#### FUND MANAGER'S COMMENTS

- Global markets edged up in July as US-China geopolitical tensions simmer, whilst investors also assess the reporting season. The S&P 500 index closed 4.4% higher as the US Federal Reserve left interest rates unchanged at near zero and remained accommodative. In Asia, the MSCI Asia ex-Japan index rose 6.9% in July.
- China's manufacturing PMI data for July rose to 52.8, from 51.2 in June, while Q2 GDP grew 3.2% y-o-y, beating expectations. However, geopolitical headwinds have increased for China including a potential ban of some of its technology by the US.
- A recent increase in Covid-19 cases in parts of Asia has raised concerns over the possibility of lockdowns being reintroduced that could hinder prospects of a smooth economic recovery.
- The local market tracked regional gains with the KLCI closing 6.9% higher. While local markets continue to recover from its March lows, the rally had been concentrated in a handful of names including tech and glove makers, while most of the local benchmark constituents remains in the red year to date.
- **STRATEGY:** The fund remains highly invested as liquidity in the market remains supportive while we expect the gradual economic recovery to be sustained. A weaker USD also bodes well for markets in the region.
- The fund is still overweight equities in the Hong Kong/China region as economic indicators are improving. Markets are now experiencing an optimistic V-shaped recovery as sentiments begin to improve.
- Key transactions in the month included further adding positions into the healthcare and technology space given its potential for significant growth and resilience while taking profit on names which have done well.

**RISKS**

All investment carries some form of risks. The potential key risks include but are not limited to the following:

<b>Market risk</b>	<p>Market risk is the risk of negative movement that affects the price of all assets in a particular capital market. The factors influencing the performance of the markets include:</p> <ul style="list-style-type: none"> <li>• Economic and financial market conditions</li> <li>• Political change</li> <li>• Broad investor sentiment</li> <li>• Movements in interest rate and inflation</li> <li>• Currency risks</li> </ul> <p>Stock values fluctuate in response to the activities and performance of individual companies and general market or economic conditions. Such movements in the underlying values of the share of the investment portfolio will cause the NAV or prices of units to fall as well as rise. Market risk is mitigated through careful selection of securities and diversification through spreading of risk across a basket of assets and/or sectors.</p>
<b>Security risk</b>	<p>Security risk applies to individual companies or securities. Examples include the possible effect on a company of losing a key executive or the unforeseen entry of a new competitor into the market. The risk is mitigated by the fund manager's periodic research and analysis on all the underlying securities held by the fund.</p>
<b>Foreign currency risk</b>	<p>This risk is associated with investments that are quoted and/or priced in foreign currency denomination. Malaysian based investors should be aware that if the RM appreciates against the currencies in which the portfolio of the investment is denominated, this will have an adverse effect on the NAV of the Fund and vice versa. Investors should note that any gains or losses arising from the movement of the foreign currencies against its home currency may therefore increase/decrease the capital gains of the investment. Nevertheless, investors should realize that currency risk is considered as one of the major risks to investments in foreign assets due to the volatile nature of the foreign exchange market. The risk is mitigated through a combination of exposure in Asia ex Japan equities.</p>
<b>Credit risk</b>	<p>The risk of loss of principal or loss of a financial reward stemming from counterparty's failure to repay a loan or otherwise meet a contractual obligation. This risk is primarily applicable to the liquid assets of this fund. Credit risk is mitigated by fund manager's periodic reviews and analysis.</p>
<b>Country risk</b>	<p>A fund investing in foreign countries may be affected by risks specific to the countries in which it invests. Such risks include changes in the country's economic fundamentals, social and political stability, currency movements and foreign investment policies. These factors may have an impact on the prices of the Fund's investment in that country and consequently may also affect the fund's NAV and its growth. To mitigate this risk, the fund manager will diversify securities investment that spread across various countries.</p>
