**TOP HOLDINGS OF THE TARGET FUND (EQUITIES)**

|                                 |      |
|---------------------------------|------|
| Singapore Telecom Ltd           | 3.3% |
| Telkom Indonesia Persero Tbk PT | 2.6% |
| Taiwan Semiconductor Manufac    | 2.2% |
| PTT Exploration & Production    | 1.7% |
| Nan Ya Printed Circuit Board    | 1.6% |

**PERFORMANCE RECORD**

This fund feeds into Affin Hwang AIIMAN Select Income Fund ("target fund") with the objective to provide investors with regular income stream through Shariah-compliant investments. The target fund will invest in a diversified portfolio of Sukuks, Shariah-compliant equities and Islamic money market instruments.

Table below shows the investment returns of Sun Life Malaysia AIIMAN Select Income Fund versus its benchmark as at 28 February 2022:

| %                | YTD   | 1M    | 6M    | 1-Year | 3-Years | 5-Years | Since Inception |
|------------------|-------|-------|-------|--------|---------|---------|-----------------|
| <b>Fund*</b>     | -1.89 | -0.41 | -4.44 | -4.84  | 6.39    | 12.98   | 20.13           |
| <b>Benchmark</b> | -0.12 | 1.52  | -0.79 | -0.59  | 7.06    | 10.69   | 15.84           |

## FUND MANAGER'S COMMENTS

- The broader MSCI Asia ex Japan index ended 2.4% lower in February, dragged down by continued regulatory setbacks in China.
- The FBM 100 index fell 5.1%, buoyed by plantation and commodity-related names which got a boost from the spike in commodities prices over the month.
- Plantation stocks were supported by a surge in CPO prices which pierced new highs. Foreign investors were net buyers of planters as they appear to look past ESG challenges in the sector and also as a rotational trade.
- Corporate earnings saw consumer and plantation names beating estimates. As a reopening play, consumer stocks are benefitting from pent-up demand while plantation stocks benefitted from high CPO prices.
- Malaysia's 4Q21 GDP expanded 3.6% y/y, weaker than expectations. As a result, full year 2021 growth came in at 3.1%, at the low end of the government's forecast range of 3-4%.

### STRATEGY:

- The fund's fixed income exposure was slightly reduced to around 61%, while equity exposure was increased to around 29%.
- We maintain our expectations for FY22 growth forecast of 5-6%. The successful vaccination program, expansionary fiscal policy, recovery in the labour market, and positive investment indicators point to a strong pick-up in the quarters ahead. Downside risks include a challenging COVID recovery period, persistent supply-side disruptions and elevated geopolitical risks affecting both economic activity and the inflation outlook. Another risk may be severe financial market disruptions due to aggressive global central bank tightening.
- We opine BNM's OPR path will still be data dependent on the pace of domestic economic recovery than the pace of US rate hike. While current valuations are attractive, large bond supply in 1H 2022 and elevated USTs could result in domestic yields remaining under pressure. On this note, we view BNM to only hike in 2H2022 by 25 to 50bps, i.e. 1-2 hikes depending on growth trajectory. Unlike the US, Malaysia's inflation data in Jan has not made the case for urgency. Imported inflation remains a risk on the back of high oil price and broad-based commodity price increases, though transmission to consumer prices will be muted by subsidies and Malaysia being a net exporter of oil.
- *Rates strategy:* US Treasuries volatility and large bond supply will likely see a volatile rates environment - maintain a trading stance for government bonds
- *Credit strategy:* Prefer stronger and higher rated names, and to participate in primary issuances for better yield.
- *Duration strategy:* Remain cautious and to maintain short to neutral duration vs benchmark. We expect meaningful yield compression to only occur in 2H22.
- For equities, we favor beneficiaries of further economic and border reopening as Malaysia looks to move towards Covid endemicity. This includes companies that benefits from a return of tourism such as aviation, and consumer companies. We also like technology companies, where we see value emerging after the recent heavy selloff, and which has strong earnings visibility driven by secular growth trends (e.g. 5G, electric vehicle, solar energy).

## RISKS

All investment carries some form of risks. The potential key risks include but are not limited to the following:

