FUND MANAGER'S COMMENTS

In December 2024, the Fund's performance increased by 2.34%, outperforming the benchmark by 0.37%.

The KLCI ended the last month of year on a strong note, up 3% and outperforming MSCI ASEAN's -1.1%, aided by year-end window dressing and cash redeployment by domestic funds amidst another month of heavy foreign selling due to policy uncertainties under the new US administration and the trajectory of Fed rates coupled with rising bond yields.

Malaysia's manufacturing sector moderated further in December, with a PMI reading of 48.6pts vs 49.2 pts the previous month, as demand conditions remain muted. S&P Global noted a slowdown in new orders, output, purchasing and stocks, while employment also fell marginally. Positively, inflationary pressures softened sharply. Optimism of a recovery in new orders over the coming 12 months remains solid, unchanged from November. The latest PMI data suggests 4Q24 GDP growth momentum could sustain at a similar pace as the preceding quarter, which was at 5.9%, albeit at a slower rate of increase. To recap, BNM now projects GDP to grow 4.8-5.3% in 2024, revised up from 4-5% previously, and the economy to expand by 4.5-5.5% in 2025.

During the month of December, the Malaysian Government Securities ("MGS") yield curve flattened with selective longer maturities remained largely stable or edged marginally lower. In contrast, the short end of the curve shifted higher with the 5-year benchmark yield shifted the most by 4bps, followed by the 15-year which shifted 3bps higher. The 3-, 5-, 7-, 10-, 15-, 20- and 30-year benchmarks closed at 3.53% (2bps), 3.65% (4bps), 3.78% (1bp), 3.84% (2bps), 3.98% (3bps), 4.08% (1bp) and 4.19% (-1bp), respectively in December.

The S&P Global Malaysia Manufacturing PMI fell to 48.6 in December 2024 from 49.2 in November, marking the lowest reading since March and the seventh consecutive month of contraction in the manufacturing sector.

## RISKS

All investment carries some form of risks. The potential key risks include but are not limited to the following:

<b>Market risk</b>	<p>Market risk is the risk of negative movement that affects the price of all assets in a particular capital market. The factors influencing the performance of the markets include:</p> <ul style="list-style-type: none"><li>• Economic and financial market conditions</li><li>• Political change</li><li>• Broad investor sentiment</li><li>• Movements in interest rate and inflation</li><li>• Currency risks</li></ul> <p>Stock and/or securities values fluctuate in response to the activities and performance of individual companies and general market or economic conditions. Such movements in the underlying values of the share of the investment portfolio will cause the NAV or prices of units to fall as well as rise. Market risk is mitigated through careful selection of securities and diversification through spreading of risk across a basket of assets and/or sectors.</p>
<b>Interest rate risk</b>	<p>Interest rates are inclined to fluctuate over time. A rise in the general level of interest rates will result in a decline of the value of all bonds and fixed interest securities. Hence a bond fund's NAV will most probably decrease with the rise of interest rates. Maintaining an appropriate diverse mix of assets with different yield and maturity profiles will lessen the impact of interest rate risk.</p>
<b>Liquidity risk</b>	<p>Liquidity risk is defined as the ease with which a security can be sold at or near its fair value depending on the volumes traded on the market. Liquidity risk is mitigated through the selection of stocks with an active trading volume in the open market. This ensures that exit strategies can be executed with little/minimal impacts to price fluctuations.</p>
<b>Company or security specific risk</b>	<p>There are many specific risks, which apply to individual companies or securities. Examples include the possible effect on a company of losing a key executive or the unforeseen entry of a new competitor into the market. The risk is mitigated by conducting in-house periodic reviews and analysis. In-house analysis is then supplemented by periodic reviews from rating agencies and market analysts.</p>
<b>Credit risk</b>	<p>Credit risk refers to an issuer's ability to make timely payments of profit and principal. In the event that the issuer of the instrument is faced with financial difficulties, leading to a decrease in their credit worthiness (i.e Bond prices will change/drop in the event of rating downgrade) and default in the payment of profit and principal, the value of the fund may be adversely affected. Credit risk is mitigated by conducting in-house periodic reviews and analysis. In-house analysis is then supplemented by periodic reviews from rating agencies and market analysts.</p>
