#### FUND MANAGER'S COMMENTS

- US equities notched higher gains in October on optimism that the US Federal Reserve is considering easing monetary policy. The S&P 500 climbed 8.0% higher as souring consumer confidence and falling home prices raised expectations that the Fed could start to hit the brakes on tightening. The Nasdaq index similarly closed 3.9% higher last month.
- The local market edged 4.7% higher as election fever heats up. After much speculation, the dissolution of Parliament was announced by Prime Minister to pave the way for the 15th general election. The nomination of candidates are set to be announced on the 5 November and voting taking place on the 19 November.
- The current market base-case is that Barisan Nasional could muster a sufficient majority to form a new government. This outcome may be viewed positively as markets believe that it signifies policy continuity, where any new fiscal budget would also be similar to the one tabled before.
- The technology sector saw a sharp sell-off following a move by the US to widen its export restrictions of semiconductors to China. The potential earnings impact would depend on each company's customer base and where it is situated within the supply chain. Though, over the longer-term the sector will continue to benefit from trade diversion trends as global multinational corporations look to navigate around US-China trade tensions.
- Other notable market movements include the telco sector which gained after several major players involved reached an agreement which brings the country's 5G plans closer to fruition. This would help lift an overhang from the sector as uncertainties surrounding the country's 5G deployment are addressed.

#### STRATEGY:

- The fund's invested levels was increased to around 79% during the month, as we continue to add on to defensive names, including the telco and consumer sector. Focus is on earnings and yield stability. The fund remains positioned in quality large-cap Shariah-compliant stocks in the domestic market.
- Market direction over the short term is expected to be driven by more macro factors. Domestically, the upcoming elections will remove political and policy overhang. We don't expect much market action until the conclusion of the elections.
- We maintain our defensive positioning for now to ride out the prevailing market volatility. With the cash buffer, we would be prepared to redeploy more aggressively when outlook improves.
- We are positive on banks, which are expected to see healthy loan growth and improving asset quality. We still like technology companies from a long term perspective, where we see value emerging after the recent heavy selloff, driven by secular growth trends (e.g. 5G, EV, solar energy).

## RISKS

All investment carries some form of risks. The potential key risks include but are not limited to the following:

<b>Market risk</b>	Market risk arises because of factors that affect the entire marketplace. Factors such as economic growth, political stability and social environment are some examples of conditions that have an impact on businesses, whether positive or negative. Market risk cannot be eliminated by diversification. It stems from the fact that there are economy-wide perils which threaten all businesses. Hence, investors will be exposed to market uncertainties and no matter how many Shariah-compliant securities are held, fluctuations in the economic, political and social environment will affect the market price of the Shariah-compliant investments either in a positive or negative way.
<b>Fund management risk</b>	This risk refers to the day-to-day management of the target fund by Affin Hwang which will impact the performance of the target fund. For example, investment decisions undertaken by Affin Hwang as a result of an incorrect view of the market or any non-compliance with internal policies, investment mandate, the deed, relevant law or guidelines due to factors such as human error, fraudulence, dishonesty or weaknesses in operational process and systems, may adversely affect the performance of the target fund.
<b>Performance risk</b>	There is no guarantee in relation to the investment returns.
<b>Inflation risk</b>	This is the risk that your investment in the target fund may not grow or generate income at a rate that keeps pace with inflation. This would reduce your purchasing power even though the value of the investment in monetary terms has increased.
<b>Liquidity risk</b>	Liquidity risk arises in two scenarios. The first scenario is where the target fund's investment cannot be sold due to unavailability of a buyer for that investment. The second scenario exists where the target fund's investment, by its nature, is thinly traded. This will have the effect of causing the target fund's investment to be sold below its fair value which would adversely affect the NAV of the target fund.
<b>Credit/Default risk</b>	Credit risk relates to the creditworthiness of the issuers of the investment (Islamic money market instruments) and their expected ability to make timely payment of interest and/or principal. Any adverse situations faced by the issuers may impact the value as well as liquidity of the investment. In the case of rated investments, this may lead to a credit downgrade. Default risk relates to the risk of an issuer of the investment either defaulting on payments or failing to make payments in a timely manner which will in turn adversely affect the value of the investment. This could adversely affect the value of the target fund.
<b>Equity investment risk</b>	This is the risk associated with investing in a particular equity. The value of individual equity is mainly determined by its potential growth in earnings, sound management, and treatment of minority shareholders, as well as a myriad of other factors. Failure to achieve these would result in declining investment value which in turn affects the performance of the target fund. This can be mitigated by diversifying the target fund's portfolios.

**RISKS (CONTINUED)**

**Reclassification of Shariah status risk**

This risk refers to the risk that the currently held Shariah-compliant securities by the target fund may be reclassified to be Shariah non-compliant in the periodic review of the equities by the Shariah Advisory Council of the Securities Commission Malaysia (SACSC), the Shariah Adviser for the target fund or the Shariah boards of the relevant Islamic indices.

If this occurs, Affin Hwang will take the necessary steps to dispose of such equities. There may be opportunity loss to the target fund due to the target fund not being allowed to retain the excess capital gains derived from the disposal of the Shariah non-compliant equities. Affin Hwang will be required to dispose of these equities immediately if the prices are above the purchase price. Should the prices be below the purchase price, Affin Hwang may choose to hold on to these holdings until the prices meet the purchase price. Nevertheless, should Affin Hwang decide to dispose of these equities below the purchase price, the target fund will be faced with the risk of realising its losses, thus negatively impacting the NAV of the target fund.

**Shariah-compliant warrants investment risk**

The value of the Shariah-compliant warrants (“warrants”) will depend on the pricing of the underlying security whereby the growth and performance prospect of the underlying security would consequentially affect the value of the warrants. In addition, the value of the warrants may decrease exponentially as the warrants approach its maturity date and the potential gains from a favourable price movement of the underlying security may be offset by aggressive time decay. Affin Hwang may consider unwinding these warrants if there are material adverse changes to its value with the aim to mitigate the risk.
