FUND MANAGER'S COMMENTS

The Fund fell 0.98% during the month, underperforming the benchmark by 1.12%.

MSCI AC Asia ex Japan Islamic Index rose 0.9% in US\$ terms in September led by China/ HK SAR post stimulus announcement, Singapore and Thailand while Malaysia and Indonesia were laggards. The US 10-year bond yield declined 12bps to 3.78% while the Dollar Index fell 0.9% during the month. Year-to-date, the MSCI AC Asia ex Japan Islamic Index rose 14.9% in US\$ terms.

In a surprise move, Chinese policymakers announced a series of monetary easing measures and the establishment of a swap facility to support the equity market. The liquidity injection facility of RMB 800bn for the domestic Chinese equity market is noteworthy. Meanwhile, the US monetary policy has now shifted towards a rate cut environment with the US Fed cutting rates by 50bps in September. This should allow central banks in Asia the leeway to reduce rates without worrying about their currencies in the foreseeable future. The US Fed's dot plot is projecting another 150 bps rate cut to 3.1-3.6% by end 2025.

We have a constructive view on Asian equities, with the start of the US rate cutting cycle and positive earnings revision. We are selective in China, especially in domestic oriented companies which have shown signs of turnaround, improving topline and margins, and able to deploy capital efficiently, manage costs and/or can declare high dividend yields.

RISKS

All investment carries some form of risks. The potential key risks include but are not limited to the following:

Market risk	Market risk refers to the possibility that an investment will lose value because of a general decline in financial markets, due to economic, political and/or other factors, which will result in a decline in the target fund's NAV.
Inflation risk	This is the risk that your investment in the target fund may not grow or generate income at a rate that keeps pace with inflation. This would reduce your purchasing power even though the value of the investment in monetary terms has increased.
Manager's risk	This risk refers to the day-to-day management of the target fund by the manager which will impact the performance of the fund. For example, investment decisions undertaken by Principal, as a result of an incorrect view of the market or any non-compliance with internal policies, investment mandate, the deed, relevant law or guidelines due to factors such as human error or weaknesses in operational process and systems, may adversely affect the performance of the target fund.

RISKS

Reclassification of Shariah status risk

This risk refers to the risk that the currently held Shariah-compliant securities in the target fund may be reclassified as Shariah non-compliant in the periodic review of the securities by the Shariah Advisory Council of the Securities Commission Malaysia (SACSC), Shariah adviser of the issuer, the Shariah Adviser or the Shariah boards of the relevant Islamic indices. If this occurs, Principal will take the necessary steps to dispose of such securities. There may be opportunity loss to the target fund due to the target fund not being allowed to retain the excess gains derived from the disposal of the Shariah non-compliant securities. In the event that the Shariah non-compliant securities are disposed of at a price lower than the investment cost, it may adversely affect the value of the target fund. Thus, it may cause the NAV of the target fund or price of units to fall.

Risk associated with investing in Islamic CIS

Since the target fund will invest entirely into Islamic CIS, there is a risk of concentration into Islamic CIS, in which the Islamic CIS's management company has absolute discretion over the Islamic CIS's investment technique and knowledge, operational controls and management. In the event of mismanagement of the Islamic CIS and/or the management company, the NAV of the target fund, which invests into those Islamic CIS would be affected negatively. Should the situation arise, Principal will seek for another Islamic CIS that is consistent with the objective of the target fund.

Country risk

The target fund may invest into Islamic CIS which can be domiciled in various countries. Therefore, the target fund will be subjected to risks specific to the countries in which the Islamic CIS are domiciled. Such risks include adverse changes in economic fundamentals, social and political stability, laws and regulations and foreign investments policies. These factors may have an adverse impact on the price of the Islamic CIS, which will depress the Islamic CIS's NAV growth, and consequently depress the target fund's NAV growth.

Currency risk

As the target fund may invest into Islamic CIS denominated in currencies other than MYR, any fluctuation in the exchange rate between MYR and the currencies in which the Islamic CIS are denominated may have an impact on the value of these investments. You should note that any gains or losses arising from the fluctuation in the exchange rate may further increase or decrease the returns of the target fund.
