## FUND MANAGER'S COMMENTS

- Global equities treaded higher in May amidst a slew of economic data releases boosted optimism, though this was tempered by a resurgence of COVID-19 cases especially in emerging markets. The US S&P 500 closed 0.7% higher, whilst the MSCI AC World index was up 1.6% over the month. The MSCI Asia ex-Japan index ended May 1.2% higher, with India posting the strongest gains despite currently struggling with a surge in pandemic cases.
- The local market was weaker with the benchmark KLCI down 0.5% in May as new daily COVID-19 infections soared. A full lockdown was implemented to contain the pandemic.
- The government announced an additional MYR40 billion worth of fiscal support to cushion the effects on the economy. The Finance Minister highlighted that the lockdown might impact growth and fiscal deficit targets which might be revised soon.
- Malaysia reported strong trade numbers in April. Exports grew by the fastest pace since 1998, up 63.0% y/y, supported by the continued recovery in external demand amid a low-base effect. Trade surplus narrowed to MYR20.5bil.
- Recent reporting season had been on par with expectations. Some of our holdings including Inari and Kuala Lumpur Kepong ("KLK") Berhad posted strong earnings.

### STRATEGY:

- The fund's invested levels was reduced to 82% during the month. The fund remains positioned in quality large-cap Shariah-compliant stocks in the domestic market.
- Accommodative policies, strong liquidity conditions and the vaccine rollout are expected to provide support for stock markets. Hence, we look to be highly invested and will look for opportunities to redeploy into the market.
- The Fund's largest sector exposure is in exporters (tech and EMS sector) due to a strong growth outlook, and a beneficiary of trade diversion. Other major exposure includes telco names, which benefits from 5G rollout and MyDigital initiative.
- We take a longer term view by increasingly allocating to recovery-plays including banks, commodities, consumer and property, despite recent resurgence in Covid-19 cases.
- Politics remains a key risk. Despite political still an overhang and may last until end of emergency period. Meanwhile, markets are likely to focus on economic recovery and vaccine rollout.
- Over the month, cash levels increased as we took profit on selected holdings within the technology, industrials, healthcare, and energy sector following strong performance. We look to redeploy this into recovery beneficiaries.
- The fund continues to adopt a barbell strategy, investing in re-opening beneficiaries together with companies with long term structural growth opportunities.

**RISKS**

All investment carries some form of risks. The potential key risks include but are not limited to the following:

<b>Market risk</b>	Market risk arises because of factors that affect the entire marketplace. Factors such as economic growth, political stability and social environment are some examples of conditions that have an impact on businesses, whether positive or negative. Market risk cannot be eliminated by diversification. It stems from the fact that there are economy-wide perils which threaten all businesses. Hence, investors will be exposed to market uncertainties and no matter how many Shariah-compliant securities are held, fluctuations in the economic, political and social environment will affect the market price of the Shariah-compliant investments either in a positive or negative way.
<b>Fund management risk</b>	This risk refers to the day-to-day management of the target fund by Affin Hwang which will impact the performance of the target fund. For example, investment decisions undertaken by Affin Hwang as a result of an incorrect view of the market or any non-compliance with internal policies, investment mandate, the deed, relevant law or guidelines due to factors such as human error, fraudulence, dishonesty or weaknesses in operational process and systems, may adversely affect the performance of the target fund.
<b>Performance risk</b>	There is no guarantee in relation to the investment returns.
<b>Inflation risk</b>	This is the risk that your investment in the target fund may not grow or generate income at a rate that keeps pace with inflation. This would reduce your purchasing power even though the value of the investment in monetary terms has increased.
<b>Liquidity risk</b>	Liquidity risk arises in two scenarios. The first scenario is where the target fund's investment cannot be sold due to unavailability of a buyer for that investment. The second scenario exists where the target fund's investment, by its nature, is thinly traded. This will have the effect of causing the target fund's investment to be sold below its fair value which would adversely affect the NAV of the target fund.
<b>Credit/Default risk</b>	Credit risk relates to the creditworthiness of the issuers of the investment (Islamic money market instruments) and their expected ability to make timely payment of interest and/or principal. Any adverse situations faced by the issuers may impact the value as well as liquidity of the investment. In the case of rated investments, this may lead to a credit downgrade. Default risk relates to the risk of an issuer of the investment either defaulting on payments or failing to make payments in a timely manner which will in turn adversely affect the value of the investment. This could adversely affect the value of the target fund.
<b>Equity investment risk</b>	This is the risk associated with investing in a particular equity. The value of individual equity is mainly determined by its potential growth in earnings, sound management, and treatment of minority shareholders, as well as a myriad of other factors. Failure to achieve these would result in declining investment value which in turn affects the performance of the target fund. This can be mitigated by diversifying the target fund's portfolios.

**RISKS (CONTINUED)**

**Reclassification of Shariah status risk**

This risk refers to the risk that the currently held Shariah-compliant securities by the target fund may be reclassified to be Shariah non-compliant in the periodic review of the equities by the Shariah Advisory Council of the Securities Commission Malaysia (SACSC), the Shariah Adviser for the target fund or the Shariah boards of the relevant Islamic indices.

If this occurs, Affin Hwang will take the necessary steps to dispose of such equities. There may be opportunity loss to the target fund due to the target fund not being allowed to retain the excess capital gains derived from the disposal of the Shariah non-compliant equities. Affin Hwang will be required to dispose of these equities immediately if the prices are above the purchase price. Should the prices be below the purchase price, Affin Hwang may choose to hold on to these holdings until the prices meet the purchase price. Nevertheless, should Affin Hwang decide to dispose of these equities below the purchase price, the target fund will be faced with the risk of realising its losses, thus negatively impacting the NAV of the target fund.

**Shariah-compliant warrants investment risk**

The value of the Shariah-compliant warrants (“warrants”) will depend on the pricing of the underlying security whereby the growth and performance prospect of the underlying security would consequentially affect the value of the warrants. In addition, the value of the warrants may decrease exponentially as the warrants approach its maturity date and the potential gains from a favourable price movement of the underlying security may be offset by aggressive time decay. Affin Hwang may consider unwinding these warrants if there are material adverse changes to its value with the aim to mitigate the risk.
