#### FUND MANAGER'S COMMENTS

Developed markets experienced another round of sell-off due to the Russian-Ukraine conflict. S&P 500, MSCI Europe and MSCI Japan declined by 3.00%, 3.00% and 1.20% respectively in local currency terms. The US Dollar appreciated by 2.50% since end of January. Euro depreciated by 3.40% and Japanese Yen was flat. US 10-year bond yield has fell to 1.70% at the time of writing. The Bloomberg Commodity Index rose by 22% with Brent oil and natural gas prices rising.

The rising energy prices may have a significant impact on inflation and consumer demand. Although developed markets economic fundamentals still look sound, there is downside risk to economic growth and corporate earnings if the geopolitical conflict persists. We have cut Europe back to Neutral and maintain a neutral position for all countries as we expect short-term volatilities to persist in the equity market.

## RISKS

All investment carries some form of risks. The potential key risks include but are not limited to the following:

<b>Market risk</b>	Market risk refers to the possibility that an investment will lose value because of a general decline in financial markets, due to economic, political and/or other factors, which will result in a decline in the target fund's NAV.
<b>Stock specific risk</b>	Prices of a particular stock may fluctuate in response to the circumstances affecting individual companies such as adverse financial performance, news of a possible merger or loss of key personnel of a company. Any adverse price movements of such stock will adversely affect the target fund's NAV.
<b>Country risk</b>	Investments of the target fund in any country may be affected by changes in the economic and political climate, restriction on currency repatriation or other developments in the law or regulations of the countries in which the target fund invests. For example, the deteriorating economic condition of such countries may adversely affect the value of the investments undertaken by the target fund in those affected countries. This in turn may cause the NAV of the target fund or prices of units to fall.
<b>Currency risk</b>	As the investments of the target fund may be denominated in currencies other than base currency, any fluctuation in the exchange rate between the base currency and the currencies in which the investments are denominated may have an impact on the value of these investments. You should be aware that if the currencies in which the investments are denominated depreciate against the base currency, this will have an adverse effect on the NAV of the target fund and vice versa. You should note that any gains or losses arising from the fluctuation in the exchange rate may further increase or decrease the returns of the investment.
<b>Fund manager's risk</b>	Since the target fund invests into collective investment scheme managed by another manager, the fund manager has absolute discretion over the fund's investment technique and knowledge, operational controls and management. In the event of mismanagement of the fund and/or the management company, the NAV of the target fund, which invests into the fund would be affected negatively. Although the probability of such occurrence is minute, should the situation arise, Principal (S) will seek for an alternative collective investment scheme that is consistent with the objective of the target fund.

## RISKS (CONTINUED)

All investment carries some form of risks. The potential key risks include but are not limited to the following:

### **Credit and default risk**

Investments of the target fund may involve a certain degree of credit and default risk. Generally, credit and default risk is the risk of loss due to the counterparty's and/or issuer's non-payment or untimely payment of the investment amount as well as the returns on investment. Principal (S) aims to mitigate this risk by performing fundamental credit research and analysis to determine the creditworthiness of its counterparty and/or issuer.
