FUND MANAGER'S COMMENTS

- Global markets closed on a positive note buoyed by optimism surrounding the rollout of COVID-19 vaccines. The S&P 500 index edged 1.0% higher in December as uncertainties surrounding the fiscal stimulus bill were allayed.
- The local market tracked regional gains with the benchmark KLCI closing 1.6% higher. The index closed the year up 2.4% buoyed by a liquidity-driven rally as lower interest rates boost risk appetite.
- Budget 2021 was passed in Dewan Rakyat despite efforts by the opposition to thwart the bill.
- The slim majority averted a collapse in the Perikatan Nasional government that could potentially pave the way for snap elections.
- The Securities Commission Malaysia and Bursa announced they will uplift restrictions on regulated short-selling in January 2021. However, the regulator extended the ban on intraday short-selling activities until the end of February 2021.
- **STRATEGY:** The fund's invested levels was maintained at around 87% during the month. The fund remains positioned in quality large-cap Shariah-compliant stocks in the domestic market.
- We anticipate 8.0-10.0% upside potential for KLCI in 2021. Liquidity remains the key driver to market and we expect rates to remain low to spur growth.
- In addition, the gradual rollout of vaccine in 2Q2021 will allow economic activities to normalise. However, due to vaccine timing, we think that earnings will be back loaded in 2H2021.
- Recovery-plays including banks, commodities, consumer and hospitality could come back into favor as more parts of the economy reopen. We also continue to favor trade divergence plays and technology sector which offers strong earnings visibility.
- Politics remains a key risk. The outcome is difficult to call, hence we have limited exposure to politically linked stocks.
- Over the month, continued to add to plantation stocks, and to exporters such as tech and electronic manufacturing service companies.
- The fund will look to redeploy into economic recovery beneficiaries and quality stocks currently trading at attractive valuations.

RISKS

All investment carries some form of risks. The potential key risks include but are not limited to the following:

<p>Market risk</p>	<p>Market risk arises because of factors that affect the entire marketplace. Factors such as economic growth, political stability and social environment are some examples of conditions that have an impact on businesses, whether positive or negative. Market risk cannot be eliminated by diversification. It stems from the fact that there are economy-wide perils which threaten all businesses. Hence, investors will be exposed to market uncertainties and no matter how many Shariah-compliant securities are held, fluctuations in the economic, political and social environment will affect the market price of the Shariah-compliant investments either in a positive or negative way.</p>
<p>Fund management risk</p>	<p>This risk refers to the day-to-day management of the target fund by Affin Hwang which will impact the performance of the target fund. For example, investment decisions undertaken by Affin Hwang as a result of an incorrect view of the market or any non-compliance with internal policies, investment mandate, the deed, relevant law or guidelines due to factors such as human error, fraudulence, dishonesty or weaknesses in operational process and systems, may adversely affect the performance of the target fund.</p>
<p>Performance risk</p>	<p>There is no guarantee in relation to the investment returns.</p>
<p>Inflation risk</p>	<p>This is the risk that your investment in the target fund may not grow or generate income at a rate that keeps pace with inflation. This would reduce your purchasing power even though the value of the investment in monetary terms has increased.</p>
<p>Liquidity risk</p>	<p>Liquidity risk arises in two scenarios. The first scenario is where the target fund's investment cannot be sold due to unavailability of a buyer for that investment. The second scenario exists where the target fund's investment, by its nature, is thinly traded. This will have the effect of causing the target fund's investment to be sold below its fair value which would adversely affect the NAV of the target fund.</p>
<p>Credit/Default risk</p>	<p>Credit risk relates to the creditworthiness of the issuers of the investment (Islamic money market instruments) and their expected ability to make timely payment of interest and/or principal. Any adverse situations faced by the issuers may impact the value as well as liquidity of the investment. In the case of rated investments, this may lead to a credit downgrade. Default risk relates to the risk of an issuer of the investment either defaulting on payments or failing to make payments in a timely manner which will in turn adversely affect the value of the investment. This could adversely affect the value of the target fund.</p>
<p>Equity investment risk</p>	<p>This is the risk associated with investing in a particular equity. The value of individual equity is mainly determined by its potential growth in earnings, sound management, and treatment of minority shareholders, as well as a myriad of other factors. Failure to achieve these would result in declining investment value which in turn affects the performance of the target fund. This can be mitigated by diversifying the target fund's portfolios.</p>

RISKS (CONTINUED)

Reclassification of Shariah status risk

This risk refers to the risk that the currently held Shariah-compliant securities by the target fund may be reclassified to be Shariah non-compliant in the periodic review of the equities by the Shariah Advisory Council of the Securities Commission Malaysia (SACSC), the Shariah Adviser for the target fund or the Shariah boards of the relevant Islamic indices.

If this occurs, Affin Hwang will take the necessary steps to dispose of such equities. There may be opportunity loss to the target fund due to the target fund not being allowed to retain the excess capital gains derived from the disposal of the Shariah non-compliant equities. Affin Hwang will be required to dispose of these equities immediately if the prices are above the purchase price. Should the prices be below the purchase price, Affin Hwang may choose to hold on to these holdings until the prices meet the purchase price. Nevertheless, should Affin Hwang decide to dispose of these equities below the purchase price, the target fund will be faced with the risk of realising its losses, thus negatively impacting the NAV of the target fund.

Shariah-compliant warrants investment risk

The value of the Shariah-compliant warrants (“warrants”) will depend on the pricing of the underlying security whereby the growth and performance prospect of the underlying security would consequentially affect the value of the warrants. In addition, the value of the warrants may decrease exponentially as the warrants approach its maturity date and the potential gains from a favourable price movement of the underlying security may be offset by aggressive time decay. Affin Hwang may consider unwinding these warrants if there are material adverse changes to its value with the aim to mitigate the risk.
