FUND MANAGER'S COMMENTS

- Global equities rose in October, with the MSCI AC World index up 5.1% supported by strong US equity performance, which saw the S&P 500 hit fresh all time highs. Market sentiment was fueled by robust 3Q 2021 earnings result which had beat expectations.
- Local equity markets treaded cautiously with the FBM100 index closing 1.7% higher as investors' attention turned to Budget 2022, touted as Malaysia's largest budget to date to support the country's recovery from the prolonged effects of the pandemic.
- Markets were surprised by an announced one-off tax (Cukai Makmur) for companies with super profits in 2022. This will raise the corporate tax for companies earning above RM100million in pre-tax profit from 24% to 33%. The hardest hit sectors could be financials, telcos, utilities, and glove companies.
- ESG issues continued to hamper the glove sector – the US Customs & Borders Protection issued a ban to a few glove company's products due to alleged labor issues.
- Key commodities prices moved higher as Crude Palm Oil hovered around RM5,000 per ton levels and Oil closing at US\$85 per barrel. This contributed to meaningful foreign inflow to sectors such as Banks, Oil & Gas, and even Property, which has been a laggard for 2021.

STRATEGY:

- The fund's invested levels was increased to 96% during the month. The fund remains positioned in quality large-cap Shariah-compliant stocks in the domestic market.
- Markets were surprised by the announced one-off prosperity tax (Cukai Makmur) for companies that earned super profits in 2022. Local stocks could see some short-term weakness as markets adjust to the impact of the prosperity tax as earnings growth outlook becomes muted. Corporates might also be incentivised to report lower profits in 2022 to minimise the tax burden.
- Local equities had been one of the worst performing market in the region after HK/China - limited downside at current level. We look to remain highly invested, riding through near term volatility from any knee jerk reactions to the prosperity tax.
- The relatively high vaccination rates is encouraging, and with new Covid cases trending lower, further easing of restrictions are gradually being announced. This bodes well for economic activities. We are well positioned for this with a focus on by recovery beneficiaries (e.g. banks, consumer).
- We are positive on fixed line telco names following various digitalisation initiatives, covering 5G rollout and migration to cloud. We also favour exporters, particularly tech and EMS companies riding on secular growth trends and benefits from the US-China trade divergence.

RISKS

All investment carries some form of risks. The potential key risks include but are not limited to the following:

Market risk	Market risk arises because of factors that affect the entire marketplace. Factors such as economic growth, political stability and social environment are some examples of conditions that have an impact on businesses, whether positive or negative. Market risk cannot be eliminated by diversification. It stems from the fact that there are economy-wide perils which threaten all businesses. Hence, investors will be exposed to market uncertainties and no matter how many Shariah-compliant securities are held, fluctuations in the economic, political and social environment will affect the market price of the Shariah-compliant investments either in a positive or negative way.
Fund management risk	This risk refers to the day-to-day management of the target fund by Affin Hwang which will impact the performance of the target fund. For example, investment decisions undertaken by Affin Hwang as a result of an incorrect view of the market or any non-compliance with internal policies, investment mandate, the deed, relevant law or guidelines due to factors such as human error, fraudulence, dishonesty or weaknesses in operational process and systems, may adversely affect the performance of the target fund.
Performance risk	There is no guarantee in relation to the investment returns.
Inflation risk	This is the risk that your investment in the target fund may not grow or generate income at a rate that keeps pace with inflation. This would reduce your purchasing power even though the value of the investment in monetary terms has increased.
Liquidity risk	Liquidity risk arises in two scenarios. The first scenario is where the target fund's investment cannot be sold due to unavailability of a buyer for that investment. The second scenario exists where the target fund's investment, by its nature, is thinly traded. This will have the effect of causing the target fund's investment to be sold below its fair value which would adversely affect the NAV of the target fund.
Credit/Default risk	Credit risk relates to the creditworthiness of the issuers of the investment (Islamic money market instruments) and their expected ability to make timely payment of interest and/or principal. Any adverse situations faced by the issuers may impact the value as well as liquidity of the investment. In the case of rated investments, this may lead to a credit downgrade. Default risk relates to the risk of an issuer of the investment either defaulting on payments or failing to make payments in a timely manner which will in turn adversely affect the value of the investment. This could adversely affect the value of the target fund.
Equity investment risk	This is the risk associated with investing in a particular equity. The value of individual equity is mainly determined by its potential growth in earnings, sound management, and treatment of minority shareholders, as well as a myriad of other factors. Failure to achieve these would result in declining investment value which in turn affects the performance of the target fund. This can be mitigated by diversifying the target fund's portfolios.

RISKS (CONTINUED)

Reclassification of Shariah status risk

This risk refers to the risk that the currently held Shariah-compliant securities by the target fund may be reclassified to be Shariah non-compliant in the periodic review of the equities by the Shariah Advisory Council of the Securities Commission Malaysia (SACSC), the Shariah Adviser for the target fund or the Shariah boards of the relevant Islamic indices.

If this occurs, Affin Hwang will take the necessary steps to dispose of such equities. There may be opportunity loss to the target fund due to the target fund not being allowed to retain the excess capital gains derived from the disposal of the Shariah non-compliant equities. Affin Hwang will be required to dispose of these equities immediately if the prices are above the purchase price. Should the prices be below the purchase price, Affin Hwang may choose to hold on to these holdings until the prices meet the purchase price. Nevertheless, should Affin Hwang decide to dispose of these equities below the purchase price, the target fund will be faced with the risk of realising its losses, thus negatively impacting the NAV of the target fund.

Shariah-compliant warrants investment risk

The value of the Shariah-compliant warrants (“warrants”) will depend on the pricing of the underlying security whereby the growth and performance prospect of the underlying security would consequentially affect the value of the warrants. In addition, the value of the warrants may decrease exponentially as the warrants approach its maturity date and the potential gains from a favourable price movement of the underlying security may be offset by aggressive time decay. Affin Hwang may consider unwinding these warrants if there are material adverse changes to its value with the aim to mitigate the risk.
