FUND MANAGER'S COMMENTS

- Global equities rose in November buoyed by positive vaccine developments and reduced overhang on US politics. The MSCI AC World Index rose by 12.3% while the MSCI Asia-ex Japan index closed 8.0% higher.
- The KLCI closed 7.2% higher lifted by positive sentiment as Budget 2021 was passed at the policy stage. The Budget will now be debated and voted at the committee stage and final voting is slated to take place mid-Dec.
- The absence windfall in Budget 2021 was positive for the glove sector, while the tobacco sector could also benefit from proposed measures to clamp down on illicit cigarettes. Construction players were also seen as beneficiaries as transport and infrastructure projects will continue.
- The local market was also supported by positive developments on the vaccine front, which fueled a rally in banking stocks as well as sector reopening plays such as gaming, airport and hospitality.
- It was announced that eligible EPF members would be permitted to take an advance from their Account 1. To raise the funds needed to facilitate the potential withdrawals, the EPF will need to sell some of its assets and rebalance its portfolio.
- **STRATEGY:** The fund's invested levels was maintained at around 85% during the month. The fund remains positioned in quality large-cap Shariah-compliant stocks in the domestic market.
- The Budget 2021 announced was seen as market neutral. The record spending will be channeled to help vulnerable segments of the society. Impact to Corporate Malaysia is muted.
- Politics remains a key risk together with the possibility that Budget 2021 may be rejected. The outcome is difficult to call, hence we have limited exposure to politically linked stocks.
- Over the month, continued to take profit on glove names, while adding to plantation stocks, and to exporters such as tech and electronic manufacturing service companies.
- The fund will look to redeploy into economic recovery beneficiaries and quality stocks currently trading at attractive valuations

RISKS

All investment carries some form of risks. The potential key risks include but are not limited to the following:

| | |
|------------------------------------|--|
| <p>Market risk</p> | <p>Market risk arises because of factors that affect the entire marketplace. Factors such as economic growth, political stability and social environment are some examples of conditions that have an impact on businesses, whether positive or negative. Market risk cannot be eliminated by diversification. It stems from the fact that there are economy-wide perils which threaten all businesses. Hence, investors will be exposed to market uncertainties and no matter how many Shariah-compliant securities are held, fluctuations in the economic, political and social environment will affect the market price of the Shariah-compliant investments either in a positive or negative way.</p> |
| <p>Fund management risk</p> | <p>The performance of a unit trust fund depends on the experience, expertise and ability of the Fund Manager to generate returns. Lack of any of the above mentioned may adversely affect the performance of the Target Fund.</p> |
| <p>Performance risk</p> | <p>There is no guarantee in relation to the investment returns.</p> |
| <p>Inflation risk</p> | <p>Inflation rate risk is the risk of potential loss in the purchasing power of investment due to a general increase of consumer prices. Inflation erodes the nominal rate of return giving a lower real rate of return. Inflation is thus one of the major risks and results in uncertainty over the future value of investments. Take note that the funds are not constituted with the objective of matching the inflation rate of Malaysia. The Target Fund has a specific objective that it seeks to achieve without having regard to the inflation rate. This fund may not be suitable for investors whose objective is to match the inflation rate (so as not to lose purchasing power over time).</p> |
| <p>Liquidity risk</p> | <p>Liquidity risk arises in two scenarios. The first is where the Funds' investment cannot be sold due to unavailability of a buyer for that investment. The second scenario exists where the Funds' investment, by its nature, is thinly traded. This will have the effect of causing the Funds' investment to be sold below its fair value.</p> |
| <p>Credit/Default risk</p> | <p>Credit risk refers to the possibility that the issuer or financial institution of a Shariah-compliant securities or instruments or deposit placements will not be able to make timely payments of profit or principal payment on the maturity date. This may lead to a default in the payment of principal and profit and ultimately a reduction in the value of the Target Fund.</p> |
| <p>Profit rate risk</p> | <p>The level of profit rates has an impact on the value of investments and economic growth of a country. High profit rates dampen investments and aggregate demand leading to an economic slowdown. The value of Sukuk move in the opposite direction of profit rates, any increase in rates will lead to a reduction in the value of Sukuk, thus affecting the NAV of unit trust funds.</p> <p>The profit rate is a general economic indicator that will have an impact to the management of the Target Funds, regardless of whether it is a Shariah-compliant fund or otherwise. It does not in any way suggest that this Target Fund will invest in conventional financial instruments.</p> |

RISKS (CONTINUED)

| | |
|---|--|
| <p>Non-compliance risk</p> | <p>The establishment of these Target Funds follow rules set out in the Deed and the Guidelines. There is a risk that the Fund Manager may not observe the rules whether intentionally or through inadvertence. Whilst not every non-observance to the rules governing the Target Funds will necessarily result in some losses to the Target Funds, the investors cannot discount the risk that losses may be suffered by the Target Funds if the non-observance of the rules is serious. This may occur, for instance, if the Fund Manager decides to buy an instrument which is not permitted, whether intentionally or through inadvertence, and thereafter having to sell that instrument which may be at a loss to the Target Funds.</p> |
| <p>Reclassification of Shariah status risk</p> | <p>This risk refers to the risk that the currently held Shariah-compliant securities by the Target Funds may be reclassified to be Shariah non-compliant in the periodic review of the securities by the Shariah Advisory Council of Securities Commission Malaysia (SACSC) or the Shariah Adviser for the Target Fund. If this occurs, then the value of the Target Fund may be adversely affected and the Fund Manager will take the necessary steps to dispose of such securities in accordance with the advice from the Shariah Adviser.</p> |
| <p>Equity investment risk</p> | <p>This is the risk associated with investing in a particular equity. The value of individual equity is mainly determined by its potential growth in earnings, sound management, and treatment of minority shareholders, as well as a myriad of other factors. Failure to achieve these would result in declining investment value which in turn affects the performance of the Target Fund. This can be mitigated by diversifying the Target Fund's portfolios.</p> |
