instruments, the risk is that the issuers of such instruments may not make timely payment of interest and principal. In the event of any default in the payment of the interest and principal, the value of the target fund may be adversely affected. The management of credit risk is largely accounted for by Affin Hwang's management of issuer-specific risk. This refers to the emphasis on credit analysis conducted to determine issuer's or guarantor's ability to service promised payments.</p>
Counterparty risk	<p>This risk concerns with the target fund's investment in Shariah-compliant derivatives where the other party in an agreement may default on the terms of the agreement. Generally, counterparty risk can be reduced by emphasis on credit analysis of the counterparty to determine its creditworthiness.</p>
Interest rate risk	<p>Prices of Sukuks are subject to interest rate fluctuations. Generally, movement in interest rates affects the prices inversely. For example, when interest rates rise, prices of Sukuks will fall. The fluctuations of the prices of Sukuks will also have an impact on the NAV of the target fund. This risk can largely be eliminated by holding the Sukuks until their maturity. Affin Hwang also manages interest rate risk by considering each Sukuk's sensitivity to interest rate changes as measured by its duration. When interest rates are expected to increase, the target fund would then likely seek to switch to Sukuk which have a lower duration and are less sensitive to interest rate changes.</p>
Equity investment risk	<p>The buying and selling of equities carry a number of risks. The most important being the volatility of the capital markets on which those securities are traded and the general insolvency risk associated with the issuers of equities. The value of an equity investment also depends on its earnings potential, sound management, treatment of minority shareholders, as well as a myriad of other factors. Failure to achieve the expected earnings would result in declining investment value which in turn affects the performance of the target fund. This risk could be mitigated by diversifying the target fund's portfolio. Affin Hwang will employ stringent stock selection criteria which would effectively filter its stock components to equities which can provide income to the target fund.</p>
Liquidity risk	<p>Liquidity risk arises in two scenarios. The first is where an investment cannot be sold due to unavailability of a buyer for that investment. The second scenario exists where the investment, by its nature, is thinly traded. This will have the effect of causing the investment to be sold below its fair value.</p>
Currency risk	<p>Whilst the target fund is denominated in RM, investments in countries other than Malaysia will cause the target fund to be exposed to currency risks.</p>

RISKS (CONTINUED)

Regulatory risk

The investments of the target fund will be exposed to changes in the laws and regulations in the countries the target fund is invested in. These regulatory changes pose a risk to the target fund as it may materially impact the investments of the target fund. In an effort to manage and mitigate such risk, Affin Hwang seeks to continuously keep abreast of regulatory developments (for example, by closely monitoring announcements on regulators' website and mainstream medias) in that country. Affin Hwang may dispose its investments in that particular country should the regulatory changes adversely impact the unit holders' interest or diminish returns to the target fund.

Country risk

Since the investments for the target fund may consist of investments issued in various countries in addition to Malaysia, the foreign investment portion of the target fund may be affected by the risks specific to the countries in which it invests. Such risks include changes in a country's economic fundamentals, changes in social and political stability and foreign investment policies, which may have an adverse impact on the target fund's investments.

Reclassification of Shariah status risk

This risk refers to the risk that the currently held Shariah-compliant securities by the target fund may be reclassified to be Shariah non-compliant. If this occurs, then the value of the target fund may be adversely affected and Affin Hwang will take the necessary steps to dispose of such securities in accordance with the advice from the Shariah Adviser.
