PERFORMANCE RECORD

This fund feeds into Principal Global Titans Fund (“target fund”) with the objective to achieve medium to long-term capital gains by investing into the US, Europe and Japan equities while having some Malaysia equities exposure to counter the short-term volatility in the global equities markets.

Table below shows the investment returns of Sun Life Malaysia Global Titans Fund versus its benchmark as at 30 November 2020:

%	YTD	1M	6M	1-Year	3-Years	5-Years	Since Inception
Fund*	8.59	8.18	9.64	8.93	20.75	37.91	85.81
Benchmark	6.81	10.17	10.91	7.86	21.47	44.21	88.60

FUND MANAGER'S COMMENTS

The Fund (Class MYR) increased by 8.18% during the month of November 2020, underperforming the benchmark by 199bps. Year-to-date, the Fund increased by 8.59%, outperforming the benchmark by 178 bps.

Developed equity market rallied strongly in November with MSCI US, Europe and Japan returned 10.95%, 16.97% and 12.59% respectively in USD terms. Markets turned risk-on mode after a Joe Biden victory for US election and positive announcements that Pfizer, Moderna and AstraZeneca vaccines were effective and shall be approved soon by governments for mass use.

Economic activity represented by PMI continue to improve across developed markets. Japan's recovery is lagging with PMI still in contraction zone. US manufacturing PMI momentum improved from 53.4 to 56.7 with unemployment rate falling to 6.9%. Europe's manufacturing PMI moderated slightly to 54.3. The next 12-months corporate earnings are revised higher across all developed markets with Europe leading the positive earnings revision. The scale of future US fiscal stimulus depends on which party controls senate, which will be determined on January 05, 2021. Central banks will remain supportive in monetary policy. The Fed's shift in monetary policy strategy from flexible inflation targeting to average inflation targeting reaffirmed our belief that interest rates will stay low for longer. US valuation has come down to slightly higher than historical long-term mean after market correction.

We remain neutral on all developed markets as we expect short-term market volatility to remain high on the scale and scope of the policy support and surging infections in US and Europe. The second wave of lockdowns in Europe may put pressure on economic activities in the region. We are neutral Japan because of its lagging economic recovery. We maintain our view that the global economy should continue its recovery over the next 12 months, despite near term uncertainties. We think the resurgence of virus cases would be contained by better awareness, testing and contact tracing and the availability of vaccines to the public. Markets will continue to be supported by low interest rates and ample liquidity.

RISKS

All investment carries some form of risks. The potential key risks include but are not limited to the following:

<p>Market risk</p>	<p>Market risk is the risk of negative movement that affects the price of all assets in a particular capital market. The factors influencing the performance of the markets include:</p> <ul style="list-style-type: none"> • Economic and financial market conditions • Political change • Broad investor sentiment • Movements in interest rate and inflation • Currency risks <p>Stock values fluctuate in response to the activities and performance of individual companies and general market or economic conditions. Such movements in the underlying values of the share of the investment portfolio will cause the NAV or prices of units to fall as well as rise. Market risk is mitigated through careful selection of securities and diversification through spreading of risk across a basket of assets and/or sectors.</p>
<p>Security risk</p>	<p>Security risk applies to individual companies or securities. Examples include the possible effect on a company of losing a key executive or the unforeseen entry of a new competitor into the market. The risk is mitigated by the fund manager's periodic research and analysis on all the underlying securities held by the fund.</p>
<p>Foreign Currency risk</p>	<p>This risk is associated with investments that are quoted and/or priced in foreign currency denomination. Malaysian based investors should be aware that if the RM appreciates against the currencies in which the portfolio of the investment is denominated, this will have an adverse effect on the NAV of the Fund and vice versa. Investors should note that any gains or losses arising from the movement of the foreign currencies against its home currency may therefore increase/decrease the capital gains of the investment. Nevertheless, investors should realise that currency risk is considered as one of the major risks to investments in foreign assets due to the volatile nature of the foreign exchange market. The risk is mitigated through a combination of fund's exposure into the U.S, European, Japanese and Malaysia equities.</p>
<p>Credit risk</p>	<p>The risk of loss of principal or loss of a financial reward stemming from counterparty's failure to repay a loan or otherwise meet a contractual obligation. This risk is primarily applicable to the liquid assets of this fund. Credit risk is mitigated by fund manager's periodic reviews and analysis.</p>
<p>Country risk</p>	<p>A fund investing in foreign countries may be affected by risks specific to the countries in which it invests. Such risks include changes in the country's economic fundamentals, social and political stability, currency movements and foreign investment policies. These factors may have an impact on the prices of the Fund's investment in that country and consequently may also affect the fund's NAV and its growth. To mitigate this risk, the fund manager will diversify securities investment that spread across various countries.</p>
