

### FUND OBJECTIVE

To provide a mixed exposure into equities and bonds, with higher allocation in bonds.

### INVESTMENT STRATEGY & APPROACH

The fund will feed into Sun Life Malaysia Growth Fund and Sun Life Malaysia Conservative Fund according to a predefined asset allocation.

The Sun Life Malaysia Growth Fund combines a top down asset and sector allocation process with a bottom-up stock selection process. The asset allocation process is made after a review of macroeconomic trends in Malaysia and for the major economies. In particular, we consider the direction of GDP growth, interest rates, inflation, currencies and government policies. We next assess their impact on the various sectors, together with sector specific parameters to predict any discernible trends or themes. These trends or themes form the basis of our sector selection. Stock selection is based upon improving fundamentals and attractive relative valuations. Rising investor sentiment is an additional criterion. While we use a number of valuation methodologies, the price-earnings ratio is still preferred.

For the Sun Life Malaysia Conservative Fund, the strategy will be reviewed periodically based on the country's economic and bond outlook. We will adopt an active trading strategy and will be especially selective in buying and selling of securities for the Fund. We formulate an interest rate outlook through examining factors such as the Malaysian inflation rate, monetary policies and economic growth. With an interest rate outlook and yield curve analysis, we identify the weighting of the investment tenure and credit rating for the Fund. As part of the risk management strategy, the Fund is constructed and managed within the predetermined guidelines. Essentially, we monitor the bond portfolio according to duration, credit ratings and sector.

### FUND DETAILS

Launch Date	20 October 2008	Domicile	Malaysia
Currency	Ringgit Malaysia	Launch Price	RM1.0000
Units in Circulation	1.13 million units (30 September 2024)	Fund Size	RM2.07 million (30 September 2024)
Unit NAV	RM1.8325 (30 September 2024)	Performance Benchmark	25% FBM100 + 75% 12 month FD

## FUND MANAGER'S COMMENTS

In September 2024, the Fund's performance increased by 0.30%, outperforming the benchmark by 0.48%.

After hitting a 5-year high, the KLCI settled 1.8% lower in September on the back of profit taking. This was in stark contrast to the stronger US market which recorded new highs following Fed's 50bps cut during the month and greater confidence of a soft landing scenario for the US economy. Most sectors were down except for Construction, Property and Healthcare, with Energy and Tech sold off the most.

Malaysia's manufacturing sector moderated in September with a PMI reading of 49.5 pts vs 49.7 pts in the previous month. S&P Global noted flat new order growth which contributed to lower production, while purchasing activity and inventories were scaled back further. Encouragingly, employment showed an uptick while inflationary pressures also eased, potentially due to the stronger Ringgit. Optimism of a recovery in new orders over the coming 12 months rose to a YTD high. The latest PMI data suggests 3Q24 GDP growth momentum could sustain at a similar pace as the preceding quarter, which was at 5.9%. To recap, BNM projects GDP to grow 4-5% in 2024.

The Malaysian Government Securities ("MGS") yield curve shifted lower in September, with the 10-year yield compressing by 5bps, while both short-term and long-term yields remained relatively unchanged by the end of the month. The 3-, 5-, 7-, 10-, 15-, 20- and 30-year benchmarks closed at 3.36% (-1bps), 3.51% (-1bps), 3.70% (-2bps), 3.72% (-5bps), 3.90% (-1bps), 4.04% (-2bps) and 4.20% (-1bps) respectively in September.

Bank Negara Malaysia ("BNM") kept the overnight policy rate ("OPR") unchanged at 3.00% at its September meeting while noting that the current rate is supportive of economic growth and aligns with their inflation and growth outlook. The central bank emphasized a neutral monetary stance but remain watchful of domestic and inflationary trends heading into 2025.

**RISKS**

All investment carries some form of risks. The potential key risks include but are not limited to the following:

<b>Market risk</b>	<p>Market risk is the risk of negative movement that affects the price of all assets in a particular capital market. The factors influencing the performance of the markets include:</p> <ul style="list-style-type: none"><li>• Economic and financial market conditions</li><li>• Political change</li><li>• Broad investor sentiment</li><li>• Movements in interest rate and inflation</li><li>• Currency risks</li></ul> <p>Stock and/or securities values fluctuate in response to the activities and performance of individual companies and general market or economic conditions. Such movements in the underlying values of the share of the investment portfolio will cause the NAV or prices of units to fall as well as rise. Market risk is mitigated through careful selection of securities and diversification through spreading of risk across a basket of assets and/or sectors.</p>
<b>Interest rate risk</b>	<p>Interest rates are inclined to fluctuate over time. A rise in the general level of interest rates will result in a decline of the value of all bonds and fixed interest securities. Hence a bond fund's NAV will most probably decrease with the rise of interest rates. Maintaining an appropriate diverse mix of assets with different yield and maturity profiles will lessen the impact of interest rate risk.</p>
<b>Liquidity risk</b>	<p>Liquidity risk is defined as the ease with which a security can be sold at or near its fair value depending on the volumes traded on the market. Liquidity risk is mitigated through the selection of stocks with an active trading volume in the open market. This ensures that exit strategies can be executed with little/minimal impacts to price fluctuations.</p>
<b>Company or security specific risk</b>	<p>There are many specific risks, which apply to individual companies or securities. Examples include the possible effect on a company of losing a key executive or the unforeseen entry of a new competitor into the market. The risk is mitigated by conducting in-house periodic reviews and analysis. In-house analysis is then supplemented by periodic reviews from rating agencies and market analysts.</p>
<b>Credit risk</b>	<p>Credit risk refers to an issuer's ability to make timely payments of profit and principal. In the event that the issuer of the instrument is faced with financial difficulties, leading to a decrease in their credit worthiness (i.e Bond prices will change/drop in the event of rating downgrade) and default in the payment of profit and principal, the value of the fund may be adversely affected. Credit risk is mitigated by conducting in-house periodic reviews and analysis. In-house analysis is then supplemented by periodic reviews from rating agencies and market analysts.</p>
