FUND MANAGER'S COMMENTS

The Fund (Class MYR) increased by 3.20% during the month of July 2020, underperforming the benchmark by 66 basis points (bps). Year-to-date, the Fund increased by 2.51%, outperforming the benchmark by 283 bps.

Developed markets gained further supported by the positive economic and earnings data expect Japan. The number of new COVID infections surged to record highs in US but slowed down towards end of July with rising infections in Europe and Japan from very low levels. Positive Phase II vaccine clinical trial results boosted hopes globally. The Dollar Index weakened by 4.15% due to dampening US growth outlook, concerns over COVID situations with continued expansionary monetary & fiscal stimulus.

US PMI rebounded slightly back to expansion zone. However, labor market recovery is slowing with initial jobless claims hovering at high levels in July. Europe PMI rebounded significantly to 52.2, leading developed markets' economic recovery. Japan PMI improved to 45, still in the contraction zone. US and Europe forward 12 months corporate earnings have been revised higher by 4% and 6%, even though Japanese earnings have been slightly lower than last month. However, corporate earnings levels are still much below their pre-COVID levels. Europe and Japan have managed the COVID pandemic relatively better despite the recent rising infections in the regions. Central banks will continue the expansionary monetary policies. Congress is negotiating a second round of stimulus cheques and potential extension to unemployment benefits. The European Union has also agreed on the recovery fund of 750b Euro to support the economy recovery. There are growing geopolitical risks as US presidential election is upcoming and US-China trade relations could deteriorate. However, we expected trade issues to recede as a headline risk as we enter 4Q20 and 2021.

Our current position is to Slight OW OW global central banks remain accommodative and interest rates stay at very low levels. Within equity, we are Neutral on US because of concerns on the COVID situation, its impact on economic recovery and expensive valuations. We are Slightly OW Europe because of corporate earnings recovery and favorable valuations. We are Neutral on Japan as sentiment is improving with the recovery in global economic conditions. Japan's forward earnings downgrades are stabilizing and PMI started to recover from depressed levels.

RISKS

All investment carries some form of risks. The potential key risks include but are not limited to the following:

Market risk	<p>Market risk is the risk of negative movement that affects the price of all assets in a particular capital market. The factors influencing the performance of the markets include:</p> <ul style="list-style-type: none"> • Economic and financial market conditions • Political change • Broad investor sentiment • Movements in interest rate and inflation • Currency risks <p>Stock values fluctuate in response to the activities and performance of individual companies and general market or economic conditions. Such movements in the underlying values of the share of the investment portfolio will cause the NAV or prices of units to fall as well as rise. Market risk is mitigated through careful selection of securities and diversification through spreading of risk across a basket of assets and/or sectors.</p>
Security risk	<p>Security risk applies to individual companies or securities. Examples include the possible effect on a company of losing a key executive or the unforeseen entry of a new competitor into the market. The risk is mitigated by the fund manager's periodic research and analysis on all the underlying securities held by the fund.</p>
Foreign Currency risk	<p>This risk is associated with investments that are quoted and/or priced in foreign currency denomination. Malaysian based investors should be aware that if the RM appreciates against the currencies in which the portfolio of the investment is denominated, this will have an adverse effect on the NAV of the Fund and vice versa. Investors should note that any gains or losses arising from the movement of the foreign currencies against its home currency may therefore increase/decrease the capital gains of the investment. Nevertheless, investors should realise that currency risk is considered as one of the major risks to investments in foreign assets due to the volatile nature of the foreign exchange market. The risk is mitigated through a combination of fund's exposure into the U.S, European, Japanese and Malaysia equities.</p>
Credit risk	<p>The risk of loss of principal or loss of a financial reward stemming from counterparty's failure to repay a loan or otherwise meet a contractual obligation. This risk is primarily applicable to the liquid assets of this fund. Credit risk is mitigated by fund manager's periodic reviews and analysis.</p>
Country risk	<p>A fund investing in foreign countries may be affected by risks specific to the countries in which it invests. Such risks include changes in the country's economic fundamentals, social and political stability, currency movements and foreign investment policies. These factors may have an impact on the prices of the Fund's investment in that country and consequently may also affect the fund's NAV and its growth. To mitigate this risk, the fund manager will diversify securities investment that spread across various countries.</p>
