PERFORMANCE RECORD

The Fund feeds into Affin Hwang Select Asia (ex Japan) Quantum Fund (“target fund”) with the objective of achieving capital appreciation over the medium to long-term by investing in Asia (ex Japan) equities with market capitalization of not more than USD1.5 billion at the time of investment. However, the target fund would also have an option to invest into companies with a market capitalization of not more than USD3.0 billion at the time of investment, which will be capped at no more than 30% of the Net Asset Value (NAV) of the target fund.

Table below shows the investment returns of Sun Life Malaysia Select Asia (ex Japan) Quantum Fund versus its benchmark as at 26 February 2021:

%	YTD	1M	6M	1-Year	3-Years	5-Years	Since Inception
Fund*	16.27	1.16	15.71	59.24	44.47	84.99	90.24
Benchmark	8.83	7.43	23.51	40.41	13.32	47.59	57.36

FUND MANAGER'S COMMENTS

- Global equities pulled back in February driven by a surge in bond yields which stoked inflationary fears. The S&P 500 index edged 0.3% lower as selling pressure broadened to the rest of the market when US Treasury yields soared above 1.5% before retracing back down to 1.4%.
- The MSCI Asia ex-Japan index was up 1.3% in February as the as vaccine rollouts boost sentiment. India led gains as their budget announcement boosted sentiments while tech stocks in East Asia also strong gains. Though, some sell off was seen towards the end of the month amidst increasing bond yields and expectations of higher inflation.
- Chinese stocks were also weaker with the Shanghai Shenzhen CSI 300 Index down 3.0% while the Hang Seng index fell 3.1%. Southbound flows turned negative as sentiment was dampened by Hong Kong's proposal to raise stamp duty on stock trading.
- Thailand's economy continued to climb back from the pandemic blow in the 4Q2020, supported by government stimulus and local demand, but it wasn't enough to keep the economy from its worst full-year showing since the 1998 Asian financial crisis. GDP shrank 4.2% from a year ago, improving from the prior quarter's 6.4% contraction.
- The local market ended February higher with the FBM100 index up 1.8% despite volatile markets during the month as bond yields moved higher.

STRATEGY: We remain constructive on equities on the expectations that global growth would continue on its recovery path in 2021, with continued accommodative policies, positive earnings revision and encouraging vaccine developments.

- However, we will continue to monitor real yields closely as a faster than expected rise could result in an equity market sell-off. A rise in yields not accompanied by an upgrade in growth expectation is also a risk to markets.
- We continue to be positioned in secular growth stocks but are marginally shifting to value names. We look to have a balanced exposure to companies that can grow structurally post vaccine and to reopening plays and cyclicals.
- Reopening/cyclical positions now make up about 20% of the fund. The fund maintains its bias on the technology and medtech sectors as we view these as structural sectors in China.

RISKS

All investment carries some form of risks. The potential key risks include but are not limited to the following:

Market risk	Market risk refers to the possibility that an investment will lose value because of a general decline in financial markets, due to economic, political and/or other factors, which will result in a decline in the target fund's NAV.
Stock specific risk	Prices of a particular stock may fluctuate in response to the circumstances affecting individual companies such as adverse financial performance, news of a possible merger or loss of key personnel of a company. Any adverse price movements of such stock will adversely affect the target fund's NAV.
Credit and default risk	Credit risk relates to the creditworthiness of the issuers of the debentures or money market instruments (hereinafter referred to as "investment") and their expected ability to make timely payment of interest and/or principal. Any adverse situations faced by the issuers may impact the value as well as liquidity of the investment. In the case of rated investment, this may lead to a credit downgrade. Default risk relates to the risk of an issuer of the investment either defaulting on payments or failing to make payments in a timely manner which will in turn adversely affect the value of the investment. This could adversely affect the value of the target fund.
Interest rate risk	This risk refers to the impact of interest rate changes on the valuation of debentures or money market instruments (hereinafter referred to as "investment"). When interest rates rise, the investment prices generally decline and this may lower the market value of the investment. The reverse may apply when interest rates fall.
Warrants investment risk	The value of the warrants will depend on the pricing of the underlying security, whereby the growth and performance prospect of the underlying security would consequentially affect the value of the warrants. In addition, the value of the warrants may decrease exponentially as the warrants approach its maturity date and the potential gains from a favourable price movement of the underlying security may be offset by aggressive time decay. We may consider unwinding these warrants if there are material adverse changes to its value with the aim to mitigate the risk.
Country risk	Investments of the target fund in any country may be affected by changes in the economic and political climate, restriction on currency repatriation or other developments in the law or regulations of the countries in which the target fund invests. For example, the deteriorating economic condition of such countries may adversely affect the value of the investments undertaken by the target fund in those affected countries. This in turn may cause the NAV of the target fund or prices of units to fall.

RISKS (CONTINUED)

All investment carries some form of risks. The potential key risks include but are not limited to the following:

Currency risk

As the investments of the target fund may be denominated in currencies other than the base currency, any fluctuation in the exchange rate between the base currency and the currencies in which the investments are denominated may have an impact on the value of these investments. You should note that any gains or losses arising from the fluctuation in the exchange rate may further increase or decrease the returns of the investment.

Currency risk at the target fund level

The impact of the exchange rate movement between the base currency of the target fund and the currency of the underlying investments (other than in MYR) may result in a depreciation of the value of the investments as expressed in the base currency of the target fund.

Regulatory risk

The investments of the target fund would be exposed to changes in the laws and regulations in the countries the target fund is invested in. These regulatory changes pose a risk to the target fund as it may materially impact the investments of the target fund. In an effort to manage and mitigate such risk, the fund manager seeks to continuously keep abreast of regulatory developments (for example, by closely monitoring announcements on regulators' website and mainstream media) in that country. The fund manager may dispose its investments in that particular country should the regulatory changes adversely impact the policy owners' interest or diminish returns of the target fund.
