FUND MANAGER'S COMMENTS

The Fund decreased by 5.39% during the month, outperformed the benchmark by 0.31%.

Global equities collectively declined in April 2024 as higher-than-expected inflation and resilient consumer demand in the United States cast doubt on the timing of interest-rate cuts from the US Federal Reserve (Fed). Although many companies reported strong earnings, weaker-than expected results and/or guidance from certain firms further dampened investor sentiment. Growth in manufacturing activity was mixed across regions, while services activity generally expanded. Information technology (IT) sector stocks fell to the back of the pack in April with a -5.5% total return on the MSCI All Country World Index (ACWI), relegating them to second-to-last place among the 11 major equity sectors. In terms of IT industries, the steepest declines were seen in IT services and software.

Throughout the current corporate earnings season (covering 1Q24) revealed additional signs that businesses are ready to reengage spending on digital transformation (DT) initiatives, after pulling back for much of 2022 and 2023. We think this will be a gradual increase, not a sharp acceleration. Many companies across a widening array of industries are now experimenting with genAI, looking for ways to deploy the technology for either increased productivity or new revenue-generating opportunities. Our expectation is that this experimentation will evolve into new AI applications over the next few years, which should create a snowball effect for IT demand.

RISKS

All investment carries some form of risks. The potential key risks include but are not limited to the following:

Returns not guaranteed	The investment of the target fund is subject to market fluctuations and its inherent risk. There is NO GUARANTEE on the investment returns, nor any assurance that the target fund's investment objective will be achieved.
Market risk	The value of an investment will decrease or increase due to changes in market factors i.e. economic, political or other events that impact large portions of the market. Market risk cannot be eliminated, hence the target fund's investment portfolio may be prone to changing market conditions that may result in uncertainties and fluctuations in the value of the underlying of the target fund's investment portfolio, causing the NAV or prices of units to fluctuate.
Inflation risk	This is the risk of your investment in the target fund not growing or generating income at a rate that keeps pace with inflation. This would reduce your purchasing power even though the nominal value of the investment in monetary terms has increased.
Currency risk	Currency risk is applicable to class(es) (e.g. Class MYR) which is in a different currency than the base currency of the Fund (i.e. USD). The impact of the exchange rate movement between the base currency of the fund and the currency denomination of the respective classes may result in a depreciation of the value of your holdings as expressed in the base currency. As for the hedged class, the class itself provides mitigation to the currency risk arising from the difference between the currency denomination of the class and the base currency. While Principal aims to fully hedge the currency risk for a hedged class, you should note that it may not entirely eliminate currency risk. In addition, as a result of hedging, a hedged class will not be able to enjoy the full benefits of the currency movement in the event of a favourable movement of the currency denomination of the hedged class against the base currency of the fund. You should also note that hedging incurs costs which will impact the NAV of a hedged Class.
Manager's risk	Since the target fund invests into a collective investment scheme (CIS) managed by another manager, the master fund's manager has absolute discretion over the target fund's investment technique and knowledge, operational controls and management. In the event of mismanagement of the master fund, the NAV of the target fund, which invests into the master fund would be affected negatively.
Country risk	As the target fund invests in the master fund which is domiciled in Luxembourg, the target fund's investments in the master fund may be affected by risks specific to Luxembourg. Changes to laws and regulations of Luxembourg may have an adverse impact on the master fund, and consequently the target fund.

RISKS (CONTINUED)

All investment carries some form of risks. The potential key risks include but are not limited to the following:

**Biotechnology,
Communication and
Technology Sectors
risk**

Investment in the biotechnology, communication and technology sectors may present a greater risk and a higher volatility than investment in a broader range of securities covering different economic sectors. In addition, these sectors may be subject to greater government regulation than other sectors and, as a result, changes to such government regulation may have a material adverse effect on these sectors. Such investments may therefore drop sharply in value in response to market, regulatory or research setbacks in addition to possible adverse effects from the competition of new market entrants, patent considerations and product obsolescence. Particularly within technology, short product cycles and diminishing profit margins are additional factors to consider when investing.
