FUND MANAGER'S COMMENTS

The Fund (Class MYR) increased by 2.28% during the month of May 2021, underperforming the benchmark by 33bps.

Despite the rising inflation concerns that Fed might have to tighten earlier due to positive economic data surprises, developed markets were able to gain higher with S&P 500 Index, MSCI Europe Index and MSCI Japan index rising by 1.76%, 5.81% and 3.44% respectively in MYR term. US Dollar and Japanese Yen appreciated by 1.6% and 0.3% whereas the Euro depreciated by 1.7%. The US 10-year bond yield retreated to 1.5704% at the time of writing.

Fundamentals are positive for developed markets. US and Europe manufacturing PMIs continue to rebound higher with faster vaccination rollout and ease of restrictions. Japan PMI is edging slightly lower due to the recent announced state of emergencies and movement restrictions. However, it's showing resilience and is expected to recover as Japan vaccine rollout gathers pace with more vaccines approved, large inoculation centers opened and contracts to acquire more doses of vaccines secured by the government. The 12m forward corporate earnings are revised higher for all developed markets led by US (+4.2%) and Europe (+4.7%). Core PCE rose by 3.1% in April compared to last year and 0.7% higher the past month, both higher than expectation. Wage is rising higher due to labor shortage. However, May nonfarm payrolls is slightly lower than expectations. Unemployment rate fell to 5.8% but labor force participation rate also fell to 61.6%. The Fed has indicated reluctance to start tapering earlier as they see the short-term inflation being transitory and there is still a long way to reach full-employment. Both ECB and BOJ has also indicated no major shift in monetary policy in the foreseeable future.

We maintain overweight in all developed markets as we think the global economy would continue its recovery over the next 12 months with the continued rollout of vaccines and fiscal & monetary policy support. Despite the rising inflation expectations in the near term, we think central banks will stay accommodative until the economy recovery trajectory is ensured, full employment and inflation target is achieved. We are most overweight in Europe as the vaccine rollouts are catching up with US after a slow start and the economies would be positioned for a growth rebound, particularly in the services sector when movement restrictions are eased.

RISKS

All investment carries some form of risks. The potential key risks include but are not limited to the following:

Market risk	Market risk refers to the possibility that an investment will lose value because of a general decline in financial markets, due to economic, political and/or other factors, which will result in a decline in the target fund's NAV.
Stock specific risk	Prices of a particular stock may fluctuate in response to the circumstances affecting individual companies such as adverse financial performance, news of a possible merger or loss of key personnel of a company. Any adverse price movements of such stock will adversely affect the target fund's NAV.
Country risk	Investments of the target fund in any country may be affected by changes in the economic and political climate, restriction on currency repatriation or other developments in the law or regulations of the countries in which the target fund invests. For example, the deteriorating economic condition of such countries may adversely affect the value of the investments undertaken by the target fund in those affected countries. This in turn may cause the NAV of the target fund or prices of units to fall.
Currency risk	As the investments of the target fund may be denominated in currencies other than base currency, any fluctuation in the exchange rate between the base currency and the currencies in which the investments are denominated may have an impact on the value of these investments. You should be aware that if the currencies in which the investments are denominated depreciate against the base currency, this will have an adverse effect on the NAV of the target fund and vice versa. You should note that any gains or losses arising from the fluctuation in the exchange rate may further increase or decrease the returns of the investment.
Fund manager's risk	Since the target fund invests into collective investment scheme managed by another manager, the fund manager has absolute discretion over the fund's investment technique and knowledge, operational controls and management. In the event of mismanagement of the fund and/or the management company, the NAV of the target fund, which invests into the fund would be affected negatively. Although the probability of such occurrence is minute, should the situation arise, Principal (S) will seek for an alternative collective investment scheme that is consistent with the objective of the target fund.

RISKS (CONTINUED)

All investment carries some form of risks. The potential key risks include but are not limited to the following:

Credit and default risk

Investments of the target fund may involve a certain degree of credit and default risk. Generally, credit and default risk is the risk of loss due to the counterparty's and/or issuer's non-payment or untimely payment of the investment amount as well as the returns on investment. Principal (S) aims to mitigate this risk by performing fundamental credit research and analysis to determine the creditworthiness of its counterparty and/or issuer.
