## PERFORMANCE RECORD

The Fund feeds into AHAM Select Asia (ex Japan) Quantum Fund (“target fund”) with the objective of achieving capital appreciation over the medium to long-term by investing in Asia (ex Japan) equities with market capitalization of not more than USD1.5 billion at the time of investment. However, the target fund would also have an option to invest into companies with a market capitalization of not more than USD3.0 billion at the time of investment, which will be capped at no more than 30% of the Net Asset Value (NAV) of the target fund.

Table below shows the investment returns of Sun Life Malaysia Select Asia (ex Japan) Quantum Fund versus its benchmark as at 29 November 2024:

%	YTD	1M	6M	1-Year	3-Years	5-Years	Since Inception
<b>Fund*</b>	-11.10	-1.05	-7.38	-13.34	-16.25	23.10	48.36
<b>Benchmark</b>	2.40	-0.87	-3.97	4.71	6.48	57.90	84.90

\* Calculation of past performance is based on NAV-to-NAV

#### FUND MANAGER'S COMMENTS

- The S&P 500 surged by 5.73% in November, fueled by optimism following Donald Trump's election victory. Anticipated market-friendly policies contributed to the rally. Investors were further reassured by the nomination of Scott Bessent as Treasury Secretary, known for his fiscal prudence. His moderate stance on tariffs and emphasis on deficit reduction, coupled with a target of achieving 3% GDP growth by 2028, helped temper inflationary concerns and bolster confidence.
- The U.S. Treasury market saw significant fluctuations post-election. The benchmark 10-year Treasury yield spiked to 4.47% before easing to 4.17% by the end of the month as the Federal Reserve struck a dovish tone, reiterating its data-dependent approach. Meanwhile, Core PCE inflation reached 2.8% y-o-y, its highest level since April 2024 but significantly below the 2022 peak of ~6%. This suggests limited impact on the Fed's policy direction ahead of its December FOMC meeting.
- In Asia, markets were under pressure, with the MSCI Asia ex-Japan index dropping 3.36% amid concerns over potential trade conflicts and a stronger U.S. dollar under Trump's presidency. Emerging markets (excluding China) experienced \$16 billion in foreign outflows, with Indonesia and the Philippines suffering 6–7% declines. In China, the MSCI China index fell 4.40%, as investors were unimpressed by a 10 trillion renminbi debt package aimed at easing local government financial strains, viewing it as insufficient given potential trade tensions.
- Malaysia's market proved resilient, with the KLCI index posting a modest 0.47% gain. Malaysia's economic fundamentals remained strong, with GDP expanding 5.3% y-o-y in 3Q2024 and YTD growth at 5.2%, although inflation risks linger as subsidy adjustments loom. Bank Negara Malaysia held the Overnight Policy Rate (OPR) steady at 3.00%, emphasizing ample buffers to manage currency volatility.

#### STRATEGY:

- The funds return was -1.9% against the benchmark return of -0.9%. The biggest detractor were coming from export countries like Taiwan, South Korea and Philippines, which saw market outflows due to potential Trump tariffs.
- China + HK exposure was a positive for the month, as the holdings were domestic driven companies which are relatively unaffected by Trump winning the election, and the impact from Tariff would be relatively muted on the holdings.
- Instead stock specific like Medlive performed over the month, as the company saw less negative news flow from China's anti-corruption movement which has helped investor sentiment. The manager continues to like the company given the spending recovery in healthcare.
- As for the South Korea, the manager views that the recent drastic moves by President Yoon might introduce some volatility, but focus should be on Trump's policies and tariffs once he is in office, which might significantly impact exporters.
- Meanwhile Malaysia performance was relatively flat over the month and continue to hold its position, with exception of Hiap Teck, which the fund has exited the position given oversupply of steel which might affect steel price and the companies earnings.
- Fund Manager thesis on cyclical recovery in semiconductor demand remains intact as Ai chips related demand remain robust with ROI for AI Capex is still high.
- The fund currently holds around 9% cash, which the fund manager might deploy in the event of any market weakness or to capture better opportunity.

## RISKS

All investment carries some form of risks. The potential key risks include but are not limited to the following:

<b>Market risk</b>	Market risk refers to the possibility that an investment will lose value because of a general decline in financial markets, due to economic, political and/or other factors, which will result in a decline in the target fund's NAV.
<b>Stock specific risk</b>	Prices of a particular stock may fluctuate in response to the circumstances affecting individual companies such as adverse financial performance, news of a possible merger or loss of key personnel of a company. Any adverse price movements of such stock will adversely affect the target fund's NAV.
<b>Credit and default risk</b>	Credit risk relates to the creditworthiness of the issuers of the debentures or money market instruments (hereinafter referred to as "investment") and their expected ability to make timely payment of interest and/or principal. Any adverse situations faced by the issuers may impact the value as well as liquidity of the investment. In the case of rated investment, this may lead to a credit downgrade. Default risk relates to the risk of an issuer of the investment either defaulting on payments or failing to make payments in a timely manner which will in turn adversely affect the value of the investment. This could adversely affect the value of the target fund.
<b>Interest rate risk</b>	This risk refers to the impact of interest rate changes on the valuation of debentures or money market instruments (hereinafter referred to as "investment"). When interest rates rise, the investment prices generally decline and this may lower the market value of the investment. The reverse may apply when interest rates fall.
<b>Warrants investment risk</b>	The value of the warrants will depend on the pricing of the underlying security, whereby the growth and performance prospect of the underlying security would consequentially affect the value of the warrants. In addition, the value of the warrants may decrease exponentially as the warrants approach its maturity date and the potential gains from a favourable price movement of the underlying security may be offset by aggressive time decay. We may consider unwinding these warrants if there are material adverse changes to its value with the aim to mitigate the risk.
<b>Country risk</b>	Investments of the target fund in any country may be affected by changes in the economic and political climate, restriction on currency repatriation or other developments in the law or regulations of the countries in which the target fund invests. For example, the deteriorating economic condition of such countries may adversely affect the value of the investments undertaken by the target fund in those affected countries. This in turn may cause the NAV of the target fund or prices of units to fall.

## RISKS (CONTINUED)

All investment carries some form of risks. The potential key risks include but are not limited to the following:

### Currency risk

As the investments of the target fund may be denominated in currencies other than the base currency, any fluctuation in the exchange rate between the base currency and the currencies in which the investments are denominated may have an impact on the value of these investments. You should note that any gains or losses arising from the fluctuation in the exchange rate may further increase or decrease the returns of the investment.

#### Currency risk at the target fund level

The impact of the exchange rate movement between the base currency of the target fund and the currency of the underlying investments (other than in MYR) may result in a depreciation of the value of the investments as expressed in the base currency of the target fund.

### Regulatory risk

The investments of the target fund would be exposed to changes in the laws and regulations in the countries the target fund is invested in. These regulatory changes pose a risk to the target fund as it may materially impact the investments of the target fund. In an effort to manage and mitigate such risk, the fund manager seeks to continuously keep abreast of regulatory developments (for example, by closely monitoring announcements on regulators' website and mainstream media) in that country. The fund manager may dispose its investments in that particular country should the regulatory changes adversely impact the policy owners' interest or diminish returns of the target fund.
