FUND MANAGER'S COMMENTS

The Fund rose by 11.23% during the month, outperforming the benchmark by 3.01ppt.

Global equities collectively declined in May 2023 amidst investor concerns that persistent inflation combined with robust employment and strong wage growth in many regions, particularly Europe and the United States, could lead their central banks to further tighten monetary policy and hurt economic growth. IT equities were led higher by a powerful rally in semiconductor and chip fabrication equipment makers, which extended their run as 2023's top-performing industry group, while interactive media and services names were the month's standouts in communication services and the second best-performing industry year to date.

A key risk we are monitoring includes quantifying IT demand "pull forward" during the COVID pandemic. While a US recession would have a negative impact on enterprise software, hardware/capex (capital expenditures) and services, we think the digestion of pull-forward spend that occurred in 2020–2022 could exacerbate the pace of deceleration in 2023 and perhaps impact 2024 as well. We expect this to be less impactful to platform businesses that provide essential functionality and clear productivity increases. Other risks we are monitoring include the aforementioned collapse of select US regional banks and the impact on technology-related and financial services industries.

In our long-term view, the most important aspect is still "quality," which we define as companies with strong, improving competitive positions, experienced/talented management teams with a proven track record of execution, premium-level financial strength and strong unit economics—along with an awareness about the costs they are imposing on the environment and society, adding to signs that an appropriate corporate governance structure is in place.

RISKS

All investment carries some form of risks. The potential key risks include but are not limited to the following:

Returns not guaranteed	The investment of the target fund is subject to market fluctuations and its inherent risk. There is NO GUARANTEE on the investment returns, nor any assurance that the target fund's investment objective will be achieved.
Market risk	The value of an investment will decrease or increase due to changes in market factors i.e. economic, political or other events that impact large portions of the market. Market risk cannot be eliminated, hence the target fund's investment portfolio may be prone to changing market conditions that may result in uncertainties and fluctuations in the value of the underlying of the target fund's investment portfolio, causing the NAV or prices of units to fluctuate.
Inflation risk	This is the risk of your investment in the target fund not growing or generating income at a rate that keeps pace with inflation. This would reduce your purchasing power even though the nominal value of the investment in monetary terms has increased.
Currency risk	Currency risk is applicable to class(es) (e.g. Class MYR) which is in a different currency than the base currency of the Fund (i.e. USD). The impact of the exchange rate movement between the base currency of the fund and the currency denomination of the respective classes may result in a depreciation of the value of your holdings as expressed in the base currency. As for the hedged class, the class itself provides mitigation to the currency risk arising from the difference between the currency denomination of the class and the base currency. While Principal aims to fully hedge the currency risk for a hedged class, you should note that it may not entirely eliminate currency risk. In addition, as a result of hedging, a hedged class will not be able to enjoy the full benefits of the currency movement in the event of a favourable movement of the currency denomination of the hedged class against the base currency of the fund. You should also note that hedging incurs costs which will impact the NAV of a hedged Class.
Manager's risk	Since the target fund invests into a collective investment scheme (CIS) managed by another manager, the master fund's manager has absolute discretion over the target fund's investment technique and knowledge, operational controls and management. In the event of mismanagement of the master fund, the NAV of the target fund, which invests into the master fund would be affected negatively.
Country risk	As the target fund invests in the master fund which is domiciled in Luxembourg, the target fund's investments in the master fund may be affected by risks specific to Luxembourg. Changes to laws and regulations of Luxembourg may have an adverse impact on the master fund, and consequently the target fund.

RISKS (CONTINUED)

All investment carries some form of risks. The potential key risks include but are not limited to the following:

Biotechnology, Communication and Technology Sectors risk

Investment in the biotechnology, communication and technology sectors may present a greater risk and a higher volatility than investment in a broader range of securities covering different economic sectors. In addition, these sectors may be subject to greater government regulation than other sectors and, as a result, changes to such government regulation may have a material adverse effect on these sectors. Such investments may therefore drop sharply in value in response to market, regulatory or research setbacks in addition to possible adverse effects from the competition of new market entrants, patent considerations and product obsolescence. Particularly within technology, short product cycles and diminishing profit margins are additional factors to consider when investing.
