FUND MANAGER'S COMMENTS

- Bond yields moved higher in August amidst tight labour market, stronger than expected economic growth and concern on revision of Bank of Japan's (BOJ) yield curve control. 10YUS treasury yields closed the month at 4.1%.
- Softer job data released may signal that labour market conditions are easing. Unemployment rate rose from 3.5% to 3.8% in August on the back of a higher labour force participation. Wage growth also came below forecasts with average hourly earnings rising modestly at 0.20% for the month and 4.30% from a year ago.
- With the expectation of softening inflationary pressures, and as the US Fed Chair Powell explicitly pointed out in Jackson Hole Economic Symposium 2023 that they see the current stance of policy as restrictive and sufficient in putting downward pressure on economic activity, hiring, and inflation, there is a possibility that the Fed Fund rate will be on hold for the remaining of 2023.
- Bond yields in Malaysia was relatively mixed as longer tenor government bond yields rose while shorter tenors fell slightly. Foreign investors preferred short-term papers for currency positioning, while local investors focused on long-dated papers as yields rose, resulting in a flatter MGS yield curve.

STRATEGY:

- US economic data continue to send mixed signals, leading to an increased conviction that the US may avoid a recession in 2023 and move towards a soft landing. On another hand, it is expected that Fed may pause its hiking cycle in 2023 as inflationary pressure cools.
- The Fund looks to maintain current duration positioning, nibbling in some short-dated government bonds and high quality perpetual bonds.
- Prefer IG bonds, which could be defensive and provide positive returns as global growth slows (and potentially recessions in various DM countries).
- The Fund will maintain smaller exposure to High Yield bonds as a slowdown in global growth could lead to more liquidity and credit rating downgrades. The Fund held close to zero exposure in China property sector as recovery expected to be slow despite policy support.
- The Fund will continue to maintain current high exposure to MYR bonds due to attractive yields.

RISKS

All investment carries some form of risks. The potential key risks include but are not limited to the following:

Market risk	Market risk refers to the possibility that an investment will lose value because of a general decline in financial markets, due to economic, political and/or other factors, which will result in a decline in the target fund's NAV.
Liquidity risk	Liquidity risk refers to two scenarios. The first scenario is where an investment cannot be sold due to unavailability of a buyer for that investment. The second scenario exists where the investment, by its nature, is thinly traded. This will have the effect of causing the investment to be sold below its fair value which would adversely affect the NAV of the target fund.
Credit and default risk	Credit risk relates to the credit worthiness of the issuers of the bonds or money market instruments ("Investment") and their expected ability to make timely payment of interest and/or principal. Any adverse situations faced by the issuer may impact the value as well as liquidity of the Investment. In the case of rated investment, this may lead to a credit downgrade. Default risk relates to the risk of an issuer of the Investment either defaulting on payments or failing to make payments in a timely manner which will in turn adversely affect the value of the Investment. This could adversely affect the value of the target fund.
Interest rate risk	This risk refers to the impact of interest rate changes on the valuation of bonds or money market instruments ("Investment"). When interest rates rise, the investment prices generally decline and this may lower the market value of the Investment. The reverse may apply when interest rates fall.
Currency risk	<p>As the Investments of the target fund may be denominated in currencies other than the base currency, any fluctuation in the exchange rate between the base currency and the currencies in which the investments are denominated may have an impact on the value of these investments. Investors should note that any gains or losses arising from the fluctuation in the exchange rate may further increase or decrease the returns of the investment.</p> <p><u>Currency risk at the target fund level</u> The impact of the exchange rate movement between the base currency of the target fund and the currency of the underlying investments may result in a depreciation of the value of the investments as expressed in the base currency of the target fund.</p>

RISKS

All investment carries some form of risks. The potential key risks include but are not limited to the following:

Structured products risk

The NAV of the target fund will be impacted by the valuation of the structured product. Factors that may impact the valuation of the structured products will include, but not be limited to movement of the underlying assets, volatility of the underlying assets, interest rate levels, the correlation of the underlying assets and other such factors. Any change in the aforesaid factors would either positively or negatively impact the valuation of the structured products, hence impacting the NAV of the target fund. As such, the target fund's NAV will be exposed to potential price volatility, which will be dependent on the valuation of the structured products that the target fund invested in.

Country risk

Investments of the target fund in any country may be affected by changes in economic and political climate, restriction on currency repatriation or other developments in the law or regulations of the countries in which the target fund invests. For example, the deteriorating economic condition of such countries may adversely affect the value of the investments undertaken by the target fund in those affected countries. This in turn may cause the NAV of the target fund or prices of units to fall.

Regulatory risk

The investments of the target fund would be exposed to changes in the laws and regulations in the countries the target fund is invested in. These regulatory changes pose a risk to the target fund as it may materially impact the investments of the target fund. In an effort to manage and mitigate such risk, the fund manager seeks to continuously keep abreast of regulatory developments (for example, by closely monitoring announcements on regulators' website and mainstream media) in that country. The fund manager may dispose its investments in that particular country should the regulatory changes adversely impact the investors' interest or diminish returns to the target fund.
