FUND MANAGER'S COMMENTS

The Fund was down 8.06% in MYR terms in October, underperforming the benchmark by 14bps. YTD, the Fund is down 10.76%, underperforming the benchmark by 147bps.

Developed markets rebounded in October with S&P 500 Index, MSCI Europe and MSCI Japan increased by 8.1%, 6.2% and 5.7% MTD in local currency terms. The US Dollar ended the month flat. BOJ intervened as Japanese Yen depreciated to 150. US 10-year bond yield increased to 4.07% at the time of writing.

Economic growth continues to weaken across all developed markets as reflected by weaker manufacturing PMI. However, US job market cooled down slightly but remain resilient with Sep Non-farm Payrolls at 263k. Manufacturing PMI slowed down to 50.4. Housing starts declined by 8.1%, which means the US housing market continues to cool down. The probability of recession is higher in Europe as the region's Manufacturing PMI continue to weaken to 46.4. Japan Manufacturing PMI was holding up at 50.7, little changed from the previous month. On the other hand, inflation remains high in US and Europe, which means the Fed, ECB and BOE will bring forward more rate hikes. Forward 12-month corporate earnings are revised down for US but remained flat for Europe and Japan. Earnings downgrades are more broad-based in US. Europe earnings were supported by Financials, Consumer Discretionary and Utilities sectors. Our in-house midcycle P/E valuation indicates US valuation has become favorable. Japan and Europe valuations remain cheap.

We remain Overweight US expecting the high-quality growth stocks continue to outperform if inflation eases meaningfully. If this happens, the valuation of growth stocks may be supported as their valuation has become more favorable. We bring Japan to Slight Overweight as we see corporate earnings stay resilient supported by weaker Yen and economic reopening. Inflation is relatively muted in Japan and monetary policy is accommodative. We maintain Neutral allocation in Europe as the risk of economic slowdown is higher and earnings outlook has been weak. Our underlying funds have focused on investing in quality companies with growth and earnings visibility, at reasonable valuation. Moving forward, Fed's monetary tightening path and whether economy would have a soft or hard landing, as well as the recent US-China conflict may continue to weigh on equity markets.

RISKS

All investment carries some form of risks. The potential key risks include but are not limited to the following:

Market risk	Market risk refers to the possibility that an investment will lose value because of a general decline in financial markets, due to economic, political and/or other factors, which will result in a decline in the target fund's NAV.
Stock specific risk	Prices of a particular stock may fluctuate in response to the circumstances affecting individual companies such as adverse financial performance, news of a possible merger or loss of key personnel of a company. Any adverse price movements of such stock will adversely affect the target fund's NAV.
Country risk	Investments of the target fund in any country may be affected by changes in the economic and political climate, restriction on currency repatriation or other developments in the law or regulations of the countries in which the target fund invests. For example, the deteriorating economic condition of such countries may adversely affect the value of the investments undertaken by the target fund in those affected countries. This in turn may cause the NAV of the target fund or prices of units to fall.
Currency risk	As the investments of the target fund may be denominated in currencies other than base currency, any fluctuation in the exchange rate between the base currency and the currencies in which the investments are denominated may have an impact on the value of these investments. You should be aware that if the currencies in which the investments are denominated depreciate against the base currency, this will have an adverse effect on the NAV of the target fund and vice versa. You should note that any gains or losses arising from the fluctuation in the exchange rate may further increase or decrease the returns of the investment.
Fund manager's risk	Since the target fund invests into collective investment scheme managed by another manager, the fund manager has absolute discretion over the fund's investment technique and knowledge, operational controls and management. In the event of mismanagement of the fund and/or the management company, the NAV of the target fund, which invests into the fund would be affected negatively. Although the probability of such occurrence is minute, should the situation arise, Principal (S) will seek for an alternative collective investment scheme that is consistent with the objective of the target fund.

RISKS (CONTINUED)

All investment carries some form of risks. The potential key risks include but are not limited to the following:

Credit and default risk

Investments of the target fund may involve a certain degree of credit and default risk. Generally, credit and default risk is the risk of loss due to the counterparty's and/or issuer's non-payment or untimely payment of the investment amount as well as the returns on investment. Principal (S) aims to mitigate this risk by performing fundamental credit research and analysis to determine the creditworthiness of its counterparty and/or issuer.
