FUND MANAGER'S COMMENTS

During the month, our Fund declined 0.90% in MYR terms, outperforming the benchmark by 141 basis points (bps) due to our underweights in South Korea and India. Year-to-date, our Fund declined 10.99%, underperforming the benchmark by 407 basis points, mainly due to our structural underweight in TSMC up till August, constrained by single stock limits. This issue was alleviated in September with the removal of TSMC from the benchmark, leading to improved relative performance.

The Federal Reserve enters 2025 navigating a fragile balancing act. At its December meeting, the FOMC delivered its third consecutive rate cut, bringing the policy rate to 4.25-4.50%. However, sticky inflation, resilient economic growth and policy uncertainty from the incoming administration have left the Fed with limited room to manoeuvre. The US futures market is projecting fewer than only one rate cut in 2025. Regarding trade tariffs, countries with deep domestic economies, such as India and those in ASEAN, are more insulated. The new US administration's transactional approach could also open up opportunities on a case-by-case basis, though it is still too early to predict. In China, policymakers have an open-ended commitment to support growth since September. The upcoming National People's Congress in March is key for further policymaking. We favor companies that have self-help initiatives that can grow regardless of stimulus. In India, we expect fiscal and monetary policy to turn more stimulative in 2025 to address the economic slowdown. Government execution on capital expenditure spending is also highly anticipated.

We remain fully invested and well positioned in the areas of a) broad-based exposure across India in healthcare, property and selected consumer sectors b) selected technology names across foundry, IT services, software, internet c) ideas where return drivers are not major macro factors, e.g. ASEAN, energy transmission and data centers. During the month, we bought a travel-oriented company in India and selected names in South Korea where valuations have been beaten down and risk-reward looks more attractive.

RISKS

All investment carries some form of risks. The potential key risks include but are not limited to the following:

Stock specific risk	Prices of a particular stock may fluctuate in response to the circumstances affecting individual companies such as adverse financial performance, news of a possible merger or loss of key personnel of a company. Any adverse price movements of such stock will adversely affect the target fund's NAV.
Country risk	Investments of the target fund in any country may be affected by changes in the economic and political climate, restriction on currency repatriation or other developments in the law or regulations of the countries in which the target fund invests. For example, the deteriorating economic condition of such countries may adversely affect the value of the investments undertaken by the target fund in those affected countries. This in turn may cause the NAV of the target fund or price of units to fall.
Currency risk	As the investments of the target fund may be denominated in currencies other than the base currency of the target fund, any fluctuation in the exchange rate between the base currency of the target fund and the currencies in which the investments are denominated may have an impact on the value of these investments. You should be aware that if the currencies in which the investments are denominated depreciate against the base currency of the target fund, this will have an adverse effect on the NAV of the target fund in the base currency of the target fund and vice versa. You should note that any gains or losses arising from the fluctuation in the exchange rate may further increase or decrease the returns of the investment.
Risks associated with investment in warrants and/or options	There are inherent risks associated with investment in warrants and/or options. The value of warrants and/or options are influenced by the current market price of the underlying security, the exercise price of the contract, the time to expiration of the contract and the estimate of the future volatility of the underlying security's price over the life of the contract. Generally, the erosion in value of Shariah-compliant warrants accelerates as it approaches its expiry date. Like securities, Principal will undertake fundamental research and analysis on these instruments with an aim to mitigate its risks.
Credit/Default risk	The target fund will be exposed to a certain degree of credit and default risk of issuers or counterparties when the target fund invests in Sukuk and/or place Islamic deposits. Credit risk relates to the creditworthiness of the securities issuers or counterparties and their expected ability to make timely payment of profit and/or principal. Any adverse situations faced by the issuers or counterparties may impact the value as well as liquidity of the investments. In the case of rated Sukuk, this may lead to a credit downgrade. Default risk relates to the risk that a securities issuer or counterparty either defaulting on payments or failing to make payments in a timely manner which will in turn adversely affect the value of the investments. This could adversely affect the value of the target fund. Principal aims to mitigate this risk by performing bottom-up and top-down credit research and analysis to determine the creditworthiness of its issuers or counterparties, and impose investment limits on exposures for issuers or counterparties with different credit profiles as a precautionary step to limit any loss that may arise directly or indirectly as a result of a defaulted transaction.

RISKS (CONTINUED)

Interest rate risk

Interest rate risk refers to the impact of interest rate changes on the valuation of Sukuk and Islamic money market instruments. When interest rates rise, Sukuk and Islamic money market instruments' prices generally decline and this may lower the market and Islamic money market instruments. In managing the Sukuk, Principal takes into account the coupon rate and time to maturity of the Sukuk with an aim to mitigate the interest rate risk. As for Islamic money market instruments, the typical tenor of these instruments are less than 12-month maturity and unlike Sukuk, any change to interest rate will only have a minor impact to the prices of these instruments.

Note: Please note that although Sukuk is a non-interest bearing instrument, its price movement is correlated to the movement in the interest rates. As such, investment in Sukuk will have an exposure to the movement of the interest rates. Even though the target fund does not invest in interest bearing instruments, the interest rate referred herein is to the general interest rate of the country, which may affect the value of the investment of the target fund.

Risk associated with investing in CIS

Since the target fund may invest into Islamic CIS, there is a risk of concentration into Islamic CIS, in which the Islamic CIS's management company has absolute discretion over the Islamic CIS's investment technique and knowledge, operational controls and management. In the event of mismanagement of the Islamic CIS and/or the management company, the NAV of the target fund, which invests into those Islamic CIS would be affected negatively. Should the situation arise, Principal will seek for another Islamic CIS that is consistent with the objective of the target fund.