|   |  |
|---|--|
| <b>Manager's Risk</b>                             | This risk refers to the day-to-day management of the target fund by Affin Hwang which will impact the performance of the target fund. For example, investment decisions undertaken by Affin Hwang as a result of an incorrect view of the market or any non-compliance with internal policies, investment mandate, the deed, relevant law or guidelines due to factors such as human error, fraudulent, dishonesty or weaknesses in operational process and systems, may adversely affect the performance of the target fund.  |
| <b>Inflation Risk</b>                             | This is the risk that your investment in the target fund may not grow or generate income at a rate that keeps pace with inflation. This would reduce your purchasing power even though the value of the investment in monetary terms has increased.  |
| <b>Credit/Default risk</b>                        | Credit risk relates to the creditworthiness of the issuers of the investment (Sukuk and Islamic money markets instruments) and their expected ability to make timely payment of profit and/or principal. Any adverse situations faced by the issuers may impact the value as well as liquidity of the investment. In the case of rated investments, this may lead to a credit downgrade. Default risk relates to the risk of an issuer of the investment either defaulting on payments or failing to make payments in a timely manner which will in turn adversely affect the value of the investment. This could adversely affect the value of the target fund.   |
| <b>Counterparty risk</b>                          | This risk concerns with the target fund's investment in Shariah-compliant derivatives where the other party in an agreement may default on the terms of the agreement. Generally, counterparty risk can be reduced by emphasis on credit analysis of the counterparty to determine its creditworthiness.   |
| <b>Interest rate risk</b>                         | <p>Interest rate risk refers to the impact of interest rate changes on the valuation of Sukuk. When interest rates rise, Sukuk's prices generally decline and this may lower the market value of the target fund's investment in Sukuk. The reverse may apply when interest rates fall. In order to mitigate interest rate risk, Affin Hwang will need to manage the debt portfolio taking into account the coupon rate and time to maturity of the Sukuk.</p> <p>Note: Interest rate is a general indicator that will have an impact on the management of the target fund regardless of whether it is a Shariah-based fund or otherwise. It does not in any way suggest that the target fund will invest in conventional financial instruments.</p> |
| <b>Stock Specific Risk</b>                        | Prices of a particular Shariah-compliant stock may fluctuate in response to the circumstances affecting individual companies such as adverse financial performance, news of a possible merger or loss of key personnel of a company. Any adverse price movements of such Shariah-compliant stock will adversely affect the target fund's NAV.  |
| <b>Shariah-compliant warrants investment risk</b> | The value of the Shariah-compliant warrants will depend on the pricing of the underlying security whereby the growth and performance prospect of the underlying security would consequentially affect the value of the Shariah-compliant warrants. In addition, the value of the Shariah-compliant warrants may decrease exponentially as the Shariah-compliant warrants approach their maturity date and the potential gains from a favourable price movement of the underlying security may be offset by aggressive time decay. Affin Hwang may consider unwinding these Shariah-compliant warrants if there are material adverse changes to its value with the aim to mitigate the risk.  |

**RISKS (CONTINUED)**

**Liquidity risk**

Liquidity risk arises in two scenarios. The first scenario is where an investment cannot be sold due to unavailability of a buyer for that investment. The second scenario exists where the investment, by its nature, is thinly traded. This will have the effect of causing the investment to be sold below its fair value which would adversely affect the NAV of the target fund.

**Currency risk**

As the investments of the target fund may be denominated in currencies other than the base currency, any fluctuation in the exchange rate between the base currency and the currencies in which the investments are denominated may have an impact on the value of these investments. You should note that any gains or losses arising from the fluctuation in the exchange rate may further increase or decrease the returns of the investment.

**Regulatory risk**

The investments of the target fund will be exposed to changes in the laws and regulations in the countries the target fund is invested in. These regulatory changes pose a risk to the target fund as it may materially impact the investments of the target fund. In an effort to manage and mitigate such risk, Affin Hwang seeks to continuously keep abreast of regulatory developments (for example, by closely monitoring announcements on regulators' website and mainstream medias) in that country. Affin Hwang may dispose its investments in that particular country should the regulatory changes adversely impact the unit holders' interest or diminish returns to the target fund.

**Country risk**

Investments of the target fund in any country may be affected by changes in the economic and political climate, restriction on currency repatriation or other developments in the law or regulations of the countries in which the target fund invests in. For example, the deteriorating economic condition of such countries may adversely affect the value of the investments undertaken by the target fund in those affected countries. This in turn may cause the NAV of the target fund to fall.

**Reclassification of Shariah status risk**

This risk refers to the risk that the currently held Shariah-compliant equities in the target fund may be reclassified to be Shariah non-compliant in the periodic review of the equities by the Shariah Advisory Council of the Securities Commission Malaysia (SACSC), the Shariah Adviser or the Shariah boards of the relevant Islamic indices. If this occurs, Affin Hwang will take the necessary steps to dispose of such equities. There may be opportunity loss to the target fund due to the target fund not being allowed to retain the excess capital gains derived from the disposal of the Shariah non-compliant equities. Affin Hwang will be required to dispose of these equities immediately if the prices are above the purchase price. Should the prices be below the purchase price, Affin Hwang may choose to hold on to these holdings until the prices meet the purchase price. Nevertheless, should Affin Hwang decide to dispose of these equities below the purchase price, the target fund will be faced with the risk of realising its losses, thus negatively impacting the NAV of the target fund.
