PERFORMANCE RECORD

The Fund feeds into AHAM Select Asia (ex Japan) Quantum Fund (“target fund”) with the objective of achieving capital appreciation over the medium to long-term by investing in Asia (ex Japan) equities with market capitalization of not more than USD1.5 billion at the time of investment. However, the target fund would also have an option to invest into companies with a market capitalization of not more than USD3.0 billion at the time of investment, which will be capped at no more than 30% of the Net Asset Value (NAV) of the target fund.

Table below shows the investment returns of Sun Life Malaysia Select Asia (ex Japan) Quantum Fund versus its benchmark as at 31 May 2023:

%	YTD	1M	6M	1-Year	3-Years	5-Years	Since Inception
Fund*	-1.10	-0.47	1.02	1.63	31.21	35.50	67.40
Benchmark	9.30	3.53	7.61	-1.39	46.65	14.84	59.15

FUND MANAGER'S COMMENTS

- US equities marched higher in May as investors heaved a sigh of relief after lawmakers passed a bill to raise the debt ceiling and avert a potentially catastrophic default. The S&P 500 index edged 0.25% as the US House of Representatives passed the bill with support from both Democrats and Republicans putting an end to the deadlock after weeks of tense negotiations.
- In Asia, the broader MSCI Asia ex-Japan index fell 2.09% with China bearing the brunt of losses. The MSCI China index slid 8.95% in the month after disappointing economic data. Retail sales rose by 18.4% which was lower than economists' forecast. Similarly, industrial production rose by 5.6% y-o-y which was below expectations.
- This weakness in consumer sentiment was also apparent in the latest labour data showing youth unemployment surging to 20.4% amidst concerns that tailwinds from its post-COVID reopening are beginning to wane.
- On the flipside, Korea and Taiwan staged a strong rally buoyed by increased confidence that the tech sector is bottoming out with major players seen cutting back on supply. The KOSPI index climbed 3.02%, while Taiwan's Stock Exchange jumped 6.42%.
- Blockbuster earnings from tech bellwether Nvidia also lifted sentiment and buoyed the rest of the sector. The chipmaker thumped quarterly earnings estimates and provided strong forecasts in its outlook, as the company expects demand to be supported by advancements in artificial intelligence (AI).
- Meanwhile, major chipmaker Samsung Electronics said that it would make a "meaningful" cut to chip production after reporting a plunge in its quarterly results amidst a downturn in the industry. In prior downcycles, the company had only announced a reduction in capex as opposed to a full-blown production cut. This augurs well for the semiconductor space which could find a quicker recovery as supply normalizes.

STRATEGY:

- Heightened risks in the near term from weaker economic data and earnings deterioration amidst a global slowdown and tight financial conditions.
- The main drivers of the fund are structural growth sectors (eg. Healthcare and technology), China reopening beneficiaries, and ASEAN/India markets from rising disposable income.
- The fund is currently positioned to leverage on earnings recovery in China. China recovery momentum has slowed but sentiment from MNC corporates continue to improve sequentially.
- As earnings of semiconductor manufacturers are believed to be at its trough, the fund is also positioned to benefit from when the industry recovers.
- We maintain a constant cash buffer around 10% to allow the portfolio to be more resilient on the back of market volatility.

RISKS

All investment carries some form of risks. The potential key risks include but are not limited to the following:

Market risk	Market risk refers to the possibility that an investment will lose value because of a general decline in financial markets, due to economic, political and/or other factors, which will result in a decline in the target fund's NAV.
Stock specific risk	Prices of a particular stock may fluctuate in response to the circumstances affecting individual companies such as adverse financial performance, news of a possible merger or loss of key personnel of a company. Any adverse price movements of such stock will adversely affect the target fund's NAV.
Credit and default risk	Credit risk relates to the creditworthiness of the issuers of the debentures or money market instruments (hereinafter referred to as "investment") and their expected ability to make timely payment of interest and/or principal. Any adverse situations faced by the issuers may impact the value as well as liquidity of the investment. In the case of rated investment, this may lead to a credit downgrade. Default risk relates to the risk of an issuer of the investment either defaulting on payments or failing to make payments in a timely manner which will in turn adversely affect the value of the investment. This could adversely affect the value of the target fund.
Interest rate risk	This risk refers to the impact of interest rate changes on the valuation of debentures or money market instruments (hereinafter referred to as "investment"). When interest rates rise, the investment prices generally decline and this may lower the market value of the investment. The reverse may apply when interest rates fall.
Warrants investment risk	The value of the warrants will depend on the pricing of the underlying security, whereby the growth and performance prospect of the underlying security would consequentially affect the value of the warrants. In addition, the value of the warrants may decrease exponentially as the warrants approach its maturity date and the potential gains from a favourable price movement of the underlying security may be offset by aggressive time decay. We may consider unwinding these warrants if there are material adverse changes to its value with the aim to mitigate the risk.
Country risk	Investments of the target fund in any country may be affected by changes in the economic and political climate, restriction on currency repatriation or other developments in the law or regulations of the countries in which the target fund invests. For example, the deteriorating economic condition of such countries may adversely affect the value of the investments undertaken by the target fund in those affected countries. This in turn may cause the NAV of the target fund or prices of units to fall.

RISKS (CONTINUED)

All investment carries some form of risks. The potential key risks include but are not limited to the following:

Currency risk

As the investments of the target fund may be denominated in currencies other than the base currency, any fluctuation in the exchange rate between the base currency and the currencies in which the investments are denominated may have an impact on the value of these investments. You should note that any gains or losses arising from the fluctuation in the exchange rate may further increase or decrease the returns of the investment.

Currency risk at the target fund level

The impact of the exchange rate movement between the base currency of the target fund and the currency of the underlying investments (other than in MYR) may result in a depreciation of the value of the investments as expressed in the base currency of the target fund.

Regulatory risk

The investments of the target fund would be exposed to changes in the laws and regulations in the countries the target fund is invested in. These regulatory changes pose a risk to the target fund as it may materially impact the investments of the target fund. In an effort to manage and mitigate such risk, the fund manager seeks to continuously keep abreast of regulatory developments (for example, by closely monitoring announcements on regulators' website and mainstream media) in that country. The fund manager may dispose its investments in that particular country should the regulatory changes adversely impact the policy owners' interest or diminish returns of the target fund.
