FUND MANAGER'S COMMENTS

- Global equities rose in November buoyed by positive vaccine developments and reduced overhang on US politics. The S&P 500 index climbed 4.9% while the MSCI AC World Index jumped by 12.3%.
- The MSCI Asia-ex Japan index closed 5.6% higher as manufacturing activity gains traction in the region, led by China. China's PMI showed growth that beat analyst expectations, pointing to an expansionary environment.
- Earnings momentum is expected to continue into 2021 with earnings growth projected to rise by 38.0% in Asia ex-Japan (ex-Financials), according to market estimates. Key sectors leading the recovery include energy, consumer discretionary and industrials. However, this is tempered by moderately higher valuations that has crept up above historical averages.
- Asia Pacific nations including China, Japan, South Korea and ASEAN, signed the Regional Comprehensive Economic Partnership (RCEP). The world's largest regional free-trade agreement, encompassing nearly a third of the world's population and gross domestic product.
- The KLCI closed 7.2% higher lifted by positive sentiment as Budget 2021 was passed at the policy stage. The Budget will now be debated and voted at the committee stage and final voting is slated to take place in mid-December.
- **STRATEGY:** We remain constructive on equities on the expectations that global growth would continue on its recovery path heading into 2021, continued accommodative policies, positive earnings revision and encouraging vaccine developments.
- However, we remain cognizant of the risk of policy tapering as the economy recovers, overly bullish market sentiments and potentially more Covid-19 resurgence that tempers expectations of a return to normalcy.
- We continue to be positioned in secular growth stocks, but are marginally shifting to value names. We look to have a balanced exposure to companies that can grow structurally post vaccine and to reopening plays and cyclicals.

RISKS

All investment carries some form of risks. The potential key risks include but are not limited to the following:

Market risk	<p>Market risk is the risk of negative movement that affects the price of all assets in a particular capital market. The factors influencing the performance of the markets include:</p> <ul style="list-style-type: none"> • Economic and financial market conditions • Political change • Broad investor sentiment • Movements in interest rate and inflation • Currency risks <p>Stock values fluctuate in response to the activities and performance of individual companies and general market or economic conditions. Such movements in the underlying values of the share of the investment portfolio will cause the NAV or prices of units to fall as well as rise. Market risk is mitigated through careful selection of securities and diversification through spreading of risk across a basket of assets and/or sectors.</p>
Security risk	<p>Security risk applies to individual companies or securities. Examples include the possible effect on a company of losing a key executive or the unforeseen entry of a new competitor into the market. The risk is mitigated by the fund manager's periodic research and analysis on all the underlying securities held by the fund.</p>
Foreign currency risk	<p>This risk is associated with investments that are quoted and/or priced in foreign currency denomination. Malaysian based investors should be aware that if the RM appreciates against the currencies in which the portfolio of the investment is denominated, this will have an adverse effect on the NAV of the Fund and vice versa. Investors should note that any gains or losses arising from the movement of the foreign currencies against its home currency may therefore increase/decrease the capital gains of the investment. Nevertheless, investors should realize that currency risk is considered as one of the major risks to investments in foreign assets due to the volatile nature of the foreign exchange market. The risk is mitigated through a combination of exposure in Asia ex Japan equities.</p>
Credit risk	<p>The risk of loss of principal or loss of a financial reward stemming from counterparty's failure to repay a loan or otherwise meet a contractual obligation. This risk is primarily applicable to the liquid assets of this fund. Credit risk is mitigated by fund manager's periodic reviews and analysis.</p>
Country risk	<p>A fund investing in foreign countries may be affected by risks specific to the countries in which it invests. Such risks include changes in the country's economic fundamentals, social and political stability, currency movements and foreign investment policies. These factors may have an impact on the prices of the Fund's investment in that country and consequently may also affect the fund's NAV and its growth. To mitigate this risk, the fund manager will diversify securities investment that spread across various countries.</p>
