FUND MANAGER'S COMMENTS

The Fund was up 6.71% in MYR terms in July, underperforming the benchmark by 54bps. YTD, the Fund is down 10.05%, underperforming the benchmark by 211bps.

Developed markets rebounded as investors look for the peak of the Fed's hawkishness against weaker economic growth. S&P 500 Index, MSCI Europe and MSCI Japan increased by 9.2%, 7.6% and 4% respectively MTD in local currency term. The US Dollar continued to strengthen by 1.2%, Japanese Yen appreciated by 1.8% and Euro depreciated by 2.5%. US 10-year bond yield was at 2.7% at the time of writing. Growth stocks outperformed Value stocks.

Economic growth continues to weaken across all developed markets as reflected by weaker manufacturing PMI. However, ISM services PMI rebounded strongly. There is also indication of some easing in price pressures although labor market remains tight in US. Housing starts declined by 2% MoM in June, but inventory level and homeowner vacancy rate remain low. The downside to housing market would be limited by the under-supply situation. Forward 12-month corporate earnings are revised down for US and Europe but stay flat for Japan. Earnings downgrades are in materials and communication services sector whereas energy sector continues to see upgrade.

We increase allocation to US and mainly in growth active funds on the expectation that growth stocks may continue to outperform if inflation is easing towards end of the year, which may mark the peak of Fed's hawkishness. If this happens, growth stocks valuation may be supported moving forward. Our underlying funds have focused on investing in quality companies with growth and earnings visibility, at reasonable valuation. We maintain neutral allocations to Europe and Japan. Moving forward, Fed's monetary tightening path and whether economy would have a soft or hard landing, as well as the recent US-China conflict may continue to weigh on equity markets.

RISKS

All investment carries some form of risks. The potential key risks include but are not limited to the following:

Market risk	Market risk refers to the possibility that an investment will lose value because of a general decline in financial markets, due to economic, political and/or other factors, which will result in a decline in the target fund's NAV.
Stock specific risk	Prices of a particular stock may fluctuate in response to the circumstances affecting individual companies such as adverse financial performance, news of a possible merger or loss of key personnel of a company. Any adverse price movements of such stock will adversely affect the target fund's NAV.
Country risk	Investments of the target fund in any country may be affected by changes in the economic and political climate, restriction on currency repatriation or other developments in the law or regulations of the countries in which the target fund invests. For example, the deteriorating economic condition of such countries may adversely affect the value of the investments undertaken by the target fund in those affected countries. This in turn may cause the NAV of the target fund or prices of units to fall.
Currency risk	As the investments of the target fund may be denominated in currencies other than base currency, any fluctuation in the exchange rate between the base currency and the currencies in which the investments are denominated may have an impact on the value of these investments. You should be aware that if the currencies in which the investments are denominated depreciate against the base currency, this will have an adverse effect on the NAV of the target fund and vice versa. You should note that any gains or losses arising from the fluctuation in the exchange rate may further increase or decrease the returns of the investment.
Fund manager's risk	Since the target fund invests into collective investment scheme managed by another manager, the fund manager has absolute discretion over the fund's investment technique and knowledge, operational controls and management. In the event of mismanagement of the fund and/or the management company, the NAV of the target fund, which invests into the fund would be affected negatively. Although the probability of such occurrence is minute, should the situation arise, Principal (S) will seek for an alternative collective investment scheme that is consistent with the objective of the target fund.

RISKS (CONTINUED)

All investment carries some form of risks. The potential key risks include but are not limited to the following:

Credit and default risk

Investments of the target fund may involve a certain degree of credit and default risk. Generally, credit and default risk is the risk of loss due to the counterparty's and/or issuer's non-payment or untimely payment of the investment amount as well as the returns on investment. Principal (S) aims to mitigate this risk by performing fundamental credit research and analysis to determine the creditworthiness of its counterparty and/or issuer.
